*Introduction to Psychology* McGraw-Hill Humanities, Social Sciences & World Languages  
Case Studies in Abnormal Psychology presents a broad range of cases drawn from the clinical experience of authors Kenneth N. Levy, Kristen M. Kelly, and William J. Ray to take readers beyond theory into real-life situations. The authors take a holistic approach by including multiple perspectives and considerations, apart from those of just the patient. Each chapter follows a consistent format: Presenting Problems and Client Description; Diagnosis and Case Formulation; Course of Treatment;

Outcome and Prognosis/Treatment Follow-up; and Discussion Questions. Providing empirically supported treatments and long-term follow-up in many case studies gives students a deeper understanding of each psychopathology and the effects of treatment over time.

Psychology gives students the opportunity to explore the latest theories and research in our ever-changing search for answers to the complex questions of psychopathology. The authors invite students to search for clues, follow-up on hunches, evaluate evidence, and participate in a process of discovery as they sift through the evidence on the origins of psychopathology and the effectiveness of specific interventions. In the new edition, Davison and Neale welcome new coauthor Ann Kring (University of California, Berkeley), who brings her interest and expertise in emotion and psychopathology, as well as an emphasis on gender, ethnicity, and culture. In addition, new pedagogy and a more open layout make the book more accessible to all students.

Abnormal Psychology Macmillan

The casebook provides 17 additional case histories based on the authors' clinical experiences, each going beyond DSM-IV diagnosis to describe the individual's history and symptoms, a theoretical discussion of treatment, a specific treatment plan, and the actual treatment conducted. The casebook also provides 3 cases without diagnosis or treatment, so students can identify disorders and suggest appropriate therapies.
