Universal Access in Ambient Intelligence Environments
 IGI Global
 Section 1557 is the

nondiscrimination provision of the Affordable Care Act (ACA). This brief guide explains Section 1557 in more detail and what your practice needs to do to meet the requirements of this

federal law. Includes sample notices of nondiscrimination, as well as taglines translated for the top 15 languages by state.

The path for developing an internationally usable product with a human-machine interface is described in this textbook, from theory to conception and from design to practical implementation. The most important concepts in the fields of philosophy, communication, culture and Ethnocomputing as the basis of intercultural user interface design are explained. The book presents directly usable and implementable knowledge that is relevant for the processes of internationalization and localization of software. Aspects of software ergonomics, software engineering and human-centered design are presented in an intercultural context; general and concrete recommendations and checklists for immediate use in product design are also provided. Each chapter includes the target message, its motivation and theoretical justification as well as the practical methods to achieve the intended benefit from the respective topic. The book opens with an introduction illuminating

the background necessary for taking culture into account in Human Computer Interaction (HCI) design. Definitions of concepts are followed by a historical overview of the importance of taking culture into account in HCI design. Subsequently, the structures, processes, methods, models, and approaches concerning the relationship between culture and HCI design are illustrated to cover the most important questions in practice.

The Framework for a Public Health Emergency Operations Centre (PHEOC framework) document is intended to be used by practitioners of public health; health policy makers; and authorities and agencies responsible for managing emergencies, incidents, or events where the health of populations is at risk. This document provides high-level methodical guidance for designing, developing, and strengthening of public health emergency operations centers. This interim document outlines the key concepts and essential requirements for

developing and managing a public health EOC (PHEOC). The overall approach is generic and based on widely acknowledged elements of all-hazards emergency management. It provides an outline for developing and managing a PHEOC to achieve a goal-oriented response to public health emergencies and unity of effort among response agencies. The document will be revised as necessary. Practical guidance on specific aspects of the PHEOC framework will be developed and published separately. A public health emergency is here defined as an occurrence, or imminent threat, of an illness or health condition that poses a substantial risk of a significant number of human fatalities, injuries or permanent or long-term disability. Public health emergencies can result from a wide range of hazards and complex emergencies. Experience has shown that timely implementation of an EOC provides an essential platform for the effective management of public health emergencies. Public health emergencies involve increased incidence of illness, injury and/or death and require

special measures to address increased morbidity, mortality and interruption of essential health services. For such emergencies, a multi-agency, multi-jurisdictional response is often required, working with the national disaster management organization. When normal resources and capacities are exceeded, support from outside the affected areas will also be required. External assistance could include national, cross-border, regional or international resources.

Web Accessibility Springer Science & Business Media
The second volume of this research monograph describes a number of applications of Artificial Intelligence in the field of Customer Relationship Management with the focus of solving customer problems. We design a system that tries to understand the customer complaint, his mood, and what can be done to resolve an issue with the product or service. To solve a customer problem efficiently, we maintain a dialogue with the customer so that the problem can be clarified and multiple ways to fix it can be sought. We introduce dialogue

management based on discourse analysis: a systematic linguistic way to handle the thought process of the author of the content to be delivered. We analyze user sentiments and personal traits to tailor dialogue management to individual customers. We also design a number of dialogue scenarios for CRM with replies following certain patterns and propose virtual and social dialogues for various modalities of communication with a customer. After we learn to detect fake content, deception and hypocrisy, we examine the domain of customer complaints. We simulate mental states, attitudes and emotions of a complainant and try to predict his behavior. Having suggested graph-based formal representations of complaint scenarios, we machine-learn them to identify the best action the customer support organization can choose to retain the complainant as a customer.

The State and Industry in South Korea Routledge
Covering key areas of evaluation and methodology, client-side applications, specialist and novel technologies,

along with initial appraisals of disabilities, this important book provides comprehensive coverage of web accessibility. Written by leading experts in the field, it provides an overview of existing research and also looks at future developments, providing a much deeper insight than can be obtained through existing research libraries, aggregations, or search engines.

