Record, arrange, mix, produce, and polish your music with this best-selling, Apple-certified guide to Logic Pro X 10.5. Veteran producer and composer David Nahmani uses step-by-step, project-based instructions and straightforward explanations to teach everything from basic music creation to sophisticated production techniques. Learn to populate, trigger, and record Live Loops into cells, record audio and MIDI data, create and edit sequences, and edit regions in the Tracks view to build an arrangement. You'll create both acoustic and electronic virtual drum performances using Drummer tracks with Drum Kit Designer and Drum Machine Designer. You'll use Quick Sampler to create an instrument from a single sample to create stutter effects and vocal chop, and explore ear candy production techniques, such as parallel processing and turntable start and stop effects. You'll use Logic Pro X MIDI FX and Smart Controls to control software synthesizers from a MIDI controller or an iPad. You'll harness the power of Smart Tempo to make all audio files play in time. You'll stretch vocal notes and correct timing of recordings with Flex Time, and you'll explore Flex Pitch to tune a vocal recording. Finally, you'll mix, automate and master the song, processing your tracks with EQ, compression, delay, reverb and other effect plug-ins to achieve a professional sound. Downloadable lesson and media files take you step by step through real-world, hands-on exercises. Accessible writing style puts an expert instructor at your side. Ample illustrations help you master techniques fast. Lesson goals and time estimates help you plan your time. Key Command lists summarize keyboard shortcuts used in each

lesson to speed up your workflow. The Apple Pro Training Series is a self-paced learning tool and Apple's official guide for Logic Pro X. Books in this series also include downloadable lesson files and an online version of the book. Additional information on this and other books in this series can be found at www.peachpit.com/apple. Working effectively with Apple platforms at a corporate or business level includes not only infrastructure, but a mode of thinking that administrators have to adopt to find success. A mode of thinking that forces you to leave 30 years of IT dogma at the door. This book is a guide through how to integrate Apple products in your environment with a minimum of friction. Because the Apple ecosystem is not going away. You'll start by understanding where Apple, third-party software vendors, and the IT community is taking us. What is Mobile Device Management and how does it work under the hood. By understanding how MDM works, you will understand what needs to happen on your networks in order to allow for MDM, as well as the best way to give the least amount of access to the servers or services that's necessary. You'll then look at management agents that do not include MDM, as well as when you will need to use an agent as opposed to when to use other options. Once you can install a management solution, you can deploy profiles on a device or you can deploy profiles on Macs using scripts. With Apple Device Management as your guide, you'll customize and package software for deployment and lock down devices so they're completely secure. You'll also work on getting standard QA environments built out, so you can test more effectively with less effort. Apple is forging their own path in IT. They trade spots with Amazon, Google, and Microsoft as the wealthiest company to ever exist. And they will not be constrained by 30 or more years of dogma in the IT industry. You can try to shoehorn Apple devices into outdated modes of device management, or you can embrace Apple's stance on management with the help of this book. What You'll Learn Deploy profiles across devices effectively and securely Install apps remotely both from the app store and through custom solutions Work natively with Apple environments

rather than retrofitting older IT solutions Who This Book Is For Mac administrators within organizations that want to integrate with the current Apple ecosystem, including Windows administrators learning how to use/manage Macs, mobile administrators working with iPhones and iPads, and mobile developers tasked with creating custom apps for internal, corporate distribution.
