This title focuses on 20th-century Chicago from the era of the race riot to cast a new light on Chicago's youth gangs and to place youths at the centre of the 20th-century American experience.

*Introduction to Probability* William Andrew

Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

This is the first comprehensive book on the engineering of diamond optical devices. Written by 39 experts in the field, it gives readers an up-to-date review of the properties of optical quality synthetic diamond (single crystal and nanodiamond) and the nascent field of diamond optical device engineering. Application areas covered in detail in this book include quantum information processing, high performance lasers and light sources, and bioimaging. It provides scientists, engineers and physicists with a valuable and practical resource for the design and development of diamond-based optical devices.

"Fascinating.... Lays a foundation for understanding human history."—Bill Gates In this "artful, informative, and delightful" (William H. McNeill, New York Review of Books) book, Jared Diamond convincingly argues that geographical and environmental factors shaped the modern world. Societies that had had a head start in food production advanced beyond the hunter-gatherer stage, and then developed religion --as well as nasty germs and potent weapons of war --and adventured on sea and land to conquer and decimate preliterate cultures. A major advance in our understanding of human societies, Guns, Germs, and Steel chronicles the way that the modern world came to be and stunningly dismantles racially based theories of human

history. Winner of the Pulitzer Prize, the Phi Beta Kappa Award in Science, the Rhone-Poulenc Prize, and the Commonwealth club of California's Gold Medal.

*Diamond: Electronic Properties and Applications* John Wiley & Sons

Here, leading scientists report on why and how diamond can be optimized for applications in bioelectronic and electronics. They cover such topics as growth techniques, new and conventional doping mechanisms, superconductivity in diamond, and excitonic properties, while application aspects include quantum electronics at room temperature, biosensors as well as diamond nanocantilevers and SAWs. Written in a review style to make the topic accessible for a wider community of scientists working in interdisciplinary fields with backgrounds in physics, chemistry, biology and engineering, this is essential reading for everyone working in environments that involve conventional electronics, biotechnology, quantum computing, quantum cryptography, superconductivity and light emission from highly excited excitonic systems.

NEW YORK TIMES BESTSELLER • Learn the negotiation model used by Google to train employees worldwide, U.S. Special Ops to promote stability globally (“this stuff saves lives”), and families to forge better relationships. A 20% discount on an item already on sale. A four-year-old willingly brushes his/her teeth and goes to bed. A vacationing couple gets on a flight that has left the gate. \$5 million more for a small business; a billion dollars at a big one. Based on thirty years of research among forty thousand people in sixty countries, Wharton Business School Professor and Pulitzer Prize winner Stuart Diamond shows in this unique and revolutionary book how emotional intelligence, perceptions, cultural diversity and collaboration produce four times as much value as old-school, conflictive, power, leverage and logic. As negotiations underlie every human encounter, this immediately-usable advice works in virtually any situation: kids, jobs, travel, shopping, business, politics, relationships, cultures, partners, competitors. The tools are invisible until you first see them. Then they’re always there to solve your problems and meet your goals.

*Novel Aspects of Diamond* Houghton Mifflin Harcourt

#1 Essence bestselling author K’Wan returns with The Diamond Empire, the explosive, hard-hitting follow-up novel to the street love story Diamonds and Pearl. It’s about to be an all-out war. While an ambitious rival has taken over Diamonds’s crew, Diamonds lies in wait in exile, carefully planning his next move to comeback and reclaim his position as king of the streets of New York for good. But when an unexpected enemy from the past one-ups Diamonds and beats him at his own game, Diamonds needs to dig deep into his bag of tricks—and make an unlikely alliance—in order to climb back to the top. After opening her heart to Diamonds and then having him disappear, Pearl lives her days in a very dark place. But when her father’s empire is toppled and a gaping power vacuum needs to be filled, Pearl is drawn into the very life her father so desperately wanted to shield her from. Pearl needs to fight tooth and nail to become queen of her father’s kingdom, as Diamonds claws his way back to Pearl.

**Upheaval** Little, Brown

Describes a method of negotiation that isolates problems, focuses on interests, creates new options, and uses objective criteria to help two parties reach an agreement.

*Getting to Yes* W. W. Norton & Company

High-temperature and high-pressure treatment of diamond is becoming an important technology to elaborate diamonds. This is the first book providing a comprehensive review of the properties of HPHT-treated diamonds, based on the analysis of published data and the work of the authors. The book gives a detailed analysis of the physics of transformation of internal structures of diamonds subjected to HPHT treatment and discusses how these transformations can be detected using methods of optical microscopy and spectroscopy. It also gives practical recommendations for the recognition of HPHT-treated diamonds. The book is written in a language and terms which can be understood by a broad audience of physicists, mineralogists and gemologists.

