In addressing humanitarian crises, the international community has long understood the need to extend beyond providing immediate relief, and to engage with long-term recovery activities and the prevention of similar crises in the future. However, this continuum from short-term relief to rehabilitation and development has often proved difficult to achieve. This book aims to shed light on the continuum of humanitarian crisis management, particularly from the viewpoint of major bilateral donors and agencies. Focusing on cases of armed conflicts and disasters, the authors describe the evolution of approaches and lessons learnt in practice when moving from emergency relief to recovery and prevention of future crises. Drawing on an extensive research project conducted by the Japan International Cooperation Agency Research Institute, this book compares how a range of international organizations, bilateral cooperation agencies, NGOs, and research institutes have approached the continuum in international humanitarian crisis management. The book draws on six humanitarian crises case studies, each resulting from armed conflict or natural disasters: Timor-Leste, South Sudan, the Syrian crisis, Hurricane Mitch in Honduras, the Indian Ocean earthquake and tsunami in Indonesia, and Typhoon Yolanda. The book concludes by proposing a common conceptual framework designed to appeal to different stakeholders involved in crisis management. Following on from the World Humanitarian Summit, where a new way of working on the humanitarian-development nexus was highlighted as one of five major priority trends, this book is a timely contribution to the debate which should interest researchers of humanitarian studies, conflict and peace studies, and disaster risk-management.

### VAISHALI KI NAGARVADHU

Rajkamal Prakashan

Translated by the author 'Tamasdrove the point home that ordinary people want to live in peace' The Guardian Set in a small-town frontier province in 1947, just before Partition, Tamas tells the story of a sweeper named Nathu who is bribed and deceived by a local Muslim politician to kill a pig, ostensibly for a veterinarian. The following morning, the carcass is discovered on the steps of the mosque and the town, already tension-ridden, erupts. Enraged Muslims massacre scores of Hindus and Sikhs, who, in turn, kill every Muslim they can find. Finally, the area's British administrators call out the army to prevent further violence. The killings stop but nothing can erase the awful memories from the minds of the survivors, nor will the various communities ever trust one another again. The events described in Tamas are based on true accounts of the riots of 1947 that Sahni was a witness to in Rawalpindi, and this new and sensitive translation by the author himself resurrects chilling memories of the consequences of communalism which are of immense relevance even today.

The biotechnology/biopharmaceutical sector has tremendously grown which led to the invention of engineered antibodies such as Antibody Drug Conjugates (ADCs), Bispecific T-cell engager (BITES), Dual Variable Domain (DVD) antibodies, and fusion proteins that are currently being used as therapeutic agents for immunology, oncology and other disease conditions. Regulatory agencies have raised the bar for the development and manufacture of antibody-based products, expecting to see the use of Quality by Design (QbD) elements demonstrating an in-depth understanding of product and process based on sound science. Drug delivery systems have become an increasingly important part of the therapy and most biopharmaceuticals for self-administration are being marketed as combination products. A survey of the market indicates that there is a strong need for a new book that will provide “one stop shopping” for the latest information and knowledge of the scientific and engineering advances made over the last few years in the area of biopharmaceutical product development. The new book entitled Development of Biopharmaceutical Drug Device Products is a reference text for scientists and engineers in the biopharmaceutical industry, academia or regulatory agencies. With insightful chapters from experts in the field, this new book reviews first principles, covers recent technological advancements and provides case studies and regulatory strategies relating to the development and manufacture of antibody-based products. It covers topics such as the importance of early preformulation studies during drug discovery to influence molecular selection for development, formulation strategies for new modalities, and the analytical techniques used to characterize them. It also addresses important considerations for later stage development such as the development of robust formulations and processes, including process engineering and modeling of manufacturing unit operations, the design of analytical comparability studies, and characterization of primary containers (pre-filled syringes and vials).Finally, the latter half of the book reviews key considerations to

ensure the development and approval of a patient-centered delivery system design. This involves the evolving regulatory framework with perspectives from both the US and EU industry experts, the role of international standards, design control/risk management, human factors and its importance in the product development and regulatory approval process, as well as review of the risk-based approach to bridging between devices used in clinical trials and the to-be-marketed device. Finally, case studies are provided throughout. The typical readership would have biology and/or engineering degrees and would include researchers, scientific leaders, industry specialists and technology developers working in the biopharmaceutical field.

**Perspectives and Narratives from India** ReadHowYouWant.com

Omprakash Valmiki describes his life as an untouchable, or Dalit, in the newly independent India of the 1950s. "Joothan" refers to scraps of food left on a plate, destined for the garbage or animals. India's untouchables have been forced to accept and eat joothan for centuries, and the word encapsulates the pain, humiliation, and poverty of a community forced to live at the bottom of India's social pyramid. Although untouchability was abolished in 1949, Dalits continued to face discrimination, economic deprivation, violence, and ridicule. Valmiki shares his heroic struggle to survive a preordained life of perpetual physical and mental persecution and his transformation into a speaking subject under the influence of the great Dalit political leader, B. R. Ambedkar. A document of the long-silenced and long-denied sufferings of the Dalits, *Joothan* is a major contribution to the archives of Dalit history and a manifesto for the revolutionary transformation of society and human consciousness.

### AN UNTOUCHABLE'S LIFE

Leadu Publishing

In the idyllic university town, young women daydreamed as they lay on the grass and gazed up at the clouds. Young men took morning walks at Alfred Park. Hot summer afternoons were for drinking sherbet and eating watermelons, and evenings were meant for reading poetry. It was also a time of stifling social mores, and love was an unattainable ideal seldom realized. Allahabad of the 1940s is the serene backdrop to the turbulence of Chander's love for his professor's daughter Sudha. Driven by his passionate belief in the transcending purity of their love, Chander persuades Sudha to marry another man, to devastating consequences. Unhinged by his separation from Sudha and consumed by a restless desire to make sense of love—Is it really about sex? Is the purity of love a lie?—Chander spirals into a destructive affair with the seductive Pammi. Immensely popular since its publication more half a century ago, Chander & Sudha continues to seduce readers with its potent mix of tender passion and heartbreaking tragedy.
