Evolutionary Psychology as Maladapted Psychology SAGE  
Randy Larsen and David Buss dynamically demonstrate how scientists approach the study of personality in *Personality Psychology: Domains of Knowledge About Human Nature*. Major findings, both classical and contemporary, are presented in the context of six key domains—Dispositional, Biological, Intrapsychic, Cognitive/Experimental, Social and/Culture, and Adjustment—providing a foundation for the analysis and understanding of human personality.

**Human Evolutionary Psychology** McGraw-Hill Education  
Evolutionary Psychology Psychology Press  
*The Murderer Next Door* Prometheus Books

Why do men and women cheat on each other? How do men really feel when their partners have sex with other men? What worries women more -- men who turn to other women for love or men who simply want sexual variety in their lives? Can the jealousy husbands and wives experience over real or imagined infidelities be cured? Should it be? In this surprising and engaging exploration of men's and women's darker passions, David Buss, acclaimed author of *The Evolution of Desire*, reveals that both men and women are actually designed for jealousy. Drawing on experiments, surveys, and interviews conducted in thirty-seven countries on six continents, as well as insights from recent discoveries in biology, anthropology, and psychology, Buss discovers that the evolutionary origins of our sexual desires still shape our passions today. According to Buss, more men than women want to have sex with multiple partners. Furthermore, women who cheat on their husbands do so when they are most

likely to conceive, but have sex with their spouses when they are least likely to conceive. These findings show that evolutionary tendencies to acquire better genes through different partners still lurk beneath modern sexual behavior. To counteract these desires to stray -- and to strengthen the bonds between partners -- jealousy evolved as an early detection system of infidelity in the ancient and mysterious ritual of mating. Buss takes us on a fascinating journey through many cultures, from pre-historic to the present, to show the profound evolutionary effect jealousy has had on all of us. Only with a healthy balance of jealousy and trust can we be certain of a mate's commitment, devotion, and true love.

*Evolutionary Psychology* McGraw-Hill Ryerson

A "drop-dead shocker" (Washington Post Book World) that uses evolutionary psychology to explain human mating and the mysteries of love. If we all want love, why is there so much conflict in our most cherished relationships? To answer this question, we must look into our evolutionary past, argues prominent psychologist David M. Buss. Based on one of the largest studies of human mating ever undertaken, encompassing more than 10,000 people of all ages from thirty-seven cultures worldwide, *The Evolution of Desire* is the first work to present a unified theory of human mating behavior. Drawing on a wide range of examples of mating behavior — from lovebugs to elephant seals, from the Yanomamö tribe of Venezuela to online dating apps — Buss reveals what women want, what men want, and why their desires radically differ. Love has a central place in human sexual psychology, but conflict, competition, and manipulation also pervade human mating — something we must

confront in order to control our own mating destiny. Updated to reflect the very latest scientific research on human mating, this definitive edition of this classic work of evolutionary psychology explains the powerful forces that shape our most intimate desires.

*Personality Psychology: Domains of Knowledge About Human Nature* Penguin

Capturing a scientific change in thinking about personality and individual differences, this volume provides theories and empirical evidence which suggest that personality and individual differences are central to evolved psychological mechanisms and behavioural functioning.

**The Consuming Instinct** MIT Press

"Barbara M. Hobson . . . makes a compelling case for the reform of prostitution policy in . . . *Uneasy Virtue*. [This volume] demonstrates an effective analytical approach to understanding public policy and its impact on prostitution policy. . . . *Uneasy Virtue* proves particularly relevant today as right wing groups begin to guide discourse and influence policy around reproductive rights, sexuality and the future of gender equality. As Hobson proposes, the reform of prostitution policy must be viewed in the broader context of the political and economic struggles to emancipate women and thereby create a more rational society."—Samuel Suchowlecky, *Commentaries*

