****When not purchasing directly from the official sales agents of the WHO, especially at online bookshops, please note that there have been issues with counterfeited copies. Buy only from known sellers and if there are quality issues, please contact the seller for a refund.**** Thoracic Tumours is the fifth available volume in the fifth edition of the WHO series on the classification of human tumours. This series (also known as the WHO Blue Books) is regarded as the gold standard for the diagnosis of tumours and comprises a unique synthesis of histopathological diagnosis with digital and molecular pathology. These authoritative and concise reference books provide indispensable international standards for anyone involved in the care of patients with cancer or in cancer research, underpinning individual patient treatment as well as research into all aspects of cancer causation, prevention, therapy, and education. What's new in this edition? The fifth edition, guided by the WHO Classification of Tumours Editorial Board, establishes a single coherent cancer classification presented across a collection of individual volumes organized on the basis of anatomical site (digestive system, breast, soft tissue and bone, etc.) and structured in a systematic manner, with each tumour type listed within a taxonomic classification: site, category, family (class), type, and subtype. In each volume, the entities are now listed from benign to malignant and are described under an updated set of headings, including histopathology, diagnostic molecular pathology, staging, and easy-to-read essential and desirable diagnostic criteria. Who should read this book? * Pathologists * Oncologists * Respiratory physicians * Thoracic radiologists * Cancer researchers * Surgeons * Epidemiologists * Cancer registrars This volume: * Prepared by 217 authors and editors * Contributors from around the world * More than 1000 high-quality images * More than 3500 references

Pathology and Genetics of Tumours of the Breast and Female Genital Organs

John Wiley & Sons with contributions by Pathologists from 14 Countries Breast Tumours International Agency for Research on Cancer "The editors...have done an outstanding job of presenting...complex information in a lucid manner - this book is a must-read for the global community of aspiring students and neuro-oncology practitioners." Amar Gajjar, MD in the Foreword This is a succinct introduction to pediatric neuro-oncology. It summarizes the key advances in molecular biology that have helped transform this rapidly evolving field and provides up-to-date coverage of major and emerging treatment modalities as well as supportive care. Separate chapters present each kind of pediatric brain cancer and its diagnosis and treatment. As more children survive brain cancer, the importance of quality of life

issues and helping survivors to cope with the neuropsychological impact and long-term effects of current therapies has come into sharper focus; these topics are also addressed in the book, as are palliative care and pediatric neuro-oncology in countries with limited resources. The book is aimed at trainees and practitioners who seek an up-to-date text in pediatric neuro-oncology that is both comprehensive and concise.

PATHOLOGY AND GENETICS OF TUMOURS OF SOFT TISSUE AND BONE

WHO Classification of Tumours

The WHO Classification of Tumours of Endocrine Organs is the 10th volume in the 4th Edition of the WHO series on histological and genetic typing of human tumours. This authoritative, concise reference provides an international standard for oncologists and pathologists and will serve as an indispensable guide for use in the design of studies evaluating response to therapy and clinical outcome. Diagnostic criteria, pathological features, and associated genetic alterations are described in a disease-oriented manner. Sections on all recognized neoplasms and their variants include new ICD-O codes, epidemiology, clinical features, pathology, genetics, prognosis, and predictive factors. The book, prepared by 166 authors from 25 countries, contains more than 700 color images and tables and more than 3100 references.

TNM Classification of Malignant Tumours IARC WHO Classification of Tum

This new volume in the WHO series on histological and genetic typing of human tumors covers tumors of the kidney, the urinary system, the prostate, the testis and paratesticular tissue and the penis. Each entity is extensively discussed with information on clinicopathological, epidemiological, immunophenotypic and genetic aspects of these diseases. This book is an authoritative, concise reference, prepared by 131 authors from 22 countries. It contains more than 800 color photographs, numerous MRIs, ultrasound images, CT scans, charts and 3000 references. This book is in the series commonly referred to as the "Blue Book" series. Digestive System Tumours WHO Classification of Tumours of the Central Nervous System

WHO Classification of Tumours of the Central Nervous System International Agency for Research on Cancer Pediatric Neuro-oncology IARC

The WHO Classification of Tumours of the Eye is the 12th and final volume in the 4th edition of the WHO series on the classification of human tumors. The series (also known as the Blue Books) has long been regarded by pathologists as the gold standard for the diagnosis of tumors, and it is an indispensable guide for the design of evaluations, clinical trials, and studies involving cancer. These authoritative and concise reference books provide an international standard for anyone involved in cancer research or the care of cancer patients. Diagnostic criteria, pathological features, and genetic and other associated molecular alterations are described in a disease-oriented manner. This volume updates the existing ICD-O codes and provides new codes for use in epidemiology and cancer registration. It also provides information on clinical features, pathology, genetics, programs, and protective factors for each of the tumor types covered. The editors expect that this volume will be of particular interest to pathologists, oncologists, and ophthalmologists who manage or research tumors of the eye. Sections are included on all recognized neoplasms (and their variants) of the eye, lacrimal apparatus, and conjunctiva. There have been particularly substantial changes to the classification of conjunctival neoplasia and melanoma, based on the latest information from genetic and molecular studies. An e-book version of this title is also available. If you have already purchased the print product and wish to have the e-version as

well, IARC is offering special top-up pricing. Proof of purchase will be required for customers to avail themselves of this order.

