A COLOR HANDBOOK

Lippincott Williams & Wilkins

The field of ophthalmology has advanced considerably in the past several decades in terms of surgical and technical advancements, understanding the mechanism of diseases and treating conditions that were once considered untreatable. As is the case with so many other specialties in medicine, ophthalmology is guided by "evidence based medicine," based on the results of randomized controlled trials (RCTs). To put this powerful information in the hands of clinicians, this

handbook was developed to provide a succinct yet comprehensive review of the most essential evidence-based medicine in ophthalmology. This essential text forms a framework for the evidence-based clinical practice of ophthalmic technicians, residents, academic and private practitioners of ophthalmology as well as researchers, optometrists and others. It also serves as a core review text for tests such as the OKAP and ophthalmology board exams, which emphasize knowledge based in the outcomes of major RCTs. This text covers the major research carried out in all of the subspecialties of ophthalmology including cornea, medical and surgical retina, glaucoma, oculoplastics, neuro-ophthalmology, and pediatric ophthalmology. Each chapter has been carefully edited by top academic faculty at the Duke University Eye Center, who have an intimate understanding of the essential knowledge contained within the current ophthalmic literature and have contributed commentary on the results. This book therefore is not only a convenient review of the vital knowledge in

ophthalmology, but also provides a keen analysis by world experts of the most up-to-date research in their respective fields. In short, this book promises to change the way eye care professionals use RCTs in clinical practice by putting this powerful information conveniently in their hands.

Illustrated Handbook of Ophthalmology Elsevier Health Sciences

This handbook of ophthalmic nursing standards and procedures has been developed to assist healthcare professionals working in a wide range of ophthalmic settings, and also to provide the patient with safe and consistent ophthalmic nursing care. Ophthalmic care is constantly changing and progressing, with new technical roles being introduced all the time. The authors discovered within their own unit that new healthcare professionals, both registered and non-registered, were often shown slightly different ways of doing things by more experienced members of the team, which led to confusion. They felt it was a bit like driving; bad habits can easily slip into everyday practice. For this reason, they developed standards

of care to act as a benchmark for the ophthalmic practitioner. Written in response to a widely expressed need for greater clarity and consistency, this highly regarded book offers a comprehensive one-stop resource for all ophthalmic practitioners, whether they are registered nurses, healthcare assistants or ophthalmic technicians. This new edition has been revised to make the text even clearer and bring all the guidance up to date, covering communication, visual acuity testing, ocular medications, the ophthalmic outpatient department, biometry, the ophthalmic accident and emergency department, the slit lamp and tonometry, additional standards using specific equipment, and suggested documentation for providing evidence of development and competence. Sections include: Communication Visual Acuity Testing Ocular Medications The Ophthalmic Outpatient Department Biometry The Ophthalmic Accident and Emergency Department Slit Lamp and Tonometry Additional Standards Using Specific Equipment Next Steps Using Standards
