Cataloging and Classification for Library Technicians CRC Press
Introduction to cataloging; Introduction to principles of cataloging; Choice of entry rules; Form of entry headings for persons; Form of entry headings for corporate bodies; Uniform titles; Descriptive cataloging; Serials; Cataloging of nonbook materials; Classification; Dewey decimal classification; Library of congress classification; Other general classification systems; Subject headings; Library of congress subject headings; Sears list of subject headings; Centralized services and cataloging routines.

THE ORGANIZATION OF INFORMATION, 4TH EDITION

Littleton, Colo. : Libraries Unlimited
The field's foremost authority on the organization of information does it again! The latest edition of this classic work incorporates

changes, both great and small, in the world of cataloging and classification since the turn of the century. *The RDA Workbook* Libraries Unlimited
Introduction to Cataloging and Classification Libraries Unlimited
An introduction to AACR2, RDA, DDC, LCC, LCSH and MARC 21 Standards Marcel Dekker Incorporated
Cataloging and Classification is also a name for the course that covers general principles of bibliography, cataloging, and indexing, that is required for students working toward degrees in Library/Information Science. Of the few texts available for the course, Lois Chan's *Cataloging and Classification* is the best because the author is the most widely known and respected authority in the field and the text contains complex, difficult information that is presented clearly and in an organized understandable manner, and provides exercises to reinforce the concepts. *Introduction to Cataloging and Classification* Scarecrow Press
Whether a library catalogs its own materials or not, librarians still need to

have some understanding of RDA. Designed to be used by academic, public, and school librarians, this is the perfect introduction.

- Focuses on the new RDA rules and conventions and their implementation, particularly in smaller libraries where there are no professional catalogers
- Presents FRBR and other aspects of RDA's theoretical framework in understandable terms
- Features a step-by-step guide to creating bibliographic records for print and electronic books, videos, and other formats
- Includes quick guides, exercises, a glossary of terms, and a list of additional resources

Cataloging and Classification ABC-CLIO
The 1998 Revision includes changes and corrections authorized by the Joint Steering Committee for Revision of AACR since 1988, including amendments authorized through 1997.

An Introduction
Introduction to Cataloging and Classification
Designed to complement every introductory library reference course, this is the perfect text for students and librarians looking to expand their personal reference knowledge, teaching failsafe methods for

identifying important materials by matching specific types of questions to the best available sources, regardless of format. Guided by a national advisory board of educators and practitioners, this thoroughly updated text expertly keeps up with new technologies and practices while remaining grounded in the basics of reference work. Chapters on fundamental concepts, major reference sources, and special topics provide a solid foundation; the text also offers fresh insight on core issues, including ethics, readers' advisory, information literacy, and other key aspects of reference librarianship; selecting and evaluating reference materials, with strategies for keeping up to date; assessing and improving reference services; guidance on conducting reference interviews with a range of different library users, including children and young adults; a new discussion of reference as programming; important special reference topics such as Google search, 24/7 reference, and virtual reference; and delivering reference services across multiple platforms As librarians

experience a changing climate for all information services professionals, in this book Cassell and Hiremath provide the tools needed to manage the ebb and flow of changing reference services in today's libraries.

BEGINNING CATALOGING

Routledge
Recent field studies of a variety of mammalian species reveal a surprisingly high frequency of infanticide - the killing of unweaned or otherwise maternally dependent offspring. Similarly, studies of birds, fish, amphibians, and invertebrates demonstrate egg and larval mortality in these species, a phenomenon directly analogous to infanticide in mammals. In this collection, Hausfater and Hrdy draw together work on animal and human infanticide and place these studies in a broad evolutionary and comparative perspective. Infanticide presents the theoretical background and taxonomic distribution of infanticide, infanticide in nonhuman primates, infanticide in rodents, and infanticide in humans. It examines closely sex

allocation and sex ratio theory, surveys the phylogeny of mammalian interbirth intervals, and reviews data on sources of egg and larval mortality in a variety of invertebrate and lower vertebrate species. Dealing with infanticide in nonhuman primates, two chapters critically examine data on infanticide in langurs and its broader theoretical implications. By reviewing sources of infant mortality in populations of small mammals and new laboratory analyses of the causes and consequences of infanticide, this work explores such issues as the ontogeny of infanticide, proximate cues of infants and females which elicit infanticidal behavior in males, the genetical basis of infanticide, and the hormonal determinants. Hausfater and Sarah Blaffer Hrdy, through their selection of materials for this book, evaluate the frequency, causes, and function of infanticide. Historical, ethnographic, and recent data on infanticide are surveyed. "Infanticide" summarizes current research on the evolutionary origins and proximate causation of infanticide in animals and

man. As such it will be indispensable reading for anthropologists and behavioral biologists as well as ecologists, psychologists, demographers, and epidemiologists.