WHO Classification of Tumours of Haematopoietic and Lymphoid Tissues World Health Organization
TNM Classification of Malignant Tumours, 7th Edition provides the latest, internationally agreed-upon standards to describe and categorize cancer stages and progression. Published in affiliation with the International Union Against Cancer (UICC), this authoritative guide contains important updated organ-specific classifications that oncologists and other professionals who manage patients with cancer need to accurately classify tumours for staging, prognosis and treatment. The major alterations addressed in the 7th Edition concern carcinomas of the oesophagus and the gastroesophageal junction, stomach, lung, appendix, biliary tract, skin, and prostate. In addition, there are several entirely new classifications: gastrointestinal carcinoids (neuroendocrine tumours) gastrointestinal stromal tumour upper aerodigestive mucosal melanoma Merkel cell carcinoma uterine sarcomas intrahepatic cholangiocarcinoma adrenal cortical carcinoma. A new approach has also been adopted to separate anatomical stage groupings from prognostic groupings in which other prognostic factors are added to T, N, and M categories. These new prognostic groupings, as well as the traditional anatomical groupings, are presented for oesophageal and prostate carcinomas. Visit www.wileyandiuicc.com for more information about the International Journal of Cancer and our other UICC book titles

WHO Classification of Tumours of the Central Nervous System International Agency for Research on Cancer

This second edition reflects the present stage of knowledge and advances in the histological typing of tumours of the central nervous system over the past 13 years since the first edition was published. The publication is intended to promote the adoption of a uniform terminology that will facilitate and improve communication among cancer workers.

International Classification of Diseases for Oncology WHO Classification of Tumours

"The WHO Classification of Tumours of the Digestive System presented in this book reflects the views of a Working Group that convened for an Editorial and Consensus Conference at the International Agency for Research on Cancer (IARC), Lyon, December 10-12, 2009"--P. [5].

WHO Classification of Tumours of the Breast Springer Science & Business Media

The WHO Classification of Head and Neck Tumours is the ninth volume in the 4th Edition of the WHO series on histological and genetic typing of human tumors. This authoritative, concise reference book provides an international standard for oncologists and pathologists and will serve as an indispensable guide for use in the design of studies evaluating response to therapy and clinical outcome. Diagnostic criteria, pathological features, and associated genetic alterations are described in a disease-oriented manner. Sections on all recognized neoplasms and their variants include new ICD-O codes, epidemiology, clinical features, macroscopy, pathology, genetics, and prognosis and predictive factors. The book, prepared by 135 authors from 35 countries, contains more than 600 color images and tables, and more than 2700 references. This book is in the series commonly referred to as the "Blue Book" series.

Central Nervous System Tumours: Who Classification of Tumours World Health Organization

WHO Classification of Tumours of the Urinary System and Male Genital Organs is the eighth volume in the 4th Edition of the WHO series on histological and genetic typing of human tumours. This authoritative, concise reference book provides an international standard for oncologists and pathologists and will serve as an indispensable guide for use in the design of studies monitoring response to therapy and clinical outcome. Diagnostic criteria, pathological features, and associated genetic alterations are described in a strictly disease-oriented manner. Sections on all recognized neoplasms and their variants include new ICD-O codes, epidemiology, clinical features, macroscopy, pathology, genetics, and prognosis and predictive factors. It contains numerous color photographs, MRIs, ultrasound images, CT scans, charts and references.

