### PORTER QUINTIN

**Houses of Cards** The Museum of Modern Art  
Five Architects, originally published in 1975, grew out of a meeting of the CASE group (Conference of Architects for the Study of the Environment) held at the Museum of Modern Art in 1969. The purpose of this gathering was to exhibit and criticize the work of five architects -- Eisenman, Graves, Gwathmey, Hejduk, and Meier -- who constituted a New York school, and who are now among the most influential architects working today.The buildings shown here have more diversity than one might expect from a school, but share certain properties of form, scale, and treatment of material. Collectively, their work makes a modest claim: it is only architecture, not the salvation of man and the redemption of the earth.Providing complete drawings and photographic documentation, this collection also includes a comparative critique by Kenneth Frampton, an Introduction by Colin Rowe that suggests a still broader context for the work as a whole, and two short texts in which individual positions are outlined. Now back in,print, Five Architects serves as a reference to the early work of some of America’s most important architects and provides us with a glimpse back at the direction of architecture as they saw it over twenty years ago.

### PALLADIO VIRTUEL

Cambridge Scholars Publishing  
Using time as a unifying theme, this book critically analyses many of the key concepts in modern architecture and urban design, such as modernity, innovation, timelessness and sustainability. Drawing on the statements of contemporary architects and with reference to a wide range of sources from history, philosophy, sociology and anthropology, as well as studies in diverse subjects such as science fiction, colonialism and archaeology, the text provides a new perspective on much of the thinking behind contemporary design. In addition, it develops original and practical theories on the

meanings of modernity, the variable ageing of the environment, the central role of longevity in sustainability, the significance of authenticity in conservation, and the relationship between collective memory and tradition.

*Design, Fiction, and Social Dreaming* Books Nippan

A presentation of writings by and about Peter Eisenman, arguably the most significant architect working today. The book analyzes the whole spectrum of subjects covered in the architect/philosopher's oeuvre. Seminal texts are included that show how his theories have developed over time.

Urban Laboratory, Paradigm or Trajectory? Getty Publications

The Getty Research Journal is a periodical that showcases work by scholars and staff associated with the Getty Research Institute and the other programs of the J. Paul Getty Trust. It offers refereed essays that focus on an object or aspect of the Getty's extensive archival, rare book, and artistic holdings or that bear upon the annual research themes of the Research Institute or the Getty Villa. It also presents a selection of short, lively pieces about new acquisitions, scholarly activities, and ongoing research projects at the Getty. The second issue features essays by Gail Feigenbaum, Claire Fox, Sarah E. Fraser, Talinn Grigor, Karen J. Lloyd, Kristina Luce, Courtney J. Martin, and Irene Sun-Woo; the short texts examine materials related to Roman graves, painters' prices in seventeenth-century Rome, Giovanni Battista Piranesi's Prisons series, the alchemist Sigismund Bacstrom, a nineteenth-century Venetian picture gallery, Goupil & Cies stock books, the Beau Geste Press, the photography of Sam Wagstaff, and the transgressive techniques of the Guerrilla Girls. It closes with new work by photographer Ken Gonzales-Day.

*The City of Culture of Galicia* Taylor & Francis

Peter Eisenman is an internationally recognized architect and educator. For more than a half century, he has profoundly influenced generations of

academics and practitioners with his buildings, writing, and teaching. By developing formal and linguistic critiques of architecture's bourgeois conventions, his activism seeks to undermine authority by creating architecture demanding close attention. By *Other Means* traces Eisenman's evolution from his formative years to his well-known Houses series and beyond. Unpublished work from his undergraduate, master's, and doctoral studies reveal an 'Eisenman before Eisenman'. This material is printed along with correspondence from Colin Rowe, ephemera from the Institute for Architecture and Urban Studies, and previously unseen sketches/diagrams for Houses I, II, VI, and X. Featuring drawings and ephemera relating to various projects and proposals in the United States (e.g. Princeton and New York) and Europe (e.g. Liverpool and Venice). This book is published on the occasion of the exhibition *By Other Means*, curated by Mathew Ford with Jeffrey Kipnis as part of Time- Space - Existence, organized by GAA- Foundation at the Palazzo Bembo in Venice, Italy, for the 15th International Architecture Exhibition, May 28 - November 27, 2016. Eisenman is most well known for his iconic and controversial design of the Memorial to the Murdered Jews of Europe (Holocaust Memorial) in Berlin, 2003/04.