An Introduction Libraries Unltd Incorporated

While there are many cataloging texts, very few are written specifically for library support staff. This is the one and only book purposefully aligned with the new American Library Association - Library Support Staff Certification (LSSC) competency standards for Cataloging and Classification. Written in clear language by someone who teaches cataloging in a library support staff program and featuring practical examples, *Cataloging Library Resources: An Introduction* will help library support staff become effective catalogers. Other books on this topic are written for professional librarians rather than support staff. And although 85% of library support staff do not hold professional degrees, many are expected to do the complex and technical work of catalogers. This book provides many examples that support staff can use to learn how

to catalog all types of library print, media, and digital materials using the most up-to-date Library of Congress standards.

Using this handbook as a guide, readers will be able to perform the ALA-LSSC cataloging and classification

competencies and the new RDA, FRBR, and BIBFRAME standards listed below:

- Apply and manage the appropriate processes, computer technology, and equipment for cataloging and classification.
- Apply principles of Resource Description and Access (RDA) and the Functional Requirements for Bibliographic Records (FRBR) when creating cataloging records.
- Apply principles of the Bibliographic Framework Initiative (BIBFRAME) and utilize the BIBFRAME model to create cataloging records.
- Use the basic cataloging and classification tools, both print and online, including bibliographic utilities and format standards.
- Understand the value of authority control and its basic principles, and can identify and apply appropriate access points for personal names, corporate bodies, series, and subjects.
- Explain the value and advantages

of cooperative or collaborative cataloging practices to enhance services.

- Know the basics of standard metadata formats and cataloging rules to select, review, and edit catalog records, and to generate metadata in various formats.
- And more!

Essays at the Front

Rowman & Littlefield

The cataloging and classification field is changing rapidly. New concepts and models, such as linked data, identity management, the IFLA Library Reference Model, and the latest revision of Resource Description and Access (RDA), have the potential to change how libraries provide access to their collections. To prepare library and information science (LIS) students to be successful cataloging practitioners in this changing landscape, they need a solid understanding of fundamental cataloging concepts, standards, and practices: their history, where they stand currently, and possibilities for the future. The chapters in *Cataloging and Classification: Back to Basics* are meant to complement textbooks and lectures so students can go deeper into

specific topics. New and well-seasoned library practitioners will also benefit from reading these chapters as a way to refresh or fill gaps in their knowledge of cataloging and classification. The chapters in this book were originally published as a special issue of the journal, *Cataloging & Classification Quarterly*. Cataloging and Classification American Library Association This is the first book to examine standards specifically as they apply to cataloging and classification, while at the same time considering the field of library science as a whole. The developments in standards detailed in *Cataloging and Classification Standards and Rules* portend great time savings in the cataloging process for those catalogers willing to advocate the necessary programming to their systems officer or bibliographic utility. Standards in the library and information science community underlie and impact the work of librarians and information specialists on a daily basis, yet, remain inconspicuous to even the most knowledgeable in

the field. *Cataloging and Classification Standards and Rules* reviews the state of a full range of formal and informal standards and rules utilized in cataloging and classification. It also provides historical perspective, commentary, assessment of significance, and anticipation of future developments and evaluates the connections and interrelationships that exist among the various standards. Chapters in *Cataloging and Classification Standards and Rules* are written by professionals who have been key figures in the development of standards and have accessed primary source material for the preparation of their articles. They address these: what exactly constitutes a standard how something becomes a standard how standards undergo change evaluation of and commentary on the effectiveness of current standards the latest information on several standards currently in development, testing, or implementation what the future may hold *Cataloging and Classification Standards and Rules* is a valuable reference book for both

beginning and experienced professional librarians. As managers and consumers of bibliographic information, it is crucial that librarians understand the nature and status of a variety of formal and informal standards. This book will assist them in this task. Library school students specializing in cataloging and classification will also find this book an indispensable guide as they prepare themselves for employment in the field.