Springer

A green economy is necessary if sustainable development is to be realised. However, as this report emphasizes, a green economy can also, if accompanied by the right policy mix, create more and better jobs, lift people out of poverty and promote social inclusion. In fact, the growth model of the past few decades has been inefficient, not only economically, but also from environmental, employment and social perspectives. It overuses natural resources, is environmentally unsustainable and has failed to meet the aspirations of a large proportion of society

seeking productive, decent work and dignified lives. A new development model - one which puts people, fairness and the planet at the core of policy-making - is urgently needed, and is eminently achievable. More fundamentally, this report demonstrates that employment and social inclusion must be integral parts of any sustainable development strategy and must be included in policies that address climate change and ensure the preservation of the environment. In particular, the report assesses the sectoral, employment and income implications of the transition to a green economy. It highlights the necessary conditions, policy prescriptions and good practices required to ensure that the green economy is characterized by gains in job quality, reductions in poverty and improvements in social inclusion.

Security Standards for Healthcare Information Systems Hanley & Belfus "Territorial cohesion" strives for a more balanced spatial development and seeks to improve integration throughout the EU. The scientific articles in this volume examine the

interpretations of this term, the challenges of European spatial development policy, and the problems and concepts involved in achieving territorial cohesion. Two short reports illustrate the implementation of territorial cohesion on the basis of two research projects.

HEARINGS BEFORE THE COMMITTEE ON INTERNAL SECURITY, NINETY-FIRST CONGRESS, SECOND SESSION. 1970

Springer Nature
Threatening the safety of individuals, computers, and entire networks, cyber crime attacks vary in severity and type. Studying this continually evolving discipline involves not only understanding different types of attacks, which range from identity theft to cyberwarfare, but also identifying methods for their prevention. *Cyber Crime: Concepts, Methodologies, Tools and Applications* is a three-volume reference that explores all aspects of computer-based crime and threats, offering solutions and best practices from experts in software development,

information security, and law. As cyber crime continues to change and new types of threats emerge, research focuses on developing a critical understanding of different types of attacks and how they can best be managed and eliminated.

Human-System interaction has been and will continue to be of interest to many researchers of various disciplines: engineers, computer scientists, psychologists, and social scientists. The research in Human-System Interaction (HSI) has progressed from the era of using anthropomorphic data to design workspace to the current period which utilizes human and artificial sensors to design sensory-based cooperative workspace. In either of these developments, HSI has been known to be complex. In 1994, we initiated a series of symposiums on Human Interaction with Complex Systems. It was then that various ideas surrounding HSI for today and tomorrow were discussed by many scientists in the related disciplines. As a follow-up, in 1995 the Second Symposium was organized. The objective

of this symposium was to attempt to define a framework, principles, and theories for HSI research. This book is the result of that symposium. The 1995 symposium brought together a number of experts in the area of HSI. The symposium was more focused on expert opinions and testimonies than traditional meetings for technical papers. There were three reasons for that approach.

The Korean economy has experienced astoundingly rapid growth during the period 1960-90 and is now able, despite its late start, to compete with mature industrialised economies. This book focuses on the underlying economic factors behind this unprecedented growth performance examining the failures as well as the undoubted successes of such development.

Academic Press

Cytogenomics demonstrates that chromosomes are crucial

in understanding the human genome and that new high-throughput approaches are central to advancing cytogenetics in the 21st century. After an introduction to (molecular) cytogenetics, being the basic of all cytogenomic research, this book highlights the strengths and newfound advantages of cytogenomic research methods and technologies, enabling researchers to jump-start their own projects and more effectively gather and interpret chromosomal data. Methods discussed include banding and molecular cytogenetics, molecular combing, molecular karyotyping, next-generation sequencing, epigenetic study approaches, optical mapping/karyomapping, and CRISPR-cas9 applications for cytogenomics. The book's second half demonstrates recent applications of cytogenomic techniques, such as characterizing 3D chromosome structure across different tissue types and insights into multilayer organization of chromosomes, role of repetitive elements and noncoding RNAs in human genome, studies in topologically associated

