Introduction to Managerial Accounting, 4/e by Brewer/Garrison/Noreen is based on the market-

leading text, Managerial Accounting, by Garrison, Noreen and Brewer. However, this is not simply a briefer book with chapters removed; B/G/N has been rethought and retooled to meet the needs of the market. B/G/N 4/e is a more accessible, yet thoroughly student-friendly text that satisfies the basic needs of the managerial accounting student without unnecessary depth on advanced topics associated with the follow-up course: cost accounting/cost

management. Faculty and students alike will find this new edition has retained the hallmark features of the Garrison brand: author-written supplements, excellent readability, terrific examples, and balanced end-of-chapter material. *Principles of Financial Accounting* Nobel Sciences A less-expensive grayscale paperback version is available. Accounting and Business Valuation Methods John Wiley & Sons

This book is intended to appeal to junior accountants and entrepreneurs who need guidance and practical analytical tools to enable them to develop business plans, raise capital and assess risk. Readers can initiate their own business plans by copying over 200

lines of formulae that create a 5 year plan that includes an earnings statement (or profit and loss account), balance sheet and cash flow statement. It will also appeal to students taking accounting and finance modules that cover basic accounting techniques, ratio analysis, investment appraisal, as well as company valuation and share valuation. The book demonstrates with four case studies where practice often differs with theory. Chapter 1 covers basic book-keeping,

showing how accounts are reconciled and controlled covering topics such as the working capital cycle and negotiating techniques. Chapter 2 deals with basic business planning and how to use ratio analysis (performance, asset management, structure, and investment ratios) to assess company performance. Chapter 3 explains that published accounts are based on a series of judgements and the effect the relatively new international financial reporting standards and

legislation such as the Sarbanes-Oxley Act is having on corporate governance. Chapter 4 covers risk assessment and valuing companies. Four case studies bring everything together; how investment trusts are valued, the effect of restructuring on share prices, the difference between serious profit warnings and mere compliance with regulation and hostile takeovers. Via a thorough analysis of published accounts this book will show readers how to:

distinguish between mandatory and optional reports; assess the strength of a company's balance sheet; assess the risk factors associated with investment; assess whether or not the market value of a particular company is justified. * examines the difference between mandatory and optional reports * explains how to assess the strength of a company's balance sheet * looks at how to assess whether or not the market value of a particular company is justified
