Examines the culture and chronology of increasingly complex urban societies in western Anatolia during the Early Bronze Age. Bringing together expert voices and key case studies from well-

known and newly excavated sites, this book calls attention to the importance of western Anatolia as a legitimate, local context in its own right. The study of Early Bronze Age cultures in Europe and the Mediterranean has been shaped by a focus on the Levant, Europe, and Mesopotamia. Geographically, western Anatolia lies in between these regions, yet it is often overlooked because it doesn't fit neatly into existing explanatory models of Bronze Age cultural development and decline. Instead, the tendency has been to describe western Anatolia as a bridge between east and west, a place where ideas are transmitted and cultural encounters among different groups occur. This narrative has foregrounded discussions of outside innovations in the prehistory of the region while diminishing the role of local, endogenous developments and individual agency. The contributors to this book offer a counternarrative, ascribing a local impetus for change rather than a metanarrative of cultural diffusion. In doing so, they offer fresh observations about the chronology and delineation of regional cultural groups in western Anatolia; the architecture, settlement, and sociopolitical organization of the Early Bronze Age; and the local characteristics of material culture assemblages. Offering multiple authoritative studies on the archaeology of western Anatolia, this book is an essential resource for area research in western Anatolia, a key reference for comparative studies, and essential reading for college courses in the archaeology and anthropology of sociopolitical complexity, European and Mediterranean prehistory, and ancient Anatolia. Laura K. Harrison is Research Assistant Professor at the University of South Florida. In the Department of Archaeology at Dumlupinar University, Turkey, A. Nejat Bilgen is Professor and Asuman Kapuci is Assistant Professor.

This Color Atlas of Anatomy features full-color photographs of actual cadaver dissections, with accompanying schematic drawings and diagnostic images. The photographs depict anatomic structures with a realism unmatched by illustrations in traditional atlases and show students

specimens as they will appear in the dissection lab. Chapters are organized by region in order of standard dissection, with structures presented both in a systemic manner, from deep to surface, and in a regional manner. This edition has additional clinical imaging, including MRIs, CTs, and endoscopic techniques. New graphics include clinically relevant nerve and vessel varieties and antagonistic muscle functions. Many older images have been replaced with new, high-resolution images. Black-and-white dissection photographs have been replaced with color photography. A companion website will include an Image Bank, interactive software (similar to an Interactive Atlas), and full text online.

This comprehensive atlas is unique in combining information on the embryological development of the human with detailed presentation of the congenital malformations encountered in clinical practice. As a consequence it will not only assist practitioners and trainees in recognizing and evaluating malformations, but also enable them to understand how a malformation has developed and to explain the mystery of congenital malformations to relatives and patients. The book is organized according to anatomic region, with additional chapters on hernias, tumors, lymphogenesis and lymphatic malformations. According to WHO statistics, each year congenital anomalies result in approximately 3.2 million birth defect-related disabilities worldwide. All too often, however, training in embryology is now a neglected area, and medical graduates frequently lack confidence in their knowledge of the field. *Clinical Embryology: An Atlas of Congenital Malformations* will help to rectify this deficit and to ensure that malformations are comprehended and managed appropriately. It will be of value for postgraduate trainees in pediatric surgery, pediatrics, and neonatology, undergraduate medical students, and general practitioners/family physicians.
