Reading French in the Arts and Sciences Letts and Lonsdale

Increased emphasis in many school systems on formal testing to mark student achievement and hold teachers accountable has begun to heighten concern among many educational policy makers, assessment specialists, and classroom teachers over questions of access and fairness, particularly for learners from culturally different backgrounds and those with a history of academic struggles. This situation echoes that faced by the Russian psychologist L. S. Vygotsky nearly ninety years ago in his efforts to understand processes of development and meet the needs of all learners. His famous proposal of the Zone of Proximal Development (ZPD) holds that

assessments must take account not only of abilities that have fully formed but also those that are still emerging. The diagnostic value of the ZPD lies in identifying the underlying source of learner difficulties as well as their future potential. Since Vygotsky's time, psychologists and educators have devised a range of practices for engaging with learners in ZPD activity that have come to be known as Dynamic Assessment (DA). In DA, assessors go beyond observations of independent performance and engage cooperatively with learners to both understand and support their development. This process is in full evidence in the papers in this collection, which offers a cross section of applications of DA with diverse populations, including special needs learners, immigrant and minority students, and second language learners. While these papers may be read as cutting-edge academic research, they also represent a commitment to going beyond manifest difficulties and failures to help individuals construct a more positive future. This book was originally published as a special issue of *Assessment in Education: Principles, Policy & Practice*. Innovative Language Learning
Until now, the picture painted of French second language learning in Canada has tended to focus on successful French immersion. This volume offers a broader representation, in response to the demographic changes that have made the French language classroom a more complex place. Focusing on inclusion and language maintenance, the chapters discuss how a multilingual population can add the two official languages to their repertoire whilst maintaining their languages of origin/heritage; how the

revitalization of Indigenous languages can best be supported in the language classroom, and how students with disabilities can be helped to successfully learn languages.

Sometimes I Feel Like a Fox Routledge
For decades, bilingualism has resisted definition. If bilingualism is defined as habitual, fluent, correct and accent-free use of two languages, few individuals would qualify as bilinguals. A more viable approach may be to concede that 'bilingual' can be seen instead as a range of points on a continuum that allows for differences. The psychological study of bilingualism encompasses a wide range of phenomena including the organization and representation of the grammar, the perception and production of language mixing, cerebral lateralization of language functions, and patterns of recovery of aphasic patients. This book collects together an international array of researchers in experimental psychology, linguistics and neuropsychology, who bring their expertise to bear on the critical issues that are raised by the bilingual phenomena.
