**EARTH RESISTIVITY TEST REPORT** 1 Soil Resistivity Testing Earthing1. Soil Resistivity Testing 1.1 INTRODUCTION It is well known that the resistance of an earth electrode is heavily influenced by the resistivity of the soil in which it is driven and as such, soil resistivity measurements are an important parameter when designing earthing installations. A knowledge of the soil resistivity at the intended site ...1. Soil Resistivity TestingNow, for example, if your instrument reading is 60 Ω, the earth resistivity would be 60 x 766, or 45,960 ohm-cm. Fig. 1: Four-terminal method of measuring earth resistivity  $1B = 1/20A$  is generally recommended SECTION I Earth Resistivity The term "earth resistivity" expressed in ohm-centimeters (abbreviatedA practical guide to earth resistance testingThe basic premise of the soil resistivity test is that probes spaced at 5' distance across the earth, will read 5' in depth. The same is true if you space the probes 40' across the earth, you get a weighted average soil resistance from 0' down to 40' in depth, and all points in between.What Is Soil Resistivity Testing? - E&S Grounding SolutionsTo test soil resistivity, connect the ground tester as shown in Fig. 1. Four earth ground stakes are positioned in the soil in a straight line, equidistant from one another. The distance between earth ground stakes should be at least three times

Soil resistivity Soil resistivity ( $\rho$ ) is expressed in Ohm x metres ( $\Omega$ .m). This corresponds to the theoretical resistance in Ohms of a cylinder of earth with a cross-section area of 1 m<sup>2</sup> and a length of 1 m. By measuring it, you can find out how well the soil conducts electric currents. So the lower the resistivity, the lower the Earth/ground resistance and soil resistivity testers Soil quality varies greatly with depth and over wide areas. Soil classification provides only a rough approximation. Many factors can change the resistivity measurements of soil some of which include moisture, temperature, type, and depth. Moisture tends to enhance soil conductivity. Soil Resistivity 101 - by ALLTECThe earthing rod is 4 meter long and having 12.2mm diameter, soil resistivity 500  $\Omega$  meter.  $R = 500 / (2 \times 3.14 \times 4) \times (\text{Loge}(8 \times 4 / 0.0125) - 1) = 156.19 \Omega$ .
