

leaves was determined by using Association of Official Analytical Chemists (AOAC) and the moisture, crude protein, crude fat, total ash, crude fibre and carbohydrate content were determined. Nutrient Composition of Carica Papaya Leaves Extracts Papaya seed oil contained ten detectable fatty acids, of which 78.33% were unsaturated. Oleic (73.5%) acid was the dominant fatty acids followed by palmitic acid (15.8%). Based on the high performance liquid chromatography (HPLC) analysis, seven species of triacylglycerols (TAGs) were detected. Physico-chemical characteristics of papaya (Carica papaya ... DPPH radical scavenging assay. The antioxidant and free radical scavenging activities of the C. papaya flower were determined by using standard method 1,1-diphenyl-2-picryl-hydrazyl (DPPH) assay, as described earlier with some modification [24]. Antioxidant, antibacterial activity, and phytochemical ... Papaya (Carica papaya Linn.) is commonly known for its food and nutritional values throughout the world. The medicinal properties of papaya fruit and other parts of the plant are also well known in traditional system of medicine. Since, each part of papaya tree possesses economic value, it is grown on commercial scale. Review on nutritional, medicinal and pharmacological ... Carica papaya, also called as pawpaw is traditionally cultivated for fruit. Carica papaya belonging to the genus Carica. It contains the enzyme papain, chymopapain which is biologically ... Figure 2: Papaya plant branched. Chemical Composition of Various Parts of Carica Papaya Linn Fruit -protein, fat, fibre, carbohydrates, minerals, ... Medicinal Uses of Carica Papaya Papaya, with a variety of phytochemicals like carotenoids, polyphenols, benzyl isothiocyanates, benzyl glucosinates, prunasin (cyanogenic substrate), papain and chymopapain, alkaloids, phenolic compounds, flavonoids, vitamins (A, C, E), carotenoids, cyanogenicglucosides, cystatin, and glucosinolates exhibits significant health benefits ranging from digestive to immune modulation.

Papaya leaves chemical profiling have been shown so many active components such as papain, chymopapain, cystatin, tocopherol, ascorbic acid, flavonoids, cyanogenic glucoside and glucosinolates [4... Physico-chemical characteristics of papaya (Carica papaya ...

The constituents of C. papaya leaf extract showed twenty constituents, dominated by oleic acid (28.98%) with molecular weight of 282, with the least compound Trans-Geranylacetone (0.17%), with molecular weight of 194. Chemical composition of papaya (Carica papaya) seeds ...

Papaya (Carica papaya L.) Biology and Biotechnology ... An account of the dietary and nutritional composition of papaya, how these vary with culture methods, and secondary metabolites, both beneficial and harmful, and those having medicinal applications, are discussed. An overview of papaya post-harvest is provided, while 'synseed ...

Phytochemical analysis of paw-paw (Carica papaya) leaves.

Carica papaya seeds contain several bioactive compounds with the main ones being enzyme papain and benzylisothiocyanate. 20. In addition, the seeds are rich with other phytochemicals like tannins...

(PDF) Biochemical Constituents in Leaf of Carica papaya ...

Defatted and undefatted seeds of papaya (Carica papaya) were analyzed for proximate composition, some toxicants, sugar composition, mineral content, physico-chemical properties of the seed oil and the fatty acid spectrum of the seed oil. The seed is a rich source of proteins (27.8% undefatted, 44.4% defatted), lipids (28.3% undefatted) and crude fibre (22.6% undefatted, 31.8% defatted).

Chemical Analysis of Carica papaya L. Crude Latex

The proximate composition of the extract made from carica papaya leaves was determined by using Association of Official Analytical Chemists (AOAC) and the moisture, crude protein, crude fat, total ash, crude fibre and carbohydrate content were determined.

CHEMICAL COMPOSITION AND ANTIFUNGAL ACTIVITY OF CARICA ...

The aim of this study was to analyse the chemical composition and examine the antifungal activity of the EO extracted from the seeds of Carica papaya Linn. The papaya seed EO was analysed by gas chromatography-mass spectrometry. The major constituent is benzyl isothiocyanate (99.36%).

ANTIOXIDANT, ANTIBACTERIAL ACTIVITY, AND PHYTOCHEMICAL ...

DPPH radical scavenging assay. The antioxidant and free radical scavenging activities of the C. papaya flower were determined by using standard method 1,1-diphenyl-2-picryl-hydrazyl (DPPH) assay, as described earlier with some modification [24].

NUTRIENT COMPOSITION OF CARICA PAPAYA LEAVES EXTRACTS

Carica papaya is a tropical plant that is traditionally used in the treatment of various ailments including inflammatory conditions. A literature search was conducted by using the keywords "papaya", "anti-inflammatory and inflammation" and "immunomodulation and immune" along with cross-referencing.

Review on nutritional, medicinal and pharmacological ... Phytochemicals are chemical compounds that occur naturally in plants. They are characterized by multilateral pharmacological activity and broad spectrum of therapeutic actions. The qualitative phytochemical analysis of Carica papaya leaves showed the presence of alkaloid, flavonoid, Saponin, Tannin and Glycosides.

Papaya (Carica papaya L.) Biology and Biotechnology Papaya (Carica papaya Linn.) is commonly known for its food and nutritional values throughout the world. The medicinal properties of papaya fruit and other parts of the plant are also well known in traditional system of medicine. Since, each part of papaya tree possesses economic value, it is grown on commercial scale.

CHEMICAL COMPOSITION OF CARICA PAPAYA

Academia.edu is a platform for academics to share research papers. Chemical Constituents and Nutrient Composition of Carica ... The proximate composition (ash, titratable acidity, crude fat, crude fibre, moisture and sugars), soluble solids, ascorbic acid, polyphenol oxidase activity, macro-nutrients and heavy metal contents of storage-ripened papaya (Carica papaya L.) fruits from Mbezi, Dar es Salaam, Tanzania were determined. The determinations were repeated for early, middle and late-season papaya fruits. Anti-inflammatory and immunomodulatory properties of ... Physical and Chemical Composition of Storage-Ripened ...

Carica papaya, also called as pawpaw is traditionally cultivated for fruit. Carica papaya belonging to the genus Carica. It contains the enzyme papain, chymopapain which is biologically ... Figure 2: Papaya plant branched. Chemical Composition of Various Parts of Carica Papaya Linn Fruit -protein, fat, fibre, carbohydrates, minerals, ... (PDF) Chemical composition of papaya | Philippa C...

Papaya, with a variety of phytochemicals like carotenoids, polyphenols, benzyl isothiocyanates, benzyl glucosinates, prunasin (cyanogenic substrate), papain and chymopapain, alkaloids, phenolic compounds, flavonoids, vitamins (A, C, E), carotenoids, cyanogenicglucosides, cystatin, and glucosinolates exhibits significant health benefits ranging from digestive to immune modulation.

Proximate analysis of dried crude latex of. Carica papaya Linn. of papaya CX variety revealed high amount of crude protein (57.24 ± 0.69%) with moisture (17.76 ± 0.09%), ash (7.00 ± 0.01%), crude fat (5.21 ± 0.13%) Table 1. Complete proximate analysis of dried crude latex of Carica papaya L. Sample Code.
