Definition Language development in humans is a process starting early in life. Infants start without knowing a language, yet by 10 months, babies can distinguish speech sounds and engage in babbling. Some research has shown that the earliest learning begins in utero when the fetus starts to recognize the sounds and speech patterns of its mother's voice and differentiate them from other sounds after birth. Language development - Wikipedia The first two theories of language development represent two extremes in the level of interaction required for language to occur (Berk, 2007). Chomsky and the language acquisition device: The view known as nativism advocated by Noam Chomsky suggests that infants are equipped with a neurological construct referred to as the language acquisition device or LAD that makes infants ready for language. Language Development | Child Development Waves Bye-Bye. Development Milestone emerges from age 6 to 9 months. It is such a joy to witness for the first time your baby waving bye-bye. At this age, your baby probably doesn't understand the full meaning of it and may wait to do it when the person is out of sight.
