Show Networks and Control Systems, the industry standard since 1994, is both a learning guide for beginners and a reference for experienced technicians. With its unique combined focus on computers, networks, and control systems, the book covers the art and practice of using these tools for live shows such as concerts, theatre productions, theme park attractions, themed-retail installations, cruise ship shows, museum exhibits, interactive media projects, and traditional performing arts. The book offers an in-depth examination of the technology used behind the scenes in lighting, lasers, audio, video, stage machinery, animatronics, special effects, and pyrotechnics and show control, the technique used to interconnect and synchronize two or more show systems. In this extensively revised and updated second edition (after three editions with the previous title, Control

Systems for Live Entertainment), Huntington draws on more than three decades of experience in the field and classroom to clearly explain what goes on behind the scenes and inside the machines that bring bold performances to life in real-world settings.
