This catalogue of the music of Charles Ives contains 728 entries covering all of the prolific composer's works. James Sinclair's book presents information produced by recent Ives scholarship and generous commentary on each of Ives's compositions. It completes the work begun by

musicologist John Kirkpatrick in 1955, when Ives's music manuscripts were deposited in the Yale Music Library. Ives's works are arranged alphabetically by title within genres. Whenever possible, each entry includes the main title and any other titles the composer may have used; the forces required; the duration; headings of movements; publication history; citation of the first known performance and first recording; the derivation of the work, listing music on which it may be modeled or from which it may borrow material; the principal literature treating the piece; and commentary on these and other matters. The catalogue also provides musical incipits for all Ives's extant works, seven appendixes (covering his work lists, 'Quality Photo' lists, his songbooks, a

chronology of his life, recordings made by Ives, and his private publications and commercial publishers), three concordances, and four extensive indexes (addresses, names, titles, and musical borrowings).

Legalization of marijuana is becoming increasingly prominent in the United States and around the world. While there is some discussion of the relationship between marijuana and overall health, a comprehensive resource that outlines the medical literature for several organ systems, as well as non-medical societal effects, has yet to be seen. While all physicians strive to practice evidence-based medicine, many clinicians aren't aware of the facts surrounding cannabis and are guided by public opinion. This first of its kind book is a comprehensive compilation of multiple facets of cannabis recommendation, use and effects from a variety of different perspectives. Comprised of chapters dedicated to separate fields of medicine, this evidence-based guide outlines the current data, or lack thereof, as well as the need for further study. The book begins with a general overview of the neurobiology and pharmacology of THC and hemp. It then delves into various medical concerns that plague specific disciplines of medicine such as psychiatry, cardiology, gastrointestinal and neurology, among others. The end of the book focuses on non-medical concerns such as public health and safety, driving impairment and legal implications. Comprised of case studies and meta-analyses, Cannabis in Medicine: An Evidence-Based Approach provides clinicians with with a concise, evidence-based guide to various health concerns related to the use of marijuana. By addressing non-medical concerns, this book is also a useful resource for professionals working in the public health and legal fields.

This volume provides comprehensive and authoritative coverage of all the main areas linked to

geomagnetic field observation, from instrumentation to methodology, on ground or near-Earth.

Efforts are also focused on a 21st century e-Science approach to open access to all geomagnetic data, but also to the data preservation, data discovery, data rescue, and capacity building. Finally, modeling magnetic fields with different internal origins, with their variation in space and time, is an attempt to draw together into one place the traditional work in producing models as IGRF or describing the magnetic anomalies.

Using qualitative field study, including participant observation and unstructured interviewing, this work focuses on Alcoholics Anonymous as a social world. The social organization of A.A. is linked to social world constructs, and aspects of A.A. social life, both formal and informal, are described. It is suggested that success in A.A. is dependent on integration into the social world, and that there are variations in the interactional processes by which this is achieved. Data is presented to illustrate that integration into the social world leads to the A.A. conversion, a transformation of self-identity in which the alcoholic accepts at the deepest level of being that he or she is alcoholic and that recovery depends on the acceptance of A.A. values and practice of A.A. principles. A typology of A.A. social world participants is established which is informed by high or low levels of affiliative needs and group dependency, group- versus individual-focused social world participation, and affective versus cognitive conversion experiences.

The Reed's VHF DSC Handbook is a user-friendly guide that gets marine VHF radio users quickly up to speed with both the analogue and digital functions on the radio. Sue Fletcher's straightforward explanations and tips describe the leisure craft VHF DSC radio system in detail and its place within GMDSS. Since it was first published it has become the standard work on the subject. Updated to take into account new developments and procedures it provides: all the information required to pass the Short Range Certificate (SRC) - which is compulsory for anyone using a VHF DSC radio; radio procedure, channel allocation, VHF radio theory and more; a full explanation of GMDSS, including details on EPIRBs, SARTs and Navtex; an invaluable onboard reference. The rescue authorities and commercial maritime world now rely almost entirely on DSC for initial contact, so if you need help and want to be heard, a marine VHF DSC radio is essential. 'If you are looking for just one book to explain all marine VHF operating code and procedure, you need look no further... Packed with hints, tips and sound advice, it explains, in the clearest possible way, all one could wish to know about VHF, present and future.' *Yachting Monthly*

How It Works Wiley

As radio developed in the early 1920s, the focus for most people was the AM band and stations such as KDKA, the first broadcast station. There was, however, another broadcast method that was popular among many early enthusiasts--shortwave radio. As is true today, the transmission of news and entertainment programs over shortwave frequencies permitted reception over great distances. For many in America and beyond, shortwave was an exciting aspect of the new medium. Some still tune the shortwave bands to enjoy the programming. Others pursue broadcasts for the thrill of the hunt. This book fully covers shortwave broadcasting from its beginning through World War II. A technical history examining the medium's development and use tells the story of a listener community that spanned the globe. Included are overviews of the primary shortwave stations operating worldwide in the 1930s, along with clubs and competitions, publications and prizes. A rich collection of illustrations includes many QSLs, the cards that stations sent to acknowledge receipt of their transmissions and that are much prized by long-distance collectors.

This unique and informative text describes how stars are classified according to their spectral qualities and temperature. James Kaler explains the alphabet of stellar astronomy, running from cool M stars to hot O stars, and tells the story of their evolution. Before embarking on a voyage of cosmic discovery, the author discusses the fundamental properties of stars, their atomic structure and the

formation of spectra. Then, Kaler considers each star type individually and explores its spectra in detail. A review of unusual, hard-to-classify stars, and a discussion of data related to the birth, life and death of stars round out the text. This book is an important resource for all amateur astronomers and students of astronomy. Professionals will find it a refreshing read as well.

The complexity of biological systems and the need to design and develop biomedical therapies poses major challenges to professionals in the biomedical disciplines. An Introduction to Biomaterials emphasizes applications of biomaterials for patient care. Containing chapters prepared by leading authorities on key biomaterial types, this book underscores the process of biomaterial design, development directed toward clinical application, and testing that leads to therapies for clinical targets. The authors provide a lucid perspective on the standards available and the logic behind the standards in which biomaterials address clinical needs. This volume includes chapters on consensus standards and regulatory approaches to testing paradigms, followed by an analysis of specific classes of biomaterials. The book closes with sections on clinical topics that integrate materials sciences and patient applications.

The Music of Charles Ives Yale University Press

With this innovative analysis of the music of Charles Ives, Philip Lambert fills a significant gap in the literature on one of America's most important composers. Lambert offers the first large-scale theoretical study of Ives's repertoire, encompassing major works in all genres. He argues that systematic techniques governed Ives's compositional language and thinking about music, even in his unconventional and apparently unstructured pieces. He portrays Ives as a composer of great diversity and complexity who nevertheless held to a single artistic vision. Using modes of analysis for post-tonal music and approaches devised specifically for the study of Ives as well, the author explains the origin, evolution, and culmination of Ives's systematic methods. He discusses important aspects of the composer's early training, the relation between Ives's experimental and his concert music, Ives's fugal and canonic techniques as the basis for his systematic music, his paradigms of procedure and transformation, and pitch relations in Ives's music, particularly the unfinished Universe Symphony. Lambert refutes the popular image of Ives as a highly eccentric composer haphazardly casting about for arbitrarily regulated ways of generating musical material and instead portrays him as a keenly determined and resourceful artist who gradually discovered ever more powerful tools for creating remarkably original music.
