*Valuing Professional Practices and Licenses* Van Haren

The secret of achieving and sustaining organizational excellence revealed In an ever-changing world where only a third of excellent organizations stay that way over the long term, and where even fewer are able to implement successful change programs, leaders are in need of big ideas and new tools to thrive. In *Beyond Performance*, McKinsey & Company's Scott Keller and Colin Price give you everything you need to build an organization that can execute in the short run and has the vitality to prosper over the long term. Drawing on the most exhaustive research effort of its kind on organizational effectiveness and change management, Keller and Price put hard science behind their big idea: that the health of an organization is equally as important as its performance. In the book's foreword, management guru Gary Hamel refers to this notion as "a new manifesto for thinking about organizations." The authors illustrate why copying management best practices from other companies is more dangerous than helpful. Clearly explains how to determine the mutually reinforcing combination of management practices that best fits your organization's context. Provides practical tools to achieve superior levels of performance and health through a staged change process: aspire, assess, architect, act, and advance. Among these are new techniques for dealing with those aspects of human behavior that are seemingly irrational (and therefore confound even the smartest leaders), yet entirely predictable. Ultimately, building a healthy organization is an intangible asset that competitors copy at their peril and that enables you to skillfully adapt to and shape your environment faster than others—giving you the ultimate competitive advantage.

Engaging Change addresses current challenges such as how to understand the environmental context driving the need for change; how to initiate and sustain momentum throughout the change programme; how to institutionalize structural and behavioural change; and how to create compelling visions. With case studies from Sony, Nestlé, Redcats (who own La Redoute, for example) and the British Army, the text provides practice-based insights into the realities of leading sustainable change.

A People-Centred Approach to Business Transformation IGI Global Master's Thesis from the year 2017 in the subject Business economics - Marketing, Corporate Communication, CRM, Market Research, Social Media, grade: 1,3, University of applied sciences, Munich, language: English, abstract: The automotive industry is facing the biggest changes in its more than 100 years of existence. At the end of this decade, the first electric vehicle is going to enter the mass market that can compete on product features, comfort and price with the internal combustion engines. People keep moving into urban areas. The requirements toward future mobility increase. Some countries already decided to prefer electric vehicles to conventional cars. Profits will shift to other markets or segments. Incumbents must align their current strategies to keep their market share in the future and participate in future profit pools of the automotive industry. BMW and Tesla have different strategic approaches to the upcoming changes in the industry. BMW, as many other OEMs, is aware of future challenges and disruptive forces and has much more resources to manage the required investments in R&D than smaller start-ups. However, disruptive forces come from lower functionality and low-cost products that are usually overlooked by dominant firms in an industry. This research analyzes the two automotive companies BMW and Tesla by using the common strategy analysis tools.

First, the firms' external environment is analyzed by using the PESTEL analysis, describing relevant trends that affect the strategic decision of the two companies. An industry overview with future projections is provided. Secondly, an internal analysis is performed. SWOT analysis and the VRIO framework form the basis to define the strengths, weaknesses, unique recourses and capabilities of BMW and Tesla. The conclusion provides an overall discussion of the most important findings emerging from the analysis with regard to the business operations and the existing business models of the two car manufacturers. Furthermore, important implications for the adaption and adjustment processes are discussed.
