University of Chicago Press

The Bulletin of the Atomic Scientists is the premier public resource on scientific and technological developments that impact global security. Founded by Manhattan Project Scientists, the Bulletin's iconic "Doomsday Clock" stimulates solutions for a safer world.

*The Walrus and the Caribou* National Geographic Books

The mammalian order Carnivora is characterized by an incredible range of morphological, ecological, and behavioral variation. Carnivores can be as small as the 100-gram least weasel or as large as the 800-kilogram polar bear. Their reproductive rate can vary from one offspring every five years, as with some black bears, to three litters a year, as with the dwarf mongoose. Group sizes can be traced along a wide continuum, from the solitary ermine to the monogamous golden jackal to the large extended packs of as many as 80 spotted hyenas. Until recently the general

habits of most wild carnivore species were inadequately understood. In the last decade, however, improved technologies, including the use of radiotelemetry and night-vision scopes, have led to many important discoveries. This book is at once a critical summary and an evaluation of current research on carnivores. A worthy successor to R.F. Ewer's monumental volume, *The Carnivores* (Cornell University Press), it is the work of 30 leading carnivore biologists, who here assemble comparative data on the basic anatomical, behavioral, ecological, physiological, reproductive, and evolutionary characteristics of this group. After a general introduction to the Carnivora, the volume is divided in three parts, each of which begins with a brief introduction outlining its main themes. Part I, Behavior, covers acoustic and olfactory communication, behavioral development, behavioral ecology of canids and hyaenids, modes of solitary living, and group living. In Part II, Ecology, topics include feeding ecology of the giant panda and Asiatic black bear, adaptations for aquatic living, ecological constraints on predation in felids, consequences of small size in mustelids, rate of basal metabolism and food habits, and reproductive output. Part III, Evolution, deals with the morphological approaches to phylogeny, and the fossil record. An appendix presents a complete classification of the Carnivora, including topics of continuing controversy. Highlighting recent developments in the study of the Carnivora and areas for further research, this broad synthesis will be of great value of students and researchers in animal behavior, behavioral ecology, wildlife ecology, mammalogy, paleontology, systematics, and evolution theory. It will also encourage realistic conservation programs to manage rapidly diminishing populations and will elucidate particular features of the carnivores for nonspecialist readers.

#### SOVIET LIFE

University of Chicago Press

In the far north of Canada, daylight disappears for much of the year. This Inuit legend describes how the First People of Canada explained the sun's return to their remote lands.

#### THE RANDOM HOUSE ENCYCLOPEDIA

Graffeg

Track the facts about snow leopards and other amazing wild cats in this nonfiction companion to the bestselling Magic Tree House series! When Jack and Annie came back from their adventure in Magic Tree House #36: Sunlight on the Snow Leopard, they had lots of questions. Where do snow leopards live? Why are they endangered? Which wild cat has the longest fangs? How do lions hunt? Find out the answers to these questions and more as Jack and Annie track the facts about snow leopards and wild cats from all over the world. Filled with up-to-date information, photographs, illustrations, and fun tidbits from Jack and Annie, the Fact Trackers are the perfect way for kids to find out more about the topics they discover in their favorite Magic Tree House adventures. Did you know that there's a Magic Tree House book for every kid? Magic Tree House: Adventures with Jack and Annie, perfect for readers who are just beginning chapter books Merlin Missions: More challenging adventures for the experienced reader Fact Trackers: Nonfiction companions to your favorite Magic Tree House adventures

**The Sphere** Random House Books for Young Readers

Presents the most comprehensive and up-to-date information available on the 36 wild cats of the world. It includes the first published collection of detailed range maps and some of the first photographs of rare species in the wild. It provides a thorough review of major issues in cat conservation such as habitat loss and management of big cats in livestock areas; field and laboratory research; international trade; the role of zoos; and reintroduction. High priority are identified to further the cause of cat conservation.

*Subject Guide to Books in Print* Kids Can Press Ltd

An encyclopedia designed especially to meet the needs of elementary, junior high, and senior high school students.

[The Snow Leopard](#) A to Z (Firefly Books)

A twist on the classic game of Rock Paper Scissors, this story celebrates the differences that make three friends unique.

