All hospitals, physician and dental offices, ambulance companies, emergency medical technicians, medical laboratories, fire departments, and manufacturing sites with their own first aid clinics are required to comply with OSHA 1910.1030. This book provides you with (1) an employee exposure determination, (2) the method and schedule of implementation of standard requirements, and (3) a description of exposure incident evaluation procedures. Bloodborne pathogens include, among others, the HIV virus and the hepatitis B virus, both potentially fatal. Other bloodborne diseases are Lyme disease, herpes virus, HTLV, malaria, babesiosis, and Chagas' disease. This manual contains everything you need to comply with the regulations, as well as to protect your workers' health and liability. A customized implementation plan can be created using the ASCII file stored on the IBM-compatible computer disk (5.25-inch and 3.5-inch)

packaged with the book. OSHA Bloodborne Pathogens Exposure Control Plan will be an essential guide for any employer required to comply with the new OSHA Exposure Control Plan.

Phlebotomy uses large, hollow needles to remove blood specimens for lab testing or blood donation. Each step in the process carries risks - both for patients and health workers. Patients may be bruised. Health workers may receive needle-stick injuries. Both can become infected with bloodborne organisms such as hepatitis B, HIV, syphilis or malaria. Moreover, each step affects the quality of the specimen and the diagnosis. A contaminated specimen will produce a misdiagnosis. Clerical errors can prove fatal. The new WHO guidelines provide recommended steps for safe phlebotomy and reiterate accepted principles for drawing, collecting blood and transporting blood to laboratories/blood banks.

This New American Red Cross CPR/AED for the Professional Rescuer Participant's Manual and course reflect changes based on the 2005 Consensus on Science for CPR and Emergency Cardiovascular Care (ECC) and the Guidelines 2005 for First Aid. Changes to this program and manual

include simplifications to many of the CPR skill sequences, which helps improve retention. There have also been changes to help improve the quality of CPR. The integration of CPR skills into the operation of AEDs had changed to help improve survival from sudden cardiac arrest. Professional rescuers are now trained to use AEDs on adults and children. Information has been updated and added to this program to help professional rescuers administer epinephrine, aspirin and fixed-flow-rate oxygen. The skills learned in this course include adult, child and infant rescue breathing, conscious and unconscious choking, CPR, two-rescuer CPR and adult and child AED. Additional training can be added to this course including bloodborne pathogens training and emergency oxygen administration. While the skills and knowledge that professional rescuers use are increasing, this

training will help you meet your most important responsibility as a professional rescuer- the responsibility to save lives.
