DEAD BEFORE DYING

Sentient Publications

Psychosomatics have classically been of peripheral importance within our wellknown theoretical models, despite the fact that they do have a history in the field of psychoanalysis. This might be owing to the fact that Freud did not explicitly approach psychosomatics and, in consequence, did not put forward any hypotheses within his theoretical body. However, the Freudian concepts of actual neuroses and mixed neuroses are a basis in order to understand psychosomatic phenomena. The

same could be said about the connections established with subsequent Freudian theoretical models, such as: the introduction of narcissism, unresolved mourning processes, early trauma and the action of Thanatos.

First published in 1976, *People of the Eland* was the first major step away from the outsiders view upon San rock art that had dominated studies of rock art for nearly a century. The book provides an account of the rock art of the Drakensberg Range and historical information on the mountain San themselves. The book aims to gain an insiders view of the rock art using San understandings of the world. While following this approach, it quickly became clear to Patricia Vinnicombe that the art was very far from simple depictions of daily life as had once seemed likely, but instead reflected the most deeply held San beliefs and symbols. This approach and this understanding has now become the standard for all those working with San rock art. Whilst this early knowledge of San art has been built upon considerably since 1976, *People of the Eland* remains a cornerstone of our current understanding. Reprinted here in full color, with the original artwork and photographs, *People of the Eland* remains a seminal work, the impact of which cannot be underestimated.

Educational Psychology Series: *Evaluating the Quality of Learning: The SOLO Taxonomy (Structure of the Observed Learning Outcome)* focuses on the approaches, methodologies, and techniques employed in the valuation of the quality of learning. The publication first offers information on the quality and quantity of learning and origin and description of the Structure of the Observed Learning Outcome (SOLO) taxonomy. Discussions focus on general intellectual development and the growth of quality; some assumptions and applications of stage theory; from developmental stage to levels of learning quality; and general intellectual development and the growth of quality. The text then examines the teaching of history, elementary mathematics, English, and geography. Topics include interpreting a map and drawing conclusions, explaining a natural phenomenon, appreciation of poetry, implications for the teaching of history, English, and mathematics, numbers and operations, and general application of SOLO to history. The manuscript takes a look at modern languages, place of the taxonomy in instructional design, and some methodological considerations. Concerns include alternative formats for obtaining SOLO responses, instructional processes, curriculum analysis,

remediation, and teacher intentions. The publication is a vital source of data for educators interested in the SOLO taxonomy.

Frogs (New & Updated Edition) Harcourt Brace Jovanovich

Definitive leadership strategy for fixing the American economy, drawn from Gallup's unmatched global polling and written by the company's chairman. What everyone in the world wants is a good job. "This is one of the most important discoveries Gallup has ever made," says the company's Chairman, Jim Clifton. In *The Coming Jobs War*, Clifton makes the bold assertion that job creation and successful entrepreneurship are the world's most pressing issues right now, outpacing runaway government spending, environmental degradation and even the threat of global terrorism. The book is grounded in findings from Gallup's World Poll, which reveals the implications of the jobs war on

everything from economics to foreign policy to nothing less than America's moral authority in the world. And it offers a prescription for attacking the jobs issue head-on. Clifton argues that the solution to creating good jobs must be found in cities, not in the federal government. Promoting entrepreneurship and job creation must be the sole mission and purpose of cities' business leaders, government officials and philanthropists. Clifton says that the next big breakthrough will come from the combination of the forces within big cities, great universities and powerful local leaders. Their combined effect is the most reliable, controllable and predictable solution to America's biggest problem. Strong leadership teams and a natural order are already in place within cities — in governments and local business and philanthropic entities, with caring leaders working on initiatives to fuel local economic growth and to create good jobs. The feat these leaders have to pull off is doubling their entrepreneurial energy by aligning their local forces: local tribal leaders, super mentors and universities. Winning the jobs war will require all hands on deck, and failure is not an option, especially for the United States, which has been the global leader in promoting freedom and entrepreneurship. America's place in the world is at stake, and there are other countries poised to surpass a sputtering U.S. economy that is currently growing at only 2% annually. The biggest threat? China, with a GDP that is increasing at nearly 10% annually — a pace that will make it the world's leading and most influential economy within the next 30 years. While the statistics are dire, Clifton remains optimistic about America's ability to win the jobs war because America has been here before. "The Greatest Generation saved America by beating the Japanese and Germans at [World War II]. The Baby Boomers saved America a second time by beating the same foes, Japan and Germany, in an economic war that determined the leadership of the free world, again," he says. The Coming Jobs War offers a clear, brutally honest look at America's biggest problem and a cogent prescription for solving it.

Based on two years of ethnographic fieldwork in an urban elementary school, this volume is an examination of how school division politics, regional economic policies, parental concerns, urban development efforts, popular cultures, gender ideologies, racial politics, and university and corporate agendas come together to produce educational effects. Unlike conventional school ethnographies, the focus of this work is less on classrooms than on the webs of social relations that embed schools in neighborhoods, cities, states, and regions. analytical styles, this volume: * explores how curriculum innovations are simultaneously made possible by and undermined by school district politics, neighborhood histories, and the spatial and temporal organizations of teachers' and parents' lives; * situates the educational discourse of administrators and teachers in the changing economic and political climates of the city; * analyzes the motivations behind an effort by school and business proponents to refashion classrooms within the school into business enterprises, and of children's efforts to make sense of the scheme; * examines the role of the school as a neighborhood institution, situating it at the intersections of city planners' efforts to regulate city space and children's efforts to carve out live spaces through out-of-school routines; * contemplates the meaning of school as a site for bodily experience, and looks at how patterns of space and control in the school shaped children's bodies, and at how they continued to use body-based languages to construct maturity, gender, and race; and * investigates the school as a space for the deployment of symbolic resources where children learned and constructed identities through their engagements with television, comic books, movies, and sports. Tangled Up In School raises questions about how we draw the boundaries of the school, about how schools fit into the lives of children and cities, and about what we mean when we talk about "school."
