 This report describes the final development and validation of an integrated three-tier system for assessing drivers degrees of driving wellness (degree of freedom from driving-relevant functional limitations) and driving fitness (degree to which a driver compensates for any such limitations while actually driving). Both driving wellness and driving fitness are assessed in a driving-centered manner. Assessment tools recommended for use in each tier are described, as is the selection of two decision points (cutpoints) which separate drivers into three categories: pass ('driving-well'), 'somewhat functionally limited', and 'extremely functionally limited.' Compared to elder renewal license applicants who were assessed as somewhat functionally limited, elder renewals assessed as extremely functionally limited were more likely to fail a structured road test, but less likely to have been crash involved in the last three years. Reasons for this apparent paradox, in which more functionally limited drivers have fewer crashes, are addressed in the report. The report describes in detail the flow of renewal license applicants through the three-tier assessment system and makes numerous recommendations, including that the three-tier assessment system be adopted

on a pilot basis for further evaluation.

 Quality Assurance Workbook for Radiographers and Radiological Technologists
 This workbook on Quality assurance is primarily written for radiographers and radiological technologists, but it may prove valuable for other health professionals. It focuses on the most essential steps of practical quality assurance needed in order to improve safety, quality, and efficacy of their work, and may be used either for self study and self assessment, or as part of organized training courses. The workbook includes teaching techniques and health and safety issues in X-ray departments. It also includes 6 teaching modules on reject film analysis, accessory equipment, X-ray equipment, manual film processing, automatic film processing, and radiographic exposures. It concludes with two appendix on making simple test tools, graphs, check sheets and record sheets, as well as a glossary and references.

 Rowman & Littlefield
 The X-ray equipment maintenance and repairs workbook is intended to help and guide staff working with, and responsible for, radiographic equipment and installations in remote institutions where the necessary technical support is not available, to perform routine maintenance and minor repairs of equipment to avoid break downs. The book can be used for self study and as a checklist for routine maintenance procedures.
Weather Summary for H.O. Pub. No. 275, Naval Air Pilot
 New paperback edition of original hardback published by Crane Hill in 1997. A record of the

memories and stories of America's lighthouse keepers. Descriptions of daily life at a lighthouse.
