In Foundations of Microeconomics, Robin Bade and Michael Parkin provide a serious, yet accessible economics course that is focused on helping students understand the basic principles of economics, connecting these principles to today's economic issues, and developing a lasting interest in economics as a relevant part of their own lives. Foundations of Microeconomics features a tightly constructed pedagogical approach that never wavers from its goal to give students an in-depth understanding of important economic principles in a way that is clear, concise, and concerned every step of the way with engaging students' interest and understanding. This text is shorter than most and focused on key concepts but not watered down. The glue that holds together the chapters and the entire teaching/learning package is the "Checkpoint" feature. Bade and Parkin know that the best time to review material is when it's fresh in students' minds. "Checkpoints" reinforce the key points of the chapter by amplifying concepts with a full page of practice problems and solutions that immediately reinforce the learning objectives and strengthen students' understanding of the material. Foundations, the text's Web site, free with the purchase of any new copy of the book, includes a complete eText, integrated links to the eStudy Guide, Foundations Interactive, Economics in the News, and a full range of Web resources including self assessment quizzes with links back to the eText.

This second edition of Microeconomics is filled with learning-by-doing problems that give students a chance to make economics their own. These fully worked-out problems provide a step-by-step road map to help students solve numerical problems. Each problem correlates to similar practice problems at the end of each chapter. In addition, the authors include many extensive real-world examples in the text. These examples are contemporary applications of the theory and are longer and more extensive to show the evolution of the example. Each chapter opens with an example to draw readers into the topic.

"To change the way students see the world: this is my goal in teaching economics and in writing this book. Three facts about students are my guiding principles. First, they want to learn, but they are over-whelmed by the volume of claims on their time and energy. So, they must see the relevance to their lives and future careers of what they are being asked to learn. Second, students want to get it, and get it quickly. So, they must be presented with clear and succinct explanations. And third, students want to make sense of today's world and be better prepared for life after school. So, they must be shown how to apply the timeless principles of economics and its models to illuminate and provide a guide to understanding today's events and issues, and the future challenges they are likely to encounter. The organization of this text arises directly from these guiding principles"--