*Personality Psychology* MIT Press

In this highly informative and entertaining book, the founder of the vibrant new field of evolutionary consumption illuminates the relevance of our biological heritage to our daily lives as consumers. While culture is important, the author shows that

innate evolutionary forces deeply influence the foods we eat, the gifts we offer, the cosmetics and clothing styles we choose to make ourselves more attractive to potential mates, and even the cultural products that stimulate our imaginations (such as art, music, and religion). The book demonstrates that most acts of consumption can be mapped onto four key Darwinian drives—namely, survival (we prefer foods high in calories); reproduction (we use products as sexual signals); kin selection (we naturally exchange gifts with family members); and reciprocal altruism (we enjoy offering gifts to close friends). The author further highlights the analogous behaviors that exist between human consumers and a wide range of animals. For anyone interested in the biological basis of human behavior or simply in what makes consumers tick—marketing professionals, advertisers, psychology mavens, and consumers themselves—this is a fascinating read.

**Tarot by Design Workbook** Penguin

An eye-opening, mind-bending exploration of how mankind is reshaping its genetic future, based on the viral TED Talk series “Will Our Kids Be a Different Species?” and “The Next Species of Human.” Are you willing to engineer the DNA of your unborn children and grand-children to be healthier? Better looking? More intelligent? Why are rates of autism, asthma, and allergies exploding at an unprecedented pace? Why are humans living longer and having far fewer kids? Futurist Juan Enriquez and scientist Steve Gullans conduct a sweeping tour of how humans are changing the course of evolution for all species—sometimes intentionally, sometimes not. For example: • What if life forms are limited only by the bounds of our imagination? Are designer

babies and pets, de-extinction, even entirely newspecies fair game? • As humans, animals, and plants become ever more resistant to disease and aging, what will become the leading causes of death? • Man-machine interfaces may allow humans to live much longer. What will happen when we transfer parts of our “selves” into clones, into stored cells and machines? Though these harbingers of change are deeply unsettling, the authors argue we are also in an epoch of tremendous opportunity. Future humans, perhaps a more diverse, resilient, gentler, and intelligent species, may become better caretakers of the planet—but only if we make the right choices now. Intelligent, provocative, and optimistic, *Evolving Ourselves* is the ultimate guide to the next phase of life on Earth. Chosen by *Nature* magazine as a Fall 2016 season highlight.

Positive Evolutionary Psychology John Wiley & Sons

Was human nature designed by natural selection in the Pleistocene epoch? The dominant view in evolutionary psychology holds that it was—that our psychological adaptations were designed tens of thousands of years ago to solve problems faced by our hunter-gatherer ancestors. In this provocative and lively book, David Buller examines in detail the major claims of evolutionary psychology—the paradigm popularized by Steven Pinker in *The Blank Slate* and by David Buss in *The Evolution of Desire*—and rejects them all. This does not mean that we cannot apply evolutionary theory to human psychology, says Buller, but that the conventional wisdom in evolutionary psychology is misguided. Evolutionary psychology employs a kind of reverse engineering to explain the evolved design of the mind, figuring out the adaptive problems our ancestors faced and then inferring

the psychological adaptations that evolved to solve them. In the carefully argued central chapters of *Adapting Minds*, Buller scrutinizes several of evolutionary psychology's most highly publicized "discoveries," including "discriminative parental solicitude" (the idea that stepparents abuse their stepchildren at a higher rate than genetic parents abuse their biological children). Drawing on a wide range of empirical research, including his own large-scale study of child abuse, he shows that none is actually supported by the evidence. Buller argues that our minds are not adapted to the Pleistocene, but, like the immune system, are continually adapting, over both evolutionary time and individual lifetimes. We must move beyond the reigning orthodoxy of evolutionary psychology to reach an accurate understanding of how human psychology is influenced by evolution. When we do, Buller claims, we will abandon not only the quest for human nature but the very idea of human nature itself.

