Spontaneous pneumothorax as manifestation of Marfan syndrome

Pneumothorax And Bullae In MarfanConclusions: The frequency of blebs is relatively low in patients with Marfan syndrome but the risk of pneumothorax is significantly higher in those with radiologically detectable blebs or bullae. Chest CT scanning to identify blebs and bullae may allow risk stratification for pneumothorax in patients with Marfan syndrome.Pneumothorax and bullae in Marfan syndrome — Mayo ClinicBackground. Spontaneous pneumothorax (SP) is a relatively rare condition in the paediatric population with a bimodal peak age of occurrence, with most cases occurring either in the neonatal period or in late adolescence. In children, SP is often caused by a tear in the visceral pleura due to the rupture of a subpleural bulla,...Spontaneous pneumothorax as manifestation of Marfan syndromePneumothorax and Bullae in Marfan Syndrome.
