ENCYCLOPEDIE METHODIQUE

Springer Science & Business Media
The series is aimed specifically at publishing peer reviewed reviews and contributions presented at workshops and conferences. Each volume is associated with a particular conference, symposium or workshop. These events cover various topics within pure and applied mathematics and provide up-to-date coverage of new developments, methods and applications.

The Orbit Method in Geometry and Physics De Gruyter

Vous êtes intéressé(e) par le crochet ?
Vous recherchez un nouveau passe-temps ? Vous souhaitez offrir à vos enfants ou vos amis vos créations les plus réussies ? Avec Le Crochet pour les Nuls, découvrez le B.A.-ba du crochet de façon claire et illustrée : achetez le bon matériel pour bien démarrer, apprenez les points de crochet des plus basiques aux plus sophistiqués grâce aux 250 illustrations et pas à pas, jouez avec les couleurs, frottez-vous aux techniques plus complexes (par exemple, du crochet tunisien) et inspirez-vous des nombreux exemples d'ouvrages contenus dans ce livre. Avec les Nuls, devenez un(e) as du crochet ! Un grand merci à la filature Fonty pour les laines utilisées dans le cahier couleur.

Approximations Diophantiennes et Nombres Transcendants. Diophantine Approximations and Transcendental Numbers John Wiley & Sons

This volume contains lectures given at the Saint-Flour Summer School of Probability Theory during 17th Aug. - 3rd Sept. 1998. The contents of the three courses are the following: - Continuous martingales on differential manifolds. - Topics in non-parametric statistics. - Free probability theory. The reader is expected to have a graduate level in probability theory and statistics. This book is of interest to PhD students in probability and statistics or operators theory as well as for researchers in all these fields. The series of lecture notes from the Saint-Flour Probability Summer School can be considered as an encyclopedia of probability theory and related fields.

Canadian Journal of Mathematics

Springer Science & Business Media
The papers, some of which are in English, the rest in French, in this volume are based on lectures given during the meeting of the Seminaire Sud Rhodanien de Geometrie (SSRG) organized at the Mathematical Sciences Research Institute in 1989. The SSRG was established in 1982 by geometers and mathematical physicists with the aim of developing and coordinating research in symplectic geometry and its applications to analysis and mathematical physics. Among the subjects discussed at the meeting, a special role was given to the theory of symplectic groupoids, the subject of fruitful collaboration involving geometers from Berkeley, Lyon, and Montpellier.

An updated classic covering the latest techniques and trends in crocheting Are you hooked on the art of crochet? Looking for a fun new hobby that you can take with you virtually anywhere? Crocheting For Dummies, 2nd Edition gives you easy-to-understand instructions on how to choose the right tools, create basic stitches, and finish off your work to make beautiful pieces of art. From learning to create consistency with gauge swatch to decoding crochet patterns, symbols, and diagrams, this easy-to-follow guide is all you need to

start creating beautiful designs in no time! This revised edition contains completely new content, including fresh new patterns, stitches, and techniques reflecting crocheting styles from around the world. Plus, it's packed with new and refreshed photos and line art throughout, along with step-by-step instructions that will easily guide you from your first stitch to your first sweater. A new section covering common crocheting mistakes and how to correct them Crocheting with eco-awareness: using organic yarns, as well as free trade and sustainably sourced fibers The best resources for purchasing supplies, as well as choosing and buying patterns Whether you're a first-time crocheter or looking to expand your skills, Crocheting For Dummies, 2nd Edition gives you the skills, techniques, and confidence to crochet like a pro.

**HOKKAIDO MATHEMATICAL
JOURNAL**

Springer Science & Business Media Acoustics and the Performance of Music connects scientific understandings of acoustics with practical applications to musical performance. Of central importance are the tonal characteristics of musical instruments and the singing voice including detailed representations of directional characteristics. Furthermore, room acoustical concerns related to concert halls and opera houses are considered. Based on this, suggestions are made for musical performance. Included are seating arrangements within the orchestra and adaptations of performance techniques to the performance environment. In the presentation we dispense with complicated mathematical connections and deliberately aim for conceptual explanations accessible to musicians,

particularly for conductors. The graphical representations of the directional dependence of sound radiation by musical instruments and the singing voice are unique. Since the first edition was published in 1978, this book has been completely revised and rewritten to include current research. This translation corresponds to the latest (fifth) German edition (2004), which has become a standard reference work for audio engineers and scientists. Acoustics and the Performance of Music addresses issues that are of interest to acousticians, orchestra performers and conductors, audio engineers, architects. Researchers and students of musical acoustics will also find this text valuable.

comptes-rendus du colloque tenu au C.I.R.M de Luminy 18-22 juin 1990

Springer
Contents of 1-14 (1966/67-1978/79) in v. 15 (1979/80).

Operations Research. Recherche opérationnelle Springer

Researchers and graduate students in the theory of stochastic processes will find in this 35th volume some thirty articles on martingale theory, martingales and finance, analytical inequalities and semigroups, stochastic differential equations, functionals of Brownian motion and of Lévy processes. Ledoux's article contains a self-contained introduction to the use of semigroups in spectral gaps and logarithmic Sobolev inequalities; the contribution by Emery and Schachermayer includes an exposition for probabilists of Vershik's theory of backward discrete filtrations.

NAGOYA MATHEMATICAL JOURNAL

Springer Science & Business Media
The series is aimed specifically at publishing peer reviewed reviews and

contributions presented at workshops and conferences. Each volume is associated with a particular conference, symposium or workshop. These events cover various topics within pure and applied mathematics and provide up-to-date coverage of new developments, methods and applications.

Approximations diophantiennes et nombres transcendants

First Dedicated to Jacques Carmona, an expert in noncommutative harmonic analysis, the volume presents excellent invited/refereed articles by top notch mathematicians. Topics cover general Lie theory, reductive Lie groups, harmonic analysis and the Langlands program, automorphic forms, and Kontsevich quantization. Good text for researchers and grad students in representation theory.

□□□□□□□□ lahs

The orbit method influenced the development of several areas of mathematics in the second half of the 20th century and remains a useful and powerful tool in such areas as Lie theory, representation theory, integrable systems, complex geometry, and mathematical physics. Among the distinguished names associated with the orbit method is that of A.A. Kirillov, whose pioneering paper on nilpotent orbits (1962), places him as the founder of orbit theory. The original research papers in this volume are written by prominent mathematicians and reflect recent achievements in orbit theory and other closely related areas such as harmonic analysis, classical representation theory, Lie superalgebras, Poisson geometry, and quantization. Contributors: A. Alekseev, J. Alev, V. Baranovksy, R. Brylinski, J. Dixmier, S. Evens, D.R. Farkas, V. Ginzburg, V. Gorbounov, P. Grozman, E.

Gutkin, A. Joseph, D. Kazhdan, A.A. Kirillov, B. Kostant, D. Leites, F. Malikov, A. Melnikov, P.W. Michor, Y.A. Neretin, A. Okounkov, G. Olshanski, F. Petrov, A. Polishchuk, W. Rossmann, A. Sergeev, V. Schechtman, I. Shchepochkina. The work will be an invaluable reference for researchers in the above mentioned fields, as well as a useful text for graduate seminars and courses.
