A deep dive into Italy's storied league. "An excellent book . . . Anyone with an interest in football beyond the playing pitch will find it fascinating." —Game of the People In the 1980s and 1990s, Serie A was known as "Il campionato più bello del mondo"—the most beautiful championship in the world—and had the highest match attendances in Europe. The stadiums were not only full of people, but full of color, flags, songs and rituals. Italy hosted World Cup 1990 and the stadia and stars on show in Serie A became iconic. Across the ten year period from 1989 to 1999 a remarkable 10 different Serie A clubs occupied nearly half the places in the finals of the Champions League and Europa Cup. They were dominant. But then in the 2000s they began to fall behind and despite the Azzurri winning the World Cup in 2006 and Inter Milan winning the Champions League in 2010, Italian football was on a downwards trajectory that saw the national team fail to qualify for the 2018 World Cup, their first absence from the tournament since 1958. What happened and why? In this extraordinary book, Steven G. Mandis investigates. Given unprecedented behind-the-scenes access to Italian clubs and key

decision makers and players, Mandis is the first outside researcher to rigorously analyze both the on-the-pitch and business aspects of a club and league. What he learns is completely unexpected and challenges popular explanation and conventional wisdom.

Adhesive bonding plays an increasing role in the forest product industry and is a key factor for efficiently utilizing timber and other lignocellulosic resources. As synthetic wood adhesives are mostly derived from depleting petrochemical resources and have caused increasing environmental concern, natural product and byproduct-derived adhesives have attracted much attention in the last decades. Although adhesives made from plant and animal sources have been in existence since ancient times, increased knowledge of their chemistry and improved technical formulation of their preparation are still needed to promote their broader industrial applications. The primary goals of this book are to (1) synthesize the fundamental knowledge and latest research on bio-based adhesives from a remarkable range of natural products and byproducts, (2) identify need areas and provide directions of future bio-based adhesive research, and (3) help integrating research findings in practical adhesive application for maximal benefits. This book covers information on a variety of natural products and byproducts and the latest research on

formulation, testing and improvement of the relevant adhesives in fifteen chapters written by an international group of accomplished contributors. This book will serve as a valuable reference source for university faculty, graduate students, research scientists, agricultural and wood engineers, international organization advocates and government agency regulators who work and deal with enhanced utilization of agricultural and forest products and byproducts.

This book brings together scientists and provides the reader with a comprehensive overview of some recent developments in the field of adhesive bonding with the contributions of internationally recognized authors. This book is divided into three sections: "Structural Adhesive Bonding," "Wood Adhesive Bonding," and "Adhesive Bonding in Medical Applications." Each section

presents an important review and some applications of the adhesive bonding in various different disciplines. I hope that the book published in open access will help researchers to benefit from it.

This book closes a current gap by providing the scientific basis for consumer exposure assessment in the context of regulatory risk assessment. Risk is defined as the likelihood of an event occurring and the severity of its effects. The margin between the dose that leads to toxic effects and the actual dose of a chemical is identified by estimating population exposure. The objective of this book is to provide an introduction into the scientific principles of consumer exposure assessment, and to describe the methods used to estimate doses of chemicals, the statistics applied and computer tools needed. This is presented through the backgrounds of the special fields in exposure analysis, such as exposure via food and by the use of consumer products, toys, clothing and other items. As a general concept, human exposure is also understood to include exposure via the environment and from the work setting. In this context, the specific features of consumer exposure are pointed out and put into the context of regulation, in particular food safety, chemicals safety (REACH) and consumer product safety. The book is structured into three parts: The first part deals with the general concepts of consumer exposure as part of the overall risk analysis framework of risk characterization, risk assessment and risk communication. It describes the three basic features of exposure assessment (i) the exposure scenario (ii) the exposure model and (iii) the exposure

parameters, addressing external and internal exposure. Also, the statistical presentation of data to characterize populations, in connection with variability, uncertainty and quality of information and the presentation of exposure evaluation results is described. The second part deals with the specific issues of exposure assessment, exposure via food consumption, exposure from use of consumer products, household products, toys, cosmetic products, textiles, pesticides and others. This part also covers methods for acquisition of data for exposure estimations, including the relevant information from regulations needed to perform an accurate exposure assessment. The third part portrays a prospect for further needs in the development and improvement of consumer exposure assessment, as well as international activities and descriptions of the work of institutions that are involved in exposure assessment on the regulatory and scientific level. And conversely, it creates the rationale for the exposure assessment details necessary to satisfy regulatory needs such as derivation of upper limits and risk management issues.

The second edition of *Sustainable Buildings and Infrastructure* continues to provide students with an introduction to the principles and practices of sustainability as they apply to the construction sector, including both buildings and infrastructure systems. As a textbook, it is aimed at students taking courses in construction management and the built environment, but it is also designed to be a useful reference for practitioners involved in implementing sustainability in their projects or firms. Case

studies, best practices and highlights of cutting edge research are included throughout, making the book both a core reference and a practical guide.

Global value chains (GVCs) are fraught with the phenomenon of fragmentation and dispersion of production across the world. India presents a unique example with its high potential in manufacturing capability but low integration in GVCs. This book examines the reasons why India has failed to integrate within GVCs so far and looks at key examples to understand the impediments in this process. The chapters bring together case studies from across the manufacturing industry – labour-intensive (garment, paper and diamond), capital-intensive (automobile and petrochemical), and knowledge-intensive (semi-conductor microchip, chemical and pharmaceutical) sectors. Together, they present stories of successful integration of some firms in GVCs as well as the difficulties faced by them. The volume also highlights the importance of GVCs in the context of developing countries in terms of benefits such as income and value generation, knowledge and technology collaborations, and advances in systems and processes. This book will interest scholars and researchers in economics, international trade studies, development economics and business management as well as to practitioners, policymakers, government officials, and those in the corporate sector.

The construction industry is bombarded with ever-changing building materials—components of which are more and more difficult, if not impossible, to identify. Building material emissions have been implicated as a major source of indoor air pollution, and toxic gases, often unidentified, are generated in building fires. *Building Materials: Product Emission and Combustion Health Hazards* undertakes the task of identifying building materials emission and combustion health hazards. This practical guide introduces the complex world of polymers commonly used in building materials along with plasticizers and additives that are not regulated by OSHA. It also explores the topic of building materials as they relate to function and their emissions/combustion products along with thermal decomposition and combustion products as they relate to fire first responders. Engaging environmental professionals, construction

management firms, architects, first respondents, and students, this valuable reference delivers a comprehensive spectrum of knowledge needed to face the challenges of managing building materials in the twenty-first century. Awareness is the first line of defense!

The *Handbook of Adhesive Technology*, Second Edition exceeds the ambition of its bestselling forerunner by reexamining the mechanisms driving adhesion, categories of adhesives, techniques for bond formation and evaluation, and major industrial applications. Integrating modern technological innovations into adhesive preparation and application, this greatly expanded and updated edition comprises a total of 26 different adhesive groupings, including three new classes. The second edition features ten new chapters, a 40-page list of resources on adhesives, and abundant figures, tables, equations.