**The Social Leap** Oxford University Press

Sex is as fascinating to scientists as it is to the rest of us. A vast pool of knowledge, therefore, has been gleaned from research into the nature of sex, from the contentious problem of why the wasteful reproductive process exists at all, to how individuals choose their mates and what traits they find attractive. This fascinating book explores those findings, and their implications for the sexual behaviour of our own species. It uses the Red Queen from 'Alice in Wonderland' – who has to run at full speed to stay where she is – as a metaphor for a whole range of sexual behaviours. The book was shortlisted for the 1994 Rhone-Poulenc Prize for Science Books. 'Animals and plants evolved sex to fend

off parasitic infection. Now look where it has got us. Men want BMWs, power and money in order to pair-bond with women who are blonde, youthful and narrow-waisted ... a brilliant examination of the scientific debates on the hows and whys of sex and evolution' Independent.

The Mating Mind HarperCollins

In the compelling popular science tradition of *Sapiens* and *Guns, Germs, and Steel*, a groundbreaking and eye-opening exploration that applies evolutionary science to provide a new perspective on human psychology, revealing how major challenges from our past have shaped some of the most fundamental aspects of our being. The most fundamental aspects of our lives—from leadership and innovation to aggression and happiness—were permanently altered by the "social leap" our ancestors made from the rainforest to the savannah. Their struggle to survive on the open grasslands required a shift from individualism to a new form of collectivism, which forever altered the way our mind works. It changed the way we fight and our proclivity to make peace, it changed the way we lead and the way we follow, it made us innovative but not inventive, it created a new kind of social intelligence, and it led to new sources of life satisfaction. In *The Social Leap*, William von Hippel lays out this revolutionary hypothesis, tracing human development through three critical evolutionary inflection points to explain how events in our distant past shape our lives today. From the mundane, such as why we exaggerate, to the surprising, such as why we believe our own lies and why fame and fortune are as likely to bring misery as happiness, the implications are far reaching and extraordinary. Blending anthropology, biology, history, and psychology with

evolutionary science, *The Social Leap* is a fresh and provocative look at our species that provides new clues about who we are, what makes us happy, and how to use this knowledge to improve our lives.

*Personality Psychology with Connect Access Card* McGraw-Hill Education

An unparalleled exploration of the mysteries underlying women's sexuality that rivals the culture-shifting Kinsey Report, from two of America's leading research psychologists Do women have sex simply to reproduce or display their affection? When University of Texas at Austin clinical psychologist Cindy M. Meston and evolutionary psychologist David M. Buss joined forces to investigate the underlying sexual motivations of women, what they found astonished them. Through the voices of real women, Meston and Buss reveal the motivations that guide women's sexual decisions and explain the deep-seated psychology and biology that often unwittingly drive women's desires—sometimes in pursuit of health or pleasure, or sometimes for darker, disturbing reasons that a woman may not fully recognize.

Drawing on more than a thousand intensive interviews conducted solely for the book, as well as their pioneering research on physiological response and evolutionary emotions, *Why Women Have Sex* uncovers an amazingly complex and nuanced portrait of female sexuality. They delve into the use of sex as a defensive tactic against a mate's infidelity (protection), as a ploy to boost self-confidence (status), as a barter for gifts or household chores (resource acquisition), or as a cure for a migraine headache (medication). *Why Women Have Sex* stands as the richest and deepest psychological understanding of female sexuality yet

achieved and promises to inform every woman's (and her partner's) awareness of her relationship to sex and her sexuality.

*Evolutionary Psychology* Psychology Press

This is the first book to overtly consider how basic evolutionary thinking is being applied to a wide range of special social, economic, and technical problems. It draws together a collection of renowned academics from a very disparate set of fields, whose common interest lies in using evolutionary thinking to inform their research.

ALERT: Before you purchase, check with your instructor or review your course syllabus to ensure that you select the correct ISBN. Several versions of Pearson's MyLab & Mastering products exist for each title, including customized versions for individual schools, and registrations are not transferable. In addition, you may need a CourseID, provided by your instructor, to register for and use Pearson's MyLab & Mastering products. Packages Access codes for Pearson's MyLab & Mastering products may not be included when purchasing or renting from companies other than Pearson; check with the seller before completing your purchase. Used or rental books If you rent or purchase a used book with an access code, the access code may have been redeemed previously and you may have to purchase a new access code. Access codes Access codes that are purchased from sellers other than Pearson carry a higher risk of being either the wrong ISBN or a previously redeemed code. Check with the seller prior to purchase. -- For courses in *Evolutionary Psychology*. David Buss, one of the foremost researchers in the field, has thoroughly

revised his already successful text with nearly 400 new references to provide an even more comprehensive overview of this dynamic field. Using cutting-edge research and an engaging writing style, the Fourth Edition of Evolutionary Psychology ensures that your students will master the material presented.