**Ten Canonical Buildings 1950-200** Peter Eisenman's House VI The Client's Response

Peter Eisenman's competition-winning project for the City of Culture of Galicia in Santiago de Compostela, Spain, is a formidable battery of museums, libraries, and auditoriums, a cultural acropolis atop a spectacular hillside site in northeastern Spain. By excavating the hilltop and arranging six buildings as a kind of artificial topography, Eisenman creates a new warped landscape that seems to merge building and ground, that occupies the hilltop without seeming to have been built upon it. In CODEX, the New York-based Eisenman, known for a career of formal investigations, reveals in essays and illustrations his theory of coding as a device for producing form. Through more than three hundred line drawings and perspectives, the development of the code--and the buildings and landscape it informs--becomes apparent, culminating in a giant earthwork as excavation of the site begins.

### FIVE ARCHITECTS

Yale University Press

Gathers drawings and models for six house designs, shows the finished buildings, and offers the author's comments on architectural design

### SPECULATIVE EVERYTHING

New York : Oxford University Press

Based on an exhibit opening in 1977 at the Cooper-Hewitt Museum and entitled: 200 years of American architectural drawing.

*Essays on Virtual and Real Space* Whitney Library of Design

Architecture and sociology have been fickle friends over the past half century: in the 1960s, architects relied on sociological data for design solutions and sociologists were courted by the most prestigious design schools to lecture and teach. Twenty years later, at the height of postmodernism, it was passe to be concerned with the sociological aspects of architecture. Currently, the rising importance of sustainability in building, not to mention an economical crisis brought on in part by a real-estate bubble, have forced architects to consider themselves in a less autonomous way, perhaps bringing the profession full circle back to a close relationship with sociology. Through all these rises and dips, Robert Gutman was a strong and steady voice for both architecture and sociology. Gutman, a sociologist by training, infiltrated architecture's ranks in the mid-1960s and never looked back. A teacher for over four decades at Princeton's School of Architecture, Gutman wrote about architecture and taught generations of future architects, all while maintaining an "outsider" status that allowed him to see the architectural profession in an insightful, unique way.

*Plans, Sections and Elevations* Routledge

In the years of reconstruction and economic boom that followed the Second World War, the domestic sphere encountered new expectations regarding social behaviour, modes of living, and forms of dwelling. This book brings together an international group of scholars from architecture, design, urban planning, and interior design to reappraise mid-twentieth century modern life, offering a timely reassessment of culture and the economic and political effects on civilian life. This collection contains essays that examine the material of art, objects, and spaces in the context of practices of dwelling over the long span of the postwar period. It asks what role material objects, interior spaces, and architecture played in quelling or fanning the anxieties of modernism's ordinary denizens, and how this role informs their legacy today.

*Wexner Center for the Visual Arts* Rizzoli International Publications

*Inside Architecture* is a concise, insightful examination of the role the modernist project has played in late twentieth-century building, as well as an attempt to reconcile the dilemmas and shortcomings of modern orthodoxy with a renewed vision of modernism. Gregotti first identifies the elements of mass culture and public institutions that have led to the deterioration of natural and man-made environments. He then investigates eight issues - precision, technique, monumentality, modification, atopia, simplicity, procedure, and image - that influence the activities of contemporary architects. Gregotti is particularly suspicious of the deconstructivist argument and its heavy reliance on literary models. And he provides an incisive critique of the recent interest in modernist aesthetics, warning against reviving the forms of an old movement without considering the cultural and social criteria that once gave it purpose and meaning.