domains, interchromosomal interactions, and chromoanagenesis. This book is an important reference source for researchers, students, basic and translational scientists, and clinicians in the areas of human genetics, genomics, reproductive medicine, gynecology, obstetrics, internal medicine, oncology, bioinformatics, medical genetics, and prenatal testing, as well as genetic counselors, clinical laboratory geneticists, bioethicists, and fertility specialists. Offers applied approaches empowering a new generation of cytogenomic research using a balanced combination of classical and advanced technologies Provides a framework for interpreting chromosome structure and how this affects the functioning of the genome in health and disease Features chapter contributions from international leaders in the field
Hearings Before the Committee on Internal Security, Ninety-second Congress, Second Session. 1972
International Labor Office
This book constitutes the refereed proceedings of

the 9th International Conference on Digital Human Modeling and Applications in Health, Safety, Ergonomics, and Risk Management, DHM 2018, held as part of HCI International 2018 in Las Vegas, NV, USA. HCII 2018 received a total of 4346 submissions, of which 1171 papers and 160 posters were accepted for publication after a careful reviewing process. The 53 papers presented in this volume were organized in topical sections as follows: Anthropometry, ergonomics and design; Motion modelling and rehabilitation; User diversity and well-being; Nursing and medical applications; Transportation human factors.

Hearings, Reports and Prints of the House Committee on Internal Security National Academies Press

This book constitutes the refereed proceedings of the 9th ERCIM Workshop on User Interfaces for All, focusing on Universal Access in Ambient Intelligence Environments, held in Königswinter, Germany in September 2006. It covers interaction platforms and techniques for ambient intelligence, user and context awareness,

inclusive design and evaluation, as well as access to information, education and entertainment.

Independently Published

This book describes a vision of manufacturing in the twenty-first century that maximizes efficiencies and improvements by exploiting the full power of information and provides a research agenda for information technology and manufacturing that is necessary for success in achieving such a vision. Research on information technology to support product and process

design, shop-floor operations, and flexible manufacturing is described. Roles for virtual manufacturing and the information infrastructure are also addressed. A final chapter is devoted to nontechnical research issues.

FRAMEWORK FOR A PUBLIC HEALTH EMERGENCY OPERATIONS CENTRE

Observatory Studies
This book constitutes the refereed post-conference proceedings of the 7th IFIP WG 13.2 International Conference on Human-Centered Software Engineering, HCSE 2018, held in Sophia Antipolis, France, in September 2018. The 11 full papers and 7 short papers presented together with 5 poster and demo papers were carefully reviewed and selected from 36 submissions. The papers focus on the interdependencies between user interface properties and contribute

to the development of theories, methods, tools and approaches for dealing with multiple properties that should be taken into account when developing interactive systems. They are organized in the following topical sections: HCI education and training; model-based and model-driven approaches; task modeling and task-based approaches; tools and tool support; and usability evaluation and UI testing.

KOREAN ECONOMIC DYNAMISM

Springer
Addresses two of the defining challenges of the twenty-first century: achieving environmental sustainability and turning the vision of decent work for all into a reality. Shows that not only are both challenges urgent, but they are also intimately linked and will have to be addressed together. Demonstrates that while it is certain that environmental degradation and climate

change will increasingly require enterprises and labour markets to react and adjust, the goal of environmentally sustainable economies will not be attained without the active contribution of the world of work. Mentions the Freedom of Association and Protection of the Right to Organise Convention, 1948 (No. 87), the Right to Organise and Collective Bargaining Convention, 1949 (No. 98), the Employment Policy Convention, 1964 (No. 122), the Benzene Convention, 1971 (No. 136), the Human Resources Development Convention, 1975 (No. 142), the Tripartite Consultation (International Labour Standards) Convention, 1976 (No. 144), the Indigenous and Tribal Peoples Convention, 1989 (No. 169), the Chemicals Convention, 1990 (No. 170), and the Prevention of Major Industrial Accidents Convention, 1993 (No. 174).
