number of each type of white blood cell present in the blood. A study of red blood cell, white blood cell, and platelet morphology is also performed. The differential count may be performed after the wbc blood count has been determined by the automated 3 part differential, and may be used as a double check on the white blood cell count. MANUAL DIFFERENTIAL, SMEAR REVIEW ** | Student Health ... The Cell Atlas. The Cell Atlas provides high-resolution insights into the expression and spatio-temporal distribution of proteins within human cells. Using a panel of 64 cell lines to represent various cell populations in different organs and tissues of the human body, the mRNA expression of all human genes are characterized by deep RNA-sequencing. The subcellular distribution of each protein is investigated in a subset of cell lines selected based on corresponding gene expression.