Through Eisenman's own essays and through extensive illustration, readers come to understand Eisenman's diagram-based approach to design whereby sites and structures can be manipulated in diagram form.--BOOK JACKET.

### ARCHITECTURE TALKS BACK

Mit Press

Uses the architectural design of a house to show the principles of structuralism and a possible reaction against traditional functionalism

*The Function of the Oblique* Taylor & Francis

"A book of pen-and-ink drawings by artist, poet, and fiction writer, Renee Gladman"--

Routledge

This book is a critical reflection on the Smart City Mission in India. Drawing on ethnographic data from across Indian cities, this volume assesses the transformative possibilities and limitations of the program. It examines the ten core infrastructural elements that make up a city, including water, electricity, waste, mobility, housing, environment, health, and education, and lays down the basic tenets of urban policy in India. The volume underlines the need to recognize liminal spaces and the plans to make the 'smart city' an inclusive one. The authors also look at maintaining a link between the older heritage of a city and the emerging urban space. This volume will be of great interest to planners, urbanists, and policymakers, as well as scholars and researchers of urban studies and planning, architecture, and sociology and social anthropology.

### PERFECT ACTS OF ARCHITECTURE

010 Publishers

Peter Eisenman is one of the most controversial protagonists of the architectural scene, who is known as much for his theoretical essays as he is for his architecture. While much has been written about his built works and his philosophies, most books focus on one or the other aspect. By structuring this volume around the concept of form, Stefano Corbo links together Eisenman's architecture with his theory. From Formalism to Weak Form: The Architecture and Philosophy of Peter Eisenman argues that form is the sphere of mediation between our body, our inner world and the exterior world and, as such, it enables connections to be made between philosophy and architecture. From the start of his career on, Eisenman has been deeply interested in the problem of form in architecture and has constantly challenged the classical concept of it. For him, form is not simply a cognitive tool that determines a physical structure, which discriminates all that is active from what is passive, what is inside from what is outside. He has always tried to connect his own work with the cultural manifestations of the time: firstly under the influence of Colin Rowe and his formalist studies; secondly, by re-interpreting Chomsky's linguistic theories; in the 80's, by collaborating with Derrida and his de-constructivist approach; more recently, by discovering Henri Bergson's idea of Time. These different moments underline different phases, different projects, different programmatic manifestos; and above all, an evolving notion of form. Taking a multi-disciplinary approach based on the intersections between architecture and philosophy, this book investigates all these definitions and, in doing so, provides new insights into and a deeper understanding of the complexity of Eisenman's work.

**Lateness** Mimesis

Details the master architectural design plan currently being implemented at the University of Oregon, illustrating the participation of all members of a small community in the designing of their own environment

*Diagram Diaries* Universe Pub

Essays at the intersection of philosophy and architecture explore how we understand and inhabit space. To be outside allows one a fresh perspective on the inside. In these essays, philosopher Elizabeth Grosz explores the ways in which two disciplines that are fundamentally outside each other—architecture and philosophy—can meet in a third space to interact free of their internal constraints. "Outside" also refers to those whose voices are not usually heard in architectural discourse but who inhabit its space—the destitute, the homeless, the sick, and the dying, as well as women and minorities. Grosz asks how we can understand space differently in order to structure and inhabit our living arrangements accordingly. Two themes run throughout the book: temporal flow and sexual specificity. Grosz argues that time, change, and emergence, traditionally viewed as outside the concerns of space, must become more integral to the processes of design and construction. She also argues against architecture's historical indifference to sexual specificity, asking what the existence of (at least) two sexes has to do with how we understand and experience space. Drawing on the work of such philosophers as Henri Bergson, Roger Caillois, Gilles Deleuze, Jacques Derrida, Luce Irigaray, and Jacques Lacan, Grosz raises abstract but nonformalistic questions about space, inhabitation, and building. All of the essays propose philosophical experiments to render space and building more mobile and dynamic.