### **THE HANDBOOK OF EVOLUTIONARY PSYCHOLOGY, VOLUME 2**

University of Chicago Press

This book examines human psychology and behavior through the lens of modern evolutionary psychology. *Evolutionary Psychology: The New Science of the Mind, 5/e* provides students with the conceptual tools of evolutionary psychology, and applies them to empirical research on the human mind. Content topics are logically arrayed, starting with challenges of survival, mating, parenting, and kinship; and then progressing to challenges of group living, including cooperation, aggression, sexual conflict, and status, prestige, and social hierarchies. Students gain a deep understanding of applying evolutionary psychology to their own lives and all the people they interact with.

**The Evolution of Desire** Oxford University Press

In *The Triumph of Sociobiology*, John Alcock reviews the controversy that has surrounded evolutionary studies of human social behavior following the 1975 publication of E.O. Wilson's classic, *Sociobiology, The New Synthesis*. Denounced vehemently as an "ideology" that has justified social evils and inequalities, sociobiology has survived the assault. Twenty-five years after the field was named by Wilson, the approach he championed has successfully demonstrated its value in the study of animal

behavior, including the behavior of our own species. Yet, misconceptions remain--to our disadvantage. In this straightforward, objective approach to the sociobiology debate, noted animal behaviorist John Alcock illuminates how sociobiologists study behavior in all species. He confronts the chief scientific and ideological objections head on, with a compelling analysis of case histories that involve such topics as sexual jealousy, beauty, gender difference, parent-offspring relations, and rape. In so doing, he shows that sociobiology provides the most satisfactory scientific analysis of social behavior available today. Alcock challenges the notion that sociobiology depends on genetic determinism while showing the shortcoming of competing approaches that rely on cultural or environmental determinism. He also presents the practical applications of sociobiology and the progress sociobiological research has made in the search for a more complete understanding of human activities. His reminder that "natural" behavior is not "moral" behavior should quiet opponents fearing misapplication of evolutionary theory to our species. The key misconceptions about this evolutionary field are dissected one by one as the author shows why sociobiologists have had so much success in explaining the puzzling and fascinating social behavior of nonhuman animals and humans alike.

**Applied Evolutionary Psychology** Simon and Schuster

As acclaimed psychological researcher and author David Buss writes, "People are mesmerized by murder. It commands our attention like no other human phenomenon, and those touched by its ugly tendrils never forget." Though we may like to believe that murderers are pathological misfits and hardened criminals,

the vast majority of murders are committed by people who, until the day they kill, would seem to be perfectly normal. David Buss's pioneering work has made major national news in the past, and this provocative book is sure to generate a storm of attention. *The Murderer Next Door* is a riveting look into the dark underworld of the human psyche—an astonishing exploration of when and why we kill and what might push any one of us over the edge. A leader in the innovative field of evolutionary psychology, Buss conducted an unprecedented set of studies investigating the underlying motives and circumstances of murders, from the bizarre outlier cases of serial killers to those of the friendly next-door neighbor who one day kills his wife. Reporting on findings that are often startling and counterintuitive—the younger woman involved in a love triangle is at a high risk of being killed—he puts forth a bold new general theory of homicide, arguing that the human psyche has evolved specialized adaptations whose function is to kill. Taking readers through the surprising twists and turns of the evolutionary logic of murder, he explains exactly when each of us is most at risk, both of being murdered and of becoming a murderer. His findings about the high-risk situations alone will be news making. Featuring gripping storytelling about specific murder cases—including a never used FBI file of more than 400,000 murders and a highly detailed study of 400 murders conducted by Buss in collaboration with a forensic psychiatrist, and a pioneering investigation of homicidal fantasies in which Buss found that 91 percent of men and 84 percent of women have had at least one such vivid fantasy—*The Murderer Next Door* will be necessary reading for those who have been fascinated by books

on profiling, lovers of true crime and murder mysteries, as well as readers intrigued by the inner workings of the human mind.