*Wild Cats* Enthusiast Books

This encyclopedia has become the one indispensable reference for families, students, and businesses across North America. Unmatched in scope and authority, it has been acclaimed for its unique visual appeal and instantly accessible organization.

### ARCTIC A TO Z

Nature Storybooks

This book of photography represents National Geographic's Photo Ark, a major cross-platform initiative and lifelong project by photographer Joel Sartore to make portraits of the world's animals -- especially those that are endangered. His message: to know these animals is to save them. Sartore intends to photograph every animal in captivity in the world. He is circling the globe, visiting zoos and wildlife rescue centers to create studio portraits of 12,000 species, with an emphasis on those facing extinction. He has photographed more than 6,000 already and now, thanks to a multi-year partnership with National Geographic, he may reach his goal. This book showcases his animal portraits: from tiny to mammoth, from the Florida grasshopper sparrow to the greater one-horned rhinoceros. Paired with the prose of veteran wildlife writer Douglas Chadwick, this book presents an argument for saving all the species of our planet.

### NATURE MAGAZINE

Minnesota ... Snowmobile Safety Laws, Rules and Regulations Adair's New Encyclopedia... Ann Arbor Telephone Directories Snow Leopard

A beautifully illustrated dictionary of 26 key aspects of life in the Arctic. World-class photographer and science writer Wayne Lynch takes readers to one of his favorite parts of the world: the Arctic. Using a plant, an animal or a phenomenon for each letter of the alphabet, Lynch describes the unique ways in which systems for living differ where temperature and light can be amazingly extreme. But Lynch also dispels the myth of the Arctic as a perpetually frozen landscape by introducing us to the birds, mammals, insects and plant life that thrive in the short yet glorious sun-filled days of summer.

"Extraordinary. . . . Berger is a hero of biology who deserves the highest honors that science can bestow."—Tim Flannery, *New York Review of Books* On the Tibetan Plateau, there are wild yaks with blood cells thinner than those of horses' by half, enabling the endangered yaks to survive at 40 below zero and in the lowest oxygen levels of the mountaintops. But climate change is causing the snow patterns here to shift, and with the snows, the entire ecosystem. Food and water are vaporizing in this warming environment, and these beasts of ice and thin air are extraordinarily ill-equipped for the change. A journey into some of the most forbidding landscapes on earth, Joel Berger's *Extreme Conservation* is an eye-opening, steely look at what it takes for animals like these to live at the edges of existence. But more than this, it is a revealing exploration of how climate change and people are affecting even the most far-flung niches of our planet. Berger's quest to understand these creatures' struggles takes him to some of the most remote corners and peaks of the globe: across Arctic tundra and the frozen Chukchi Sea to study muskoxen, into the Bhutanese Himalayas to follow the rarely sighted takin, and through the Gobi Desert to track the proboscis-swinging saiga. Known as much for his rigorous, scientific methods of developing solutions to conservation challenges as for his penchant for donning moose and polar bear costumes to understand the mindsets of his subjects more closely, Berger is a guide par excellence. He is a scientist and storyteller who has made his life working with desert nomads, in zones that typically require Sherpas and oxygen canisters. Recounting animals as charismatic as their landscapes are extreme, Berger's unforgettable tale carries us with humor and expertise to the ends of the earth and back. But as his adventures show, the more adapted a species has become to its particular ecological niche, the more devastating climate change can be. Life at the extremes is more challenging than ever, and the need for action, for solutions, has never been greater.

[Canadian Wildlife Service Report Series](#) Red Chair Press

These cats range in size from the small Black-footed Cat, which is only about the size of a housecat, to the large Tiger, which can weigh up to 650 pounds. Other interesting facts include that some cats can purr, while others can roar, and that some cats are nocturnal while others are more active during the day. These cats all have unique characteristics that make them stand out. For example, the cheetah is the fastest land mammal, the snow leopard has extraordinary climbing abilities, and the Bengal cat has an exotic spotted coat. Each cat has different sizes, colors, and behaviors, making them truly fascinating creatures. For example, the Bengal Cat is the most popular breed in the United States, and the Maine Coon is the largest breed of domestic cat. The Siamese is the oldest cat breed, while the American Shorthair is the most popular breed in the United Kingdom. The Ragdoll is known for its friendly and gentle personality, while the Persian is known for its luxurious fur. They have a wide variety of habitats, from the African and Asian jungles, to the Arctic tundra and from the deserts of North America to the woodlands of Europe. Most are solitary animals, some are active at night, and some are extremely social. Some cats can climb trees, others can swim, and some can even purr.

