**Clinical Methods in
Obstetrics &**

Gynecology CRC Press
Written by medical
specialists and faculty of
the Department of

Obstetricians and Gynaecology, National University Health Services, Integrated Approach to Obstetrics and Gynaecology is a textbook for medical undergraduates and residents. This textbook is unique in that it takes an integrated approach in discussing the six phases in the life of a woman, namely, the early years of growing up, the reproductive years, pre-conception, early pregnancy, pregnancy care, and functional ageing in a mature woman. Emphasis has been focused on information that constitutes essential 'core knowledge' in the blueprint of the medical undergraduate curriculum. The format is easy to follow: background introduction to history; examinations and investigations to establish a diagnosis and then treatment and management. However, this may have to be modified as deemed appropriate for a particular topic. Where appropriate, knowledge that is 'good to know' has been incorporated beyond the essential 'core knowledge'.

A Text-book of obstetrics

The delivery of high quality and equitable care for both mothers and newborns is complex and requires efforts across many sectors. The United States spends more on childbirth than any other country in the world, yet outcomes are worse than other high-resource countries, and even worse for Black and Native American women. There are a variety of factors that influence childbirth, including social determinants such as income, educational levels, access to care, financing, transportation, structural racism and geographic variability in birth settings. It is important to reevaluate the United States' approach to maternal and newborn care through the lens of these factors

across multiple disciplines. Birth Settings in America: Outcomes, Quality, Access, and Choice reviews and evaluates maternal and newborn care in the United States, the epidemiology of social and clinical risks in pregnancy and childbirth, birth settings research, and access to and choice of birth settings.
