Emergency Preparedness Curriculum Springer Publishing Company  
From the San Diego wildfires to multi-drug-resistant strains of bacteria, communities are facing an ever-growing list of potential disasters.

Some events, like pandemic flu or anthrax attacks, are public health emergencies first and foremost. Hurricane Katrina taught us, however, that lack of planning for the frail, elderly, and impoverished population can turn a natural disaster into a healthcare nightmare and lead to needless death and suffering. Emergency managers and public health professionals must integrate their prevention and response efforts to serve their communities most effectively. The

structure of each chapter offers an innovative approach to organizing key information: 1. Case Study or Historical Example 2. Disaster-specific Terms Defined 3. Disaster Description 4. Health Threat (Morbidity and Mortality) 5. Prevention 6. Immediate Actions 7. Recovery or Managing the Aftermath 8. Summary Disasters and Public Health is a crucial tool in planning for and responding to the health impact of any crisis situation. Bruce Clements served over 20 years in

the U.S. Air Force and Air National Guard as a Public Health Officer and a Nuclear, Biological, and Chemical Warfare Defense Instructor, a Hazardous Materials Specialist with an Urban Search and Rescue Team, and as a Safety Officer with a Disaster Medical Assistance Team. He also served as the Public Health Preparedness Director of Missouri in 2006, when the state experienced a record number of disaster declarations. Throughout his years of experience,

he frequently needed to track down a variety of references to quickly understand what was needed for an effective public health response in various situations. He has researched and compiled this information on the health impact of a wide range of disasters into one quick reference. Emergency managers can also no longer afford to be surprised by the next crisis that erupts. This book guides planners in both disciplines in preventing tragedies by most effectively preparing

and responding when disaster strikes. \* Prevent or respond to disasters from terrorism to pandemic flu \* Examine the critical intersection of emergency management and public health \* Benefit from the author's years of experience in emergency response Strategies, Opportunities, and Planning for Recovery Springer Publishing Company This comprehensive resource prepares nurses, nursing students and administrators to provide care to victims of natural

disasters, as well as disasters caused by biological, chemical or radiological agents. It offers vital information on disaster planning, response implementation and management of casualties, as well as post-disaster restoration, treatment of psychological effects of disasters and caring for children and vulnerable populations.

We live in a world where disaster incidents are on the rise. From natural disasters to war and conflict to infectious diseases, being prepared for such events takes tremendous preparation and practice. Nurses are on the frontlines of disaster relief and care, but too few are trained in disaster prep, response, and recovery. Further, too few nurse faculty have personal, real-world experience in responding to natural and man-made disasters. So, where to start? How do nurse

faculty members fit one more thing into a course or curriculum? And how do nurses stay on top of their game when it comes to disaster and emergency preparedness? *Designing and Implementing a Disaster Preparedness Curriculum: Readyng Nurses for the Worst* presents a curriculum blueprint for nurse educators that provides readers with the best practices for implementation while avoiding pitfalls and mistakes. Disaster preparation experts

Sharon Stanley and Thola Wolanski help ensure that nursing students are as prepared as possible to respond to disasters, whether in their own neighborhoods or around the world, by giving nurse educators strategies and solutions for incorporating disaster preparedness into their curriculum. *Charting a Path to Achieve Health Equity* Elsevier Health Sciences Catastrophic disasters occurring in 2011 in the United States and worldwide--from the tornado in Joplin, Missouri,

to the earthquake and tsunami in Japan, to the earthquake in New Zealand--have demonstrated that even prepared communities can be overwhelmed. In 2009, at the height of the influenza A (H1N1) pandemic, the Assistant Secretary for Preparedness and Response at the Department of Health and Human Services, along with the Department of Veterans Affairs and the National Highway Traffic Safety Administration, asked the Institute of

Medicine (IOM) to convene a committee of experts to develop national guidance for use by state and local public health officials and health-sector agencies and institutions in establishing and implementing standards of care that should apply in disaster situations--both naturally occurring and man-made--under conditions of scarce resources. Building on the work of phase one (which is described in IOM's 2009 letter report, *Guidance for Establishing Crisis Standards of Care for Use*

in Disaster Situations), the committee developed detailed templates enumerating the functions and tasks of the key stakeholder groups involved in crisis standards of care (CSC) planning, implementation, and public engagement--state and local governments, emergency medical services (EMS), hospitals and acute care facilities, and out-of-hospital and alternate care systems. *Crisis Standards of Care* provides a framework for a systems approach to

the development and implementation of CSC plans, and addresses the legal issues and the ethical, palliative care, and mental health issues that agencies and organizations at each level of a disaster response should address. Please note: this report is not intended to be a detailed guide to emergency preparedness or disaster response. What is described in this report is an extrapolation of existing incident management practices and principles. Crisis

Standards of Care is a seven-volume set: Volume 1 provides an overview; Volume 2 pertains to state and local governments; Volume 3 pertains to emergency medical services; Volume 4 pertains to hospitals and acute care facilities; Volume 5 pertains to out-of-hospital care and alternate care systems; Volume 6 contains a public engagement toolkit; and Volume 7 contains appendixes with additional resources.

