This comprehensive
overview of naturopathic
medicine is easy to use,
well organized,
authoritative, and fun to
read. Organized

alphabetically, the text draws extensively from Woolven's own personal practice as a master herbalist, and from both Snider and Woolven's experiences as respected publishers of *The Natural Path*, a leading source of natural health information. The book's emphasis is on common family ailments, from childhood through the senior years. Each of the over 150 topics covered urges readers to use the body's natural healing power to treat underlying causes of illness. From

colic and ear infections, to the immune system, fibroids, to prostate cancer, vision, rheumatoid arthritis and migraines, the authors provide clear explanations of why the problem exists, what changes to diet and lifestyle may be required to remedy the situation, what current research suggests, and what treatments have proved successful in the past. The authors' easy-to-read and information-packed writing style helps readers feel they are participating in a personal one on one

consultation with holistic experts. Extensive footnotes and references point the way to additional, more specific information when such is required. The book is illustrated with charts and diagrams, and supplemented with an index and bibliography.

The Encyclopedia of Adolescence breaks new ground as an important central resource for the study of adolescence. Comprehensive in breadth and textbook in depth, the Encyclopedia of Adolescence - with entries presented in easy-to-access A to Z format - serves as a reference repository of knowledge in the field as well as a frequently updated conduit of new knowledge long before such information trickles down

from research to standard textbooks. By making full use of Springer's print and online flexibility, the Encyclopedia is at the forefront of efforts to advance the field by pushing and creating new boundaries and areas of study that further our understanding of adolescents and their place in society. Substantively, the Encyclopedia draws from four major areas of research relating to adolescence. The first broad area includes research relating to "Self,

Identity and Development in Adolescence". This area covers research relating to identity, from early adolescence through emerging adulthood; basic aspects of development (e.g., biological, cognitive, social); and foundational developmental theories. In addition, this area focuses on various types of identity: gender, sexual, civic, moral, political, racial, spiritual, religious, and so forth. The second broad area centers on "Adolescents' Social and Personal

Relationships". This area of research examines the nature and influence of a variety of important relationships, including family, peer, friends, sexual and romantic as well as significant nonparental adults. The third area examines "Adolescents in Social Institutions". This area of research centers on the influence and nature of important institutions that serve as the socializing contexts for adolescents. These major institutions include schools, religious groups, justice systems,

medical fields, cultural contexts, media, legal systems, economic structures, and youth organizations. "Adolescent Mental Health" constitutes the last major area of research. This broad area of research focuses on the wide variety of human thoughts, actions, and behaviors relating to mental health, from psychopathology to thriving. Major topic examples include deviance, violence, crime, pathology (DSM), normalcy, risk,

victimization, disabilities, flow, and positive youth development. [Encyclopedia of Lifestyle Medicine and Health](#) Springer Science & Business Media
