This accessible, hands-on text not only introduces students to the important topics in historical linguistics but also shows them how to apply the methods described and how to think about the issues; abundant examples and exercises allow students to focus on how to do historical linguistics. Distinctive to this text is its integration of the standard topics with others now considered important to the field, including syntactic change, grammaticalization, sociolinguistic contributions to linguistic change, distant genetic relationships, areal linguistics, and linguistic prehistory. Examples are taken from a broad range of languages; those from the more familiar English, French, German, and Spanish make the topics more accessible, while those from non-Indo-European languages show the depth and range of the concepts they illustrate. This second edition features expanded explanations and examples as well as updates in light of recent work in linguistics, including a defense of the family tree model, a response to recent claims on lexical diffusion/frequency, and a section on why languages diversify and spread.

Even though Specific Reading Disability (Dyslexia) has been clinically recognized as a developmental learning disorder for nearly a hundred years. only within the past two decades it has become the subject of major experimental investigation. Because, by definition, dyslexic children are of average or superior intelligence. it is often suspected that some arcane feature of the written language is responsible for the inordinate difficulty experienced by these children in learning to read. The occasional claim that developmental dyslexia is virtually nonexistent in some languages coupled with the fact that languages differ in their writing systems has further rendered orthography a subject of serious investigation. The present Volume represents a collection of preliminary reports of investigations that explored the relationship between orthography and reading disabilities in different languages. Even though not explicitly stated. these reports are concerned with the question whether or not some orthographies are easier to learn to read and write than others. One dimension on which orthographies differ from each other is the kind of relationship they bear to pronunciation. The orthographies examined in this book range from the ones that have a simple one-to one grapheme-phoneme relationship to those which have a more complex relationship.

Suggesting that the contention that phonemic awareness must be taught directly and that children need explicit systematic instruction in phonics is less of a scientific "fact" than an exercise in political persuasion, this book presents the story of the political campaign that is taking place to change the minds of Americans about how young children learn to read. The book begins with a close look at the empirical research being used to support a massive shift in the national understandings about language, literacy, and learning and concludes by revealing the ways in which research studies on early reading instruction are being used by the federal and state governments to support a new methodology that has turned early reading instruction into "a massive business of unprecedented commercial worth." The chapters in the book are: (1) In Which We Are Told Training in Phonemic Awareness Is the Key to Reading Success; (2) In Which Phonemic Awareness Research Is Analyzed from an Experimental Psychological Perspective; (3) In Which Phonemic Awareness Research Is Analyzed from a Sociocultural Perspective; (4) In Which We Find Foorman's Research Does Not Support the NICHD [National Institute of Child Health and Human Development] Proposition That "Phonological Processing Is the Primary Area Where Children with Reading Difficulties Differ from Other Children"; (5) In Which Teachers Are Turned into Clerks and We Discuss Power, Privilege, Racism and Hegemony; (6) In Which Governor Bush's Business Council Holds a Pre-Summit Meeting in Texas; (7) In Which We Have an "If-They-Say-It's-So-It-Must-Be-So" Attitude toward Experimental Research; (8) In Which the Kindergarten Children in North Carolina Are No Longer Expected To Try To Read and Write; (9) In Which I Become the Documentation on Which I Build My Case; (10) In Which We Are Told That in America We Are All Equal. Are We or Aren't We?; (11) In Which We Find the Desks and Chairs Are Broken and the Toilets Don't Work; (12) In Which We Ask: Do You Think America Likes Children?; (13) In Which We Consider If We Are Comfortable Mandating Reading Programs based on Neuroimaging Research and Genetic Studies of Reading Disabilities; (14) In Which California Politically Reinvents How Young Children Learn To Read; (15) In Which California Ends Local Control and the State Board of Education Leads the Jihad; and (16) In Which We Enter the Central Chamber of the Hegemonic Labyrinth. (Contains approximately 250 references; an appendix that offers a response to preliminary statistical analyses used to support the nationally publicized findings of the NICHD Houston reading studies, and an appendix that offers "late-breaking" news about the NICHD Houston reading studies are attached.)