### EXTREME CONSERVATION

Inhabit Media

Our planet is witnessing the sixth mass extinction of species. We are trying to tackle this crisis almost on a war footing, with all the trappings and machinery of combat - fences, guns, protected areas, and a suite of top-down laws and policies. But we haven't been able to stop the bleeding. This book argues that we will not stanch the flow unless we are willing to change our fundamental

attitude towards people - people who live in our last remaining natural areas, whose lives depend on these ecosystems, and who are most affected - negatively - by policies and actions designed to protect biodiversity. To conserve our natural ecosystems and species, we must gain the support of local people. Yet, this is more easily said than done. How does one engage with local communities and garner their support for conservation? Unlike protected areas, whose governance and management have been formalised worldwide, there are no clear-cut frameworks for community-based conservation, no universally accepted guidelines. This book is an attempt to fill that void. It should interest all who care about preserving the earth's wild species and ecosystems. This book is founded on two decades of experience working with local communities to conserve the high mountain habitats of the endangered snow leopard in various parts of Asia - the Himalayas, Altai, Tien Shan, Hindu Kush, Pamirs, and the Tibetan Plateau. Drawing from this wealth of experience, Dr. Charu Mishra and his colleagues at the Snow Leopard Trust distil eight principles of community-based conservation, discussing them with candor and pragmatism. These 'PARTNERS Principles' are a blend of the practical and the ethical.

### ENVIRONMENTAL CHANGE IN SIBERIA

Springer Science & Business Media

A guardian spirit in the form of a snow leopard looks over a small village in the Himalayas, and chooses a human successor, whom she trains to sing songs that will protect the villagers from soldiers who search for gold and slaves.

**Dr. Dobb's Journal** Random House Reference

An illustrated monthly with popular articles about nature.

*The Legend of Ninja Cowboy Bear* World Conservation Union

A Pan-Arctic traditional story, illustrated in Marcus Cutler's fun, kid-friendly style!

*The Photo Ark* Minister of Supply and Services : Available from Printing and Publishing, Supply and Services Canada

A spellbinding new Nature Storybook about one of the most beautiful creatures in the world, with words by Planet Earth producer Justin Anderson and pictures by award-winning Patrick Benson.

"Something moves in the rocks ahead. My hands start to tremble. My heart is beating fast. There, just a few footsteps away, is a snow leopard..." Join us on a journey high into the snowy peaks of the Himalaya, and discover the secret world of a rare and utterly majestic creature - how it has adapted to the harsh environment it lives in and how it looks after its young. Complete with an index and a conservation note, this is a wonderful addition to the series and the debut of an exciting new voice in non-fiction writing for children.

*The Owl and the Lemming*

The Golden Age of snowmobile manufacturing was from 1968-1976 with a gradual slow down leading to 1982. During this time literally hundreds of snowmobile manufacturers sprung up and then disappeared. This book is a look at all the most interesting, rare, or collectible snowmobiles from that time period. The big names like Arctic Cat, Polaris, Ski-Doo, Yamaha, John Deere, Scorpion, Snow-Jet, Mercury, Rupp, Moto-Ski, to the many small-company brands like Allied, Boa Ski, Chaparral, Evinrude, Harley Davidson, Johnson, Polaron, Sears, Skiroule, Sno Prince, Viking, and even includes a chapter of collectible racing snowmobiles in the hobby, like the 1977 Arctic Cat Z that turned Arctic Cats racing program around, and treasures like a 1973 Chaparral grass drag sled or a 1974 Roll-O-Flex called The Wild One. This book would be a benefit to anyone interested in sleds from this time period or looking to buy a more collectible sled from this era.
