 In Cheap at Half the Price,
 by #1 New York Times bestselling author and master of the short story Jeffrey Archer, the conniving Consuela Rosenheim hunts down her ideal birthday present – and next husband – in London. Will she accomplish her biggest swindle yet, or will she finally

get her just desserts? The wily woman is, as Archer opens, “naturally superior to men,” and a pure joy for Archer fans new and old. Singapore and the Silk Road of the Sea, 1300-1800 Prentice Hall Today's enterprises are global in all respects - they trade globally and they raise capital in international markets. This title places an emphasis on interpretation, use and impact of standards in

financial reporting.

 Beneath the modern skyscrapers of Singapore lie the remains of a much older trading port, prosperous and cosmopolitan and a key node in the maritime Silk Road. This book synthesizes 25 years of archaeological research to reconstruct the 14th-century port of Singapore in greater detail than is possible for

any other early Southeast Asian city. The picture that emerges is of a port where people processed raw materials, used money, and had specialized occupations. Within its defensive wall, the city was well organized and prosperous, with a cosmopolitan population that included residents from China, other parts of Southeast Asia, and the Indian Ocean. Fully illustrated,

with more than 300 maps and colour photos, Singapore and the Silk Road of the Sea presents Singapore's history in the context of Asia's long-distance maritime trade in the years between 1300 and 1800: it amounts to a dramatic new understanding of Singapore's pre-colonial past.

Passive and

Low Energy Architecture contains the proceedings of the Second International PLEA Conference held in Crete, Greece, on June 28 to July 1, 1983. The book is organized into four parts as the topics of the conference. The first part brings together papers dealing with case studies of individual buildings or groups of buildings, completed or to be built, and of community

planning. The case studies cover examples from 13 countries in Europe, North and Latin America, North Africa, the Middle East, and Asia. The second part contains papers on experimental work and technical developments with passive and low energy systems and components. The third section focuses on the ill-defined but crucial to designers, area of design aids. The

fourth section centers on implementation and management of these energy systems, including topics of international programs, education, and training of design professionals. The book will be useful to energy conscious designers, architects, engineers, and planners in this field of interest.

Coal is an important fossil fuel resource for many nations due to its large remaining resources, relatively low production and processing cost and potential high energy intensity. Certain issues surround its utilisation, however, including emissions of pollutants and growing concern about climate change. The coal handbook: Towards cleaner

production Volume 1 reviews the coal production supply chain from analysis to extraction and distribution. Part one explores coal characterisation and introduces the industrial use of coal as well as coal formation, petrography, reserves, sampling and analysis. Part two moves on to review coal extraction and preparation. Chapters highlight advances in coal mining technology,

underground coal gas extraction, coal sizing, comminution and cleaning, and solid-liquid separation technologies for coal. Further chapters focus on economic factors affecting coal preparation, post-treatment of coal, coal tailings treatment, and the optimisation, simulation and control of coal preparation plants. Finally, part three considers aspects of the coal supply

chain including the management approach and individual functions such as coal blending and homogenisation, transportation and handling along the entire supply chain. With its distinguished editor and international team of expert contributors, The coal handbook Volumes 1 and 2 is a comprehensive and invaluable resource for professionals in the coal mining,

preparation, and utilisation industry, those in the power sector, including plant operators and engineers, and researchers and academics interested in this field. Reviews the coal production supply chain from analysis to extraction