WHO Classification of Tumours of the Digestive System Springer Science & Business Media

"WHO Classification of Tumours of the Central Nervous System" is the first volume of the 4th Edition of the World Health Organization series on histological and genetic typing of human tumors. This authoritative, concise reference book provides an international standard for oncologists and pathologists and will serve as an indispensable guide for use in the design of studies monitoring response to therapy and clinical outcome. Diagnostic criteria pathological features and associated genetic alterations are described in a strictly disease-oriented manner. Sections on all recognized neoplasms and their variants include new ICD-O codes, incidence age and sex distribution, location, clinical signs and symptoms, pathology, genetics, and predictive factors. This book is in the series commonly referred to as the "Blue Book" series. The book prepared by 73 authors from 19 countries contains more than 400 color photographs, numerous X-rays,

computed tomography (CT), magnetic resonance (MR) images, charts and more than 2,500 references. ".The title of this book is typically modest. It is not only a classification of tumours of the central nervous system but an authoritative and explicit account of this group of tumours...This the fourth edition contains a number of distinct improvements on previous editions both in layout and content... One new feature is the clear account of the WHO's grading system its rationale and its application... New tumour entities are included...Newly recognized histological variants include pilomyxoid astrocytoma. Both anaplastic medulloblastoma and medulloblastoma with extensive nodularity have gained recognition in the classification... There are some differences in classification from the third edition most notably relating to anaplastic oligoastrocytoma. The change in emphasis follows cited differences in prognosis between mixed tumours with and without necrosis. Other changes are also apparent e.g. within the atypical teratoid/rhabdoid section mention of the INI-1 locus in the genetics section in the third edition has been expanded to include immunohistochemistry in the fourth edition. The fourth edition is unique in its clear-targeted and succinct style of presentation of tumors of the CNS... it will be of universal appeal in neuro-oncology and will most certainly form the main basis for diagnosis by multidisciplinary teams managing patients with tumors of the CNS." -- Nicki Cohen* and Roy O. Weller**

*Specialist Registrar in Neuropathology Southampton University Hospital NHS Trust UK. ** Emeritus Professor of Neuropathology Southampton University UK in" Neuropathology and Applied Neurobiology. ".Representing the first volume in the fourth edition series of the World Health Organization (WHO) Classification of Tumours this book provides a welcome mix of old and new. ... Perhaps the most noticeable improvement comes by way of a voluminous expansion in the genetics sections of the majority of tumor categories. This update parallels the recent explosion of research utilizing high-resolution genome screening and other molecular techniques. The authors have done an outstanding job in distilling the information housed in over 2,500 cited references into a reader friendly authoritative reference of CNS neoplasia. In summation, the current edition of the "WHO Classification of Tumours of the Central Nervous System" will serve as an indispensable textbook for all of those involved in the diagnosis and management of patients with tumors of the CNS and will make a valuable addition to libraries in pathology, radiology, oncology and neurosurgery departments. --"Journal of Neuropathology & Exp. WHO Classification of Tumours of the Breast World Health Organization

****When not purchasing directly from the official sales agents of the WHO, especially at online bookshops, please note that there have been issues with counterfeited copies. Buy only from known sellers and if there are quality issues, please contact the seller for a refund.**** Breast Tumours is the second volume in the 5th edition of the WHO series on the classification of human tumors. This series (also known as the WHO Blue Books) is regarded as the gold standard for the diagnosis of tumors and comprises a unique synthesis of histopathological diagnosis with digital and molecular pathology. These authoritative and concise reference books provide indispensable international standards for anyone involved in the care of patients with cancer or in cancer research, underpinning individual patient treatment as well as research into all aspects of cancer causation, prevention, therapy, and education. This book will be of special interest to pathologists, oncologists, surgeons and epidemiologists who manage or research breast tumors. Sections are included on all recognized neoplasms of the breast including the nipple and areola. Since the previous edition there have been changes based on recent molecular and genetic information, with impact on clinical

practice.

Thoracic Tumours World Health Organization

This is the third volume in the new World Health Organization series on histological and genetic typing of tumours. Tumours of the haematopoietic and lymphoid tissues are covered. This was a collaborative project of the European Association for Haematopathology and the Society for Haematopathology and others. The WHO classification is based on the principles defined in the Revised European-American Classification of Lymphoid Neoplasms (REAL) classification. Over 50 pathologists from around the world were involved in the project and proponents of all major lymphoma and leukaemia classifications have agreed to accept the WHO as the standard classification of haematological malignancies. So this classification represents the first true world wide consensus of haematologic malignancies. Colour photographs, magnetic resonance and ultrasound images and CT scans are included.

WHO Classification of Tumours of the Central Nervous System Springer

This second edition is more extensive and detailed than the previous one - now a reference of two decades standing. New technical methods have increased our understanding of many tumours, and the earlier group of monomorphic adenomas has been separated for easier identification, while clearly defined tumours - even if uncommon - have their own category. With reference to their differences in prognosis and treatment, the various types of carcinomas are now listed separately, and new entities have been adopted. The inclusion of the TNM classification of salivary gland tumours together with the more detailed description of the tumour-like lesions will contribute to an even better understanding.

WHO Classification of Tumours of the Urinary System and Male Genital Organs International Agency for Research on Cancer

WHO Classification of Tumours of Haematopoietic and Lymphoid Tissues the third volume in the new WHO series on histological and genetic typing of human tumors.