Does the identification number 60 indicate a toxic substance or a flammable solid, in the molten state at an elevated temperature? Does the identification number 1035 indicate ethane or butane? What is the difference between natural gas transmission pipelines and natural gas distribution pipelines? If you came upon an overturned truck on the highway that was leaking, would you be able to identify if it was hazardous and know what steps to take? Questions like these and more are answered in the Emergency Response Guidebook. Learn how to identify symbols for and vehicles carrying toxic, flammable, explosive, radioactive, or otherwise harmful substances and how to respond once an incident involving those substances has been identified. Always be prepared in situations that are unfamiliar and dangerous and know how to rectify them. Keeping this guide around at all times will ensure that, if you were to come upon a transportation situation involving hazardous substances or dangerous goods, you will be able to help keep others and yourself out of danger. With color-coded pages for quick and easy reference, this is the official manual used by first responders in the United States and Canada for transportation incidents involving dangerous goods or hazardous materials.

Based on previously unexamined historical documents found in archives in Belgium, England, Israel, the Netherlands, and the United States, this book is the first in English to tell the story of the formation of one of the world's main strongholds of diamond production and trade in Palestine during the 1930s and 1940s. The history of the diamond-cutting industry, characterized by a long-standing Jewish presence, is discussed as a social history embedded in the international political economy of its times; the genesis of the industry in Palestine is placed on a broad continuum within the geographic and economic dislocations of Dutch, Belgian, and German diamond-cutting centers. In providing a micro-historical and interdisciplinary perspective, the story of the diamond industry in Mandate Palestine proposes a more nuanced picture of the uncritical approach to the strict boundaries of ethnic-based occupational communities.

The book gives an overview on the current development status of synthetic diamond films and their applications. Its initial part is devoted to discuss the different types of conductive diamond electrodes that have been synthesized, their preparation methods, and their chemical properties and characterization. The electrochemical properties of diamond films in different scientific areas, with special attention in electroanalysis, are further described. Different strategies to modify these electrodes are also discussed as important technologies with ability to change their electrochemical characteristics for a more specific electroanalytical use. The second part of the book deals with practical applications of diamond electrodes to the industry, organic electrosynthesis, electrochemical energy technology, and biotechnology. Special emphasis is made on the properties of these materials for the production of strong oxidizing species allowing the fast mineralization of organics and their use for water disinfection and decontamination. Recent biotechnological development on biosensors, microelectrodes, and nanostructured electrodes, as well as on neurochemistry, is also presented. The book will be written by a large number of internationally recognized experts and comprises 24 chapters describing the characteristics and theoretical fundamentals of the different electrochemical uses and applications of synthetic diamond films.

### HIDDEN DIAMOND

Farrar, Straus and Giroux (BYR)

From the author of *Guns, Germs and Steel*, Jared Diamond's *Collapse: How Societies Choose to Fail or Survive* is a visionary study of the mysterious downfall of past civilizations. Now in a revised edition with a new afterword, Jared Diamond's *Collapse* uncovers the secret behind why some societies flourish, while others founder - and what this means for our future. What happened to the people who made the forlorn long-abandoned statues of Easter Island? What happened to the architects of the crumbling Maya pyramids? Will we go the same way, our skyscrapers one day standing derelict and overgrown like the temples at Angkor Wat? Bringing together new evidence from a startling range of sources and piecing together the myriad influences, from climate to culture, that make societies self-destruct, Jared Diamond's *Collapse* also shows how - unlike our ancestors - we can benefit from our knowledge of the past and learn to be survivors. 'A grand sweep from a master storyteller of the human race' - Daily Mail 'Riveting, superb, terrifying' - Observer 'Gripping ... the book fulfils its huge ambition, and Diamond is the only man who could have written it' - Economist 'This book shines like all Diamond's work' - Sunday Times

A "riveting and illuminating" Bill Gates Summer Reading pick about how and why some nations recover from trauma and others don't (Yuval Noah Harari), by the Pulitzer Prize-winning author of the landmark bestseller *Guns, Germs, and Steel*. In his international bestsellers *Guns, Germs and Steel* and *Collapse*, Jared Diamond transformed our understanding of what makes civilizations rise and fall. Now, in his third book in this monumental trilogy, he reveals how successful nations recover from crises while adopting selective changes -- a coping mechanism more commonly associated with individuals recovering from personal crises. Diamond compares how six countries have survived recent upheavals -- ranging from the forced opening of Japan by U.S. Commodore Perry's fleet, to the Soviet Union's attack on Finland, to a murderous coup or countercoup in Chile and Indonesia, to the transformations of Germany and Austria after World War Two. Because Diamond has lived and spoken the language in five of these six countries, he can present gut-wrenching histories experienced firsthand. These nations coped, to varying degrees, through mechanisms such as acknowledgment of responsibility, painfully honest self-appraisal, and learning from models of other nations. Looking to the future, Diamond examines whether the United States, Japan, and the whole world are successfully coping with the grave crises they currently face. Can we learn from lessons of the past? Adding a psychological dimension to the in-depth history, geography, biology, and anthropology that mark all of Diamond's books, *Upheaval* reveals factors influencing how both whole nations and individual people can respond to big challenges. The result is a book epic in scope, but also his most personal yet.