Preparedness, Response and Recovery Considerations for Children and Families is the summary of a workshop convened in June, 2013 by the Institute of Medicine Forum on Medical and Public Health Preparedness for Catastrophic Events to discuss disaster preparedness, response, and resilience relative to the needs of children and families, including children with special health care needs. Traditional and non-traditional medical and

public health stakeholders from across federal, state, and local government health care coalitions, community organizations, school districts, child care providers, hospitals, private health care providers, insurers, academia, and other partners in municipal planning met to review existing tools and frameworks that can be modified to include children's needs; identify child-serving partners and organizations that can be leveraged in planning to improve outcomes for

children; highlight best practices in resilience and recovery strategies for children; and raise awareness of the need to integrate children's considerations throughout local and state emergency plans. Communities across the United States face the threat of emergencies and disasters almost every day, natural and man-made, urban and rural, large and small. Although children represent nearly 25 percent of the U.S. population, current state and local disaster

preparedness plans often do not include specific considerations for children and families. The preparedness and resilience of communities related to children will require a systems framework for disaster preparedness across traditional and non-traditional medical and public health stakeholders, including community organizations, schools, and other partners in municipal planning. This report examines resilience strategies that lead to

successful recovery in children after a disaster and discusses current approaches and interventions to improve recovery in children.

This textbook describes what nurses need to know about pediatric disaster nursing, including public policy, and addresses preparedness for all types of disasters (natural and man-made) and strategies for hospital, school and community preparedness.

The book opens with a brief history of disaster nursing and explains the key differences between pediatric and adult disaster nursing. Recent years have been marked by numerous man-made and natural disasters, which have led nurses to seek new resources to be better prepared, in their role as nurses, for all types of disasters. Responding to this lack of resources, the book focuses on the unique needs of babies and children. It is the first and only textbook on pediatric

disaster preparedness to include both the physical and psychological effects of disaster. Key aspects covered include: the psychosocial differences in and how to approach children; family reunification; medications, supplies and equipment; and decontamination. Given its breadth of coverage, the book is well suited as a textbook for nursing classes, while also offering a valuable resource for nurses working in the field.

The decade ahead will test the nation's nearly 4 million nurses in new and complex ways. Nurses live and work at the intersection of health, education, and communities. Nurses work in a wide array of settings and practice at a range of professional levels. They are often the first and most frequent line of contact with people of all backgrounds and experiences seeking care and they represent the

largest of the health care professions. A nation cannot fully thrive until everyone - no matter who they are, where they live, or how much money they make - can live their healthiest possible life, and helping people live their healthiest life is and has always been the essential role of nurses. Nurses have a critical role to play in achieving the goal of health equity, but they need robust education, supportive work environments, and autonomy. Accordingly, at the request of the Robert

Wood Johnson Foundation, on behalf of the National Academy of Medicine, an ad hoc committee under the auspices of the National Academies of Sciences, Engineering, and Medicine conducted a study aimed at envisioning and charting a path forward for the nursing profession to help reduce inequities in people's ability to achieve their full health potential. The ultimate goal is the achievement of health equity in the United States built on strengthened nursing

capacity and expertise. By leveraging these attributes, nursing will help to create and contribute comprehensively to equitable public health and health care systems that are designed to work for everyone. The Future of Nursing 2020-2030: Charting a Path to Achieve Health Equity explores how nurses can work to reduce health disparities and promote equity, while keeping costs at bay, utilizing technology, and maintaining patient and

family-focused care into 2030. This work builds on the foundation set out by The Future of Nursing: Leading Change, Advancing Health (2011) report.

The effects of a disaster on healthcare can range from conditions that immediately besiege the system with large numbers of patients, to catastrophes that strain its long-term sustainability. Nurses, as

frontline health professionals, must have an understanding of the situations they may face before, during and after a disaster and they must develop the skills and strategies to provide effective and immediate care. International Disaster Nursing is the first truly comprehensive and internationally focused resource to address the diversity of issues and myriad scenarios that nurses and other health personnel could encounter during a disaster event. This text

defines the many roles of the nurse within a multidisciplinary team, and aids the implementation of the community's disaster plans in a crisis. With an alarming increase in the occurrence of disasters in the last decade, International Disaster Nursing is the hallmark text in the field.
