PROJECT MANAGEMENT FOR CONSTRUCTION

Sweet Valley

The first edition of this comprehensive work quickly filled the need for an in-depth handbook on concrete construction engineering and technology. Living up to the standard set by its bestselling predecessor, this second edition of the Concrete Construction Engineering Handbook covers the entire range of issues pertaining to the construction

Drug abuse is a serious national health concern that costs American society billions of dollars and countless lives each year. Though it attracts the attention of politicians, mental health professionals, the media and members of the general public, little real progress has been made toward understanding the nature of the problem.

Providing a perspective on alcohol and other drug abuse that should be of value to practitioners, course instructors, and students of psychology, counselling and sociology, this book should also be useful for anyone interested in developing a

comprehensive understanding of substance abuse difficulties and their treatment. The organizing theme is that drug abuse can be conceptualized as a lifestyle, in which the individual demonstrates an increasing level of both commitment and preoccupation with drug-related activities, goals and relationships.; The lifestyle model considers three primary categories of influence in offering a working model of drug-seeking behaviour. These three factors, commonly referred to as the "three C's", are conditions internal and external influences that increase or decrease a person's future risk of abusing drugs, choice decision-making processes of an individual, and cognition thinking patterns the individual uses to justify his or her decisions and subsequent drug use behaviour.; The first section of this book probes biological, psychological, and sociological roots of drug abuse, and is followed by a discussion of developmental origins, features and progressions of drug lifestyle involvement. Finally,

potential avenue of intervention and prevention are investigated in an effort to construct a comprehensive programme of lifestyle change. Applicable case studies are also examined in relation to these issues.

The best-selling Reinforced Concrete Design provides a straightforward and practical introduction to the principles and methods used in the design of reinforced and prestressed concrete structures. The book contains many worked examples to illustrate the various aspects of design that are presented in the text. The seventh edition of the text has been fully revised and updated to reflect the interpretation and use of Eurocode 2 since its introduction. Students and practitioners, both in the UK and elsewhere in the world where Eurocode 2 has been adopted, will find it a concise guide both to the basic theory and to appropriate design procedures. Design charts, tables and formulae are included as design aids and, for ease

of reference, an appendix contains a summary of important design information. Features of the seventh edition are: • Completely revised to reflect recent experience of the usage of Eurocode 2 since its introduction in 2004 and its adoption in the UK as a design standard in 2010 • Further examples of the theory put into practice • A new chapter on water retaining structures in accordance with Eurocode 2, Part 3 • New sections on, for example, design processes including conceptual design, deep beams and an expanded treatment of designing for fire resistance

Leprosy is a scary disease. Most people have a serious aversion to losing their sense of touch and growing numb and unable to feel another's touch, or even sensing hot and cold temperatures. They have an aversion to losing fingers, toes, and noses. They have an aversion to losing their eyesight, their ability to walk or to pick up a penny, and even their ability to have a sexual relationship. Hopefully, you don't have the

physical disease of Leprosy. Did you know, though, that you might have "Spiritual Leprosy?" Your lifestyle may be creating numbness to the activities that are unacceptable to family, to friends, and to God. You are living a life that has become self-serving, addictive, and destructive to the extent that those in your life want nothing more to do with you. You're becoming immobile and non-functional in life because of a slavery to sin that has overtaken you. You are dying and may not even realize it yet. At one point in our lives, we are all leprous. Through the voice of Mee Ali, readers experience the rhythms and rituals of life in rural Namibia in interconnected stories. In Oshaantu, a place where women are the backbone of the home but are expected to submit to patriarchal dominance, Mee Ali is happily married. Her friend, Kauna, however, suffers at the hands of an abusive husband. When he is found dead at home,

many of the villagers suspect her of poisoning him. Backtracking from that time, the novel, with its universal appeal, reveals the value of friendships, some of which are based on tradition while others grow out of strength of character, respect, and love.

Robert Peurifoy was a giant in the field of construction engineering and authored several books during his lifetime. This book last published in 1989 and will capitalize on the well-known name of the author. In this edition, computer calculations of costs and of modeling have been added as well as updated statistics, computer related examples and new problems. Civil, Environmental, and Construction Management Engineering Majors and Professionals will benefit

from having this title on their shelf. This edition retains the conceptual strengths of the Peurifoy approach and organization from the previous edition but the new problems and computer-based examples and new up-to-date construction data make it the only choice in academia or industry.