Anglo-American Cataloging Rules Chicago, Ill : American library association

A new edition of this best-selling textbook reintroduces the topic of library cataloging from a fresh, modern perspective. • Delineates the new cataloging landscape • Shares a principles-based perspective • Provides introductory text for beginners and intermediate students • Emphasizes descriptive and subject cataloging, as well as format-neutral cataloging • Covers new cataloging rules and RDA

AN INTRODUCTION

Routledge

This collection of critical and scholarly essays

addresses the state of cataloging in the world of librarianship. The contributors, including Sanford Berman, Thomas Mann, and numerous front-line library workers, address topics ranging from criticisms of the state of the profession and traditional Library of Congress cataloging to methods of making cataloging more inclusive and helpful to library users. Other essay topics include historical overviews of cataloging practices and the literature they generate, first-person discussions of library workers' experiences with cataloging or metadata work, and the implications behind what materials get cataloged, who catalogs them, and how. Several essays provide a critical overview of innovative cataloging practices and the ways that such practices have been successfully integrated in many of the nation's leading libraries. Instructors considering this book for use in a course may request an examination copy here. *Assessment of Cataloging and Metadata Services* ABC-CLIO

Now thoroughly updated to include recent changes with RDA, this easy-to-use

primer provides an introduction to standardized cataloging that will benefit library technicians as well as students in library technician and teacher librarian programs. • Provides clear and comprehensible explanations of the rules and tools used by libraries to catalog and classify their materials • Illustrative examples for each aspect of cataloging, classification, RDA, and MARC computer encoding • Covers all types of material formats, including books, audiovisuals, images, sound, electronic resources, and more • Offers numerous practical exercises as well as a glossary of cataloging terms and tools

[Introduction to Library Cataloging and Classification](#) ABC-CLIO

The fourth edition of the late Lois Mai Chan's classic *Cataloging and Classification* covers the analysis and representation of methods used in describing, organizing, and providing access to resources made available in or through libraries. Completely updated to incorporate the changes that have occurred during the interval between the third

and fourth editions, this book is the standard text for the teaching and understanding of cataloging and classification.

Building Product Models ABC-CLIO

Covering tools, terminology, and the FRBR-based RDA approach to description, this book explains the current principles of organization of information and basic cataloging practices for non-catalogers, enabling readers to understand elements of the cataloging process and interact with records in a basic manner. • Provides an easy-to-follow, basic understanding of organization of library information and cataloging practice that explains how records are created and offers assistance in applying RDA • Offers valuable insight for non-catalogers (and even non-librarians) into the practices and tools used in organization of information and cataloging by documenting the work that catalogers are now doing • Explains the approaches to organizing different formats of materials in libraries and accounts for the effects of RDA on current cataloging

practices

WYNAR'S

INTRODUCTION TO CATALOGING AND CLASSIFICATION

McGraw-Hill Humanities, Social Sciences & World Languages

A Practical Guide to Library of Congress

Classification is a hands-on introduction to LC

Classification. The book examines each part of the

LCC call number and how it is assembled and guides

the reader through each step of finding and

constructing LCC class

numbers in Classification Web (the primary

resource used to access LCC). Chapter coverage is

complete: 1. Introduction 2. Library of Congress

Classification in a Nutshell 3. Breaking Down the

Library of Congress Call Number 4. Dates 5.

Cutters 6. LCC in Classification Web 7.

Basic LCC Call Number Building 8. Advanced Call

Number Building 9.

Classifying Fiction in LCC 10. Finding and using LCC

Resources Exercises at the end of most chapters

give readers immediate practice with what they

just learned. Answers to the exercises are

provided at the end of the book. By the end of the

book readers will be able to build an LCC call

number on their own.

A Teaching Guide with Illustrations of Major Principles for Descriptive Cataloging and Classification

Libraries Unlimited

Discusses cataloging

rules, subject analysis and headings, classification

systems, bibliographic utilities, and MARC

formats.

Manheimer's Cataloging and

Classification, Revised and Expanded

New York : Haworth Press

This fourth edition

provides an updated look at information

organization, featuring

coverage of the Semantic Web, linked data, and

EAC-CPF; new metadata models such as IFLA-LRM

and RiC, and new

perspectives on RDA and its implementation in the

context of ISBD and

MARC. • Provides an essential overview of

information

organization—a central activity in library and

information science—that describes approaches to

organizing in libraries, archives, museums,

online settings, indexing services, and other

environments • Newly revised and updated to

reflect changes in

cataloging rules, address new standards, and

introduce upcoming

changes • Expands the scope of content relating

to information

organization in non-library settings • Features

vocabulary and acronym lists at the end of each

chapter to help readers stay abreast of new

terminology