**Foundations of Evolutionary Psychology** Oxford University Press

The indispensable reference tool for the groundbreaking science of evolutionary psychology Why is the mind designed the way it is? How does input from the environment interact with the mind to produce behavior? These are the big, unanswered questions that the field of evolutionary psychology seeks to explore. The Handbook of Evolutionary Psychology is the seminal work in this vibrant, quickly-developing new discipline. In this thorough revision and expansion, luminaries in the field provide an in-depth exploration of the foundations of evolutionary psychology and explain the new empirical discoveries and theoretical developments that continue at a breathtaking pace. Evolutionary psychologists posit that the mind has a specialized and complex structure, just as the body has a specialized and complex structure. From this important theoretical concept arises the vast array of possibilities that are at the core of the field, which seeks to examine such traits as perception, language, and memory from an evolutionary perspective. This examination is intended to determine the human psychological traits that are the products of sexual and natural selection and, as such, to chart and understand human nature. Join the discussion of the big questions addressed by the burgeoning field of evolutionary psychology Explore the foundations of evolutionary psychology, from theory and methods to the thoughts of EP critics Discover the psychology of human survival, mating, parenting, cooperation and conflict, culture, and more Identify how evolutionary psychology is interwoven with other academic subjects and traditional psychological disciplines The Handbook of Evolutionary

Psychology is the definitive guide for every psychologist and student interested in keeping abreast of new ideas in this quickly-developing field.

Bad Men McGraw-Hill Humanities/Social Sciences/Languages Filling a void in the clinical literature, The New CBT: Clinical Evolutionary Psychology integrates new techniques of cognitive behavioral therapy (CBT) with evidence-based evolutionary psychology and behavioral genetics. The text addresses the need for clinicians to be conversant with the burgeoning research that has linked evolutionary and genetic processes to psychological problems. This text makes these essential elements accessible to both clinicians and their clients so they can develop a deeper understanding of crucial clinical topics, such as emotional feelings, cognition, and behavioral change. The New CBT explains the processes of the mind and provides solutions to many of the problems that arise when these processes lead to dysfunction or distress. The text reviews how the application of evolutionary psychology and behavioral genetics provides both etiological insights and novel treatments for each of the major psychological disorders. Readers are offered evidenced-based explanations of how evolution and genetics can pragmatically resolve the enduring problem of nature versus nurture. Additionally, they come to understand how eons of environmental changes have guided the way people deal with distress, perceive their environment, and judge others as well as themselves. By viewing both normative and problematic behavior through an evolutionary lens, readers gain new perspectives in applying CBT that are thoroughly modern, effective, and take into consideration cutting-edge research. The New CBT is an ideal text

for upper-division courses in psychology, psychotherapy, and psychopathology, especially those with an emphasis on CBT. It is also an excellent resource for practicing clinicians who wish to update or reframe their understanding and use of CBT, evolutionary psychology, or behavioral genetics. Mike Abrams is a practicing psychologist and clinical researcher with a specialty in cognitive behavioral therapy. He is an adjunct full professor in the M.A. program in psychology at New York University and Managing partner of Psychology for New Jersey, LLC a clinical research corporation. He is a board-certified diplomate of the American

Board of Professional Psychology and a supervisor, fellow, and diplomate of the Albert Ellis Institute. Dr. Abrams studied and worked closely with Dr. Albert Ellis, with whom he published several books, chapters, and articles on REBT and CBT. Dr. Abrams has also authored four other books on psychology and has practiced or taught professional psychology for more than thirty years. His research into the evolutionary basis of sexual and trauma disorders led the publication along with David Buss of the first clinical protocol combining evolutionary psychology and CBT.
