One may be getting dangerously close to the tipping point as a result of continued use of energy threatening our very survival. Sustaining meaningful existence and leading a productive life that contributes value, under the circumstances, has become a challenge for the majority of the world population that still suffers deprivation. The book by the eminent author and modern-day Solar reformist, Dr Chetan Singh Solanki, "Energy Swaraj - My Experiments with SOLAR truth" makes a compelling case for localised energy generation & consumption by communities and individuals for sustainability is based on his real-life experiments with Solar and the surrounding truth. - Anil Kakodkar, Former Chairman, Atomic Energy Commission, India.

Wood-polymer composites (WPC) are materials in which wood is impregnated with monomers that are then polymerised in the wood to tailor the material for special applications. The resulting properties of these materials, from lightness and enhanced mechanical properties to greater sustainability, has meant a growing number of applications in such areas as building, construction

and automotive engineering. This important book reviews the manufacture of wood-polymer composites, how their properties can be assessed and improved and their range of uses. After an introductory chapter, the book reviews key aspects of manufacture, including raw materials, manufacturing technologies and interactions between wood and synthetic polymers. Building on this foundation, the following group of chapters discusses mechanical and other properties such as durability, creep behaviour and processing performance. The book concludes by looking at orientated wood-polymer composites, wood-polymer composite foams, at ways of assessing performance and at the range of current and future applications. With its distinguished editors and international team of contributors, Wood-polymer composites is a valuable reference for all those using and studying these important materials. Provides a comprehensive survey of major new developments in wood-polymer composites Reviews the key aspects of manufacture, including raw materials and manufacturing technologies Discusses properties such as durability, creep behaviour and processing performance
