Over the years, a large body of knowledge has developed regarding the ways in which space flight affects the health of the personnel involved. Now, for the first time, this clinical knowledge on how to diagnose and treat conditions that either develop during a mission or because of a mission has been compiled by Drs. Michael Barratt and Sam L. Pool of the NASA/Johnson Space Center. Complete with detailed information on the physiological and psychological affects of space flight as well as how to diagnose and treat everything from dental concerns to decompression to dermatological problems encountered, this text is a must have for all those associated with aerospace medicine.

Principles of Clinical Medicine for Space Flight Harlequin Books

110 blank lined white pages, both sided wide ruled sheets. Beautiful matte cover 6" x 9" dimensions (little bit more than A5) Perfect size for your backpack at school, purse or tote bag on go, desk at work, at home. Can be used as a diary, log book, journal, notebook, or composition book for school and work. Greatly suited for brainstorming, organizing, lists, writing notes, journaling and writing. Main Facts About This Notebook: Size : 6" x 9" Pages : 110 pages Paper : Wide Ruled White Paper Cover : Black Matte Cover Suited as perfect presents for men, women, teens and kids for any gift giving occasion

Shadowlands is a photographic concept edition accentuating contours, silhouettes and dominant color compositions of 150 photographic images. Many of the images are recognizable icons and landmarks. They are transformed into graphic arts appearance by employing photo imaging software. The accompanying shadows create a foreboding and often sinister impression. The result is a glimpse into the unconscious white space that frames and lightens photography. Photographer Marques Vickers has assembled a diverse portfolio of internationally compiled images. Their reverse lighting reinvents the impression, often upsetting our conventional interpretation of their substance and matter. The effect mirrors the surrealists' notion of superficially unseen structures that open the portal for interpretative meanings. Imagery is enabled to transcend precise and simplistic definition.

One perfect red rose, a one-way ticket to Stockholm, and a cryptic "message" consisting of two Latin words intrigue art historian Vicky Bliss—as they were precisely intended to do. Beautiful, brilliant and, as always, dangerously inquisitive, Vicky recognizes the handiwork of her former lover, the daring jewel thief John Smythe. So she takes the bait, eagerly following Smythe's lead in the hope of finding a lost treasure. But the trail begins at a priceless fifth century chalice which will place Vicky at the mercy of a gang of ruthless criminals who have their eyes on an even more valuable prize. And the hunt threatens to turn deadly on a remote island, where a captive Vicky Bliss must lead an excavation into the distant past—and where digging too deep for the truth could dig her own grave.

Reluctant Dreamer [Ontario?] : Derouin

The research book is focused on the recent advances in computer vision methodologies and innovations in practice. The Contributions include: · Human Action Recognition: Contour-Based and Silhouette-based Approaches. · The Application of Machine Learning Techniques to Real Time Audience Analysis System. · Panorama Construction from Multi-view Cameras in Outdoor Scenes. · A New Real-Time Method of Contextual Image Description and Its Application in Robot Navigation and Intelligent Control. · Perception of Audio Visual Information for Mobile Robot Motion Control Systems. · Adaptive Surveillance Algorithms Based on the Situation Analysis. · Enhanced, Synthetic and Combined Vision Technologies for Civil Aviation. · Navigation of Autonomous Underwater Vehicles Using Acoustic and Visual Data Processing. · Efficient Denoising Algorithms for Intelligent Recognition Systems. · Image Segmentation Based on Two-dimensional Markov Chains. The book is directed to the PhD students, professors, researchers and software developers working in the areas of digital video processing and computer vision technologies.

In this personal, insider's look at his own work, Christian Siriano takes his fans through the creation of his favorite gowns, from sketch to dress. Photography of the Siriano at work in his Manhattan studio and narration by the designer himself track the design process, and give a behind-the-scenes look at the work of one of America's leading young fashion stars. Sketches, mood boards, and photographs of the designer at work in his Manhattan studio give a behind-the-scenes look of the materials and crafting of his lavish dresses, culminating in images of the finished gowns, presenting an intimate look at his work and process. Following the 2008 debut of his eponymous label at New York Fashion Week, Christian Siriano burst into international stardom, becoming a red-carpet favorite and one of today's most popular young fashion designers. Known for the sophisticated structure and exquisite movement of his gowns, Siriano has also gained fans for his vision of inclusiveness in fashion. For the first time, the beloved designer offers an intimate glimpse into his imaginative design process in *Dresses to Dream About*. Dubbed "the new king of old-school glamour" by Elle and "the next billion-dollar designer" by Yahoo! Style, his designs have appeared on the world's biggest stars and most prestigious red carpets. He counts entertainment's leading ladies as clients, from stars of film (Scarlett Johansson, Angelina Jolie, Viola Davis, Lupita Nyong'o, Gwyneth Paltrow, Hilary Swank, Kate Hudson, Sarah Jessica Parker, Shailene Woodley, Emily Blunt) to icons of music (Rihanna, Jennifer Lopez, Celine Dion, Lady Gaga, Taylor Swift, Nicki Minaj, Ariana Grande, Carrie Underwood) to stars of television (Kerry Washington, Tina Fey, Lea Michele, Jessica Lange, Julia Louis-Dreyfus, Emma Roberts, Christina Hendricks, Heidi Klum, Oprah Winfrey) and icons of fashion (Michelle Obama, Victoria Beckham, Alexa Chung, Dita Von Teese, Kate Upton, Ashley Graham, Coco Rocha), to name just a few. Christian Siriano also designs seasonal collections of affordable shoes and handbags for Payless ShoeSource, an ongoing guest designer collaboration since 2009. In 2016 he designed a collaboration collection for Lane Bryant. Other design partnerships have included a beauty line for Victoria's Secret, and clothing and/or accessories with HSN, Disney, Nordstrom, Best Buy, Puma, Starbucks, Spiegel, and others. "Silhouette," his first fragrance, launched in 2014. Christian Siriano intimates, eyewear, home/bedding, and beauty collections all launched in 2015 and 2016.

Cinderella Brides: These women are living out their very own fairy tales... but will they live happily ever after? "SCHEDULE A WEDDING... AND FIND ME A WIFE!" It had taken five years, but Jane Miller's dynamic, handsome and commanding boss had FINALLY proposed—even though she knew he'd never seen the shy, yearning glances she'd sent him. She was so happy she could cry—and did when she heard the rest of the plan! Because although this was a real wedding, it wouldn't be a real marriage. Trey Breckenridge III had business mergers in the making, and needed a wife to seal the

deal. But "Plain" Jane made an additional wedding vow—that before the honeymoon was over, Trey would realize just what he'd been missing all these years...

Through ten detailed case studies on groundbreaking brands like Vivienne Westwood, Vera Wang, Levi's®, and The Gap Inc., *Fashion Brand Stories* shows how fashion retailers and designers use storytelling to establish and maintain relationships with their customers. These entertaining case studies explore the evolution of each brand as a cultural entity with its own carefully crafted personality. Aided by interviews with industry professionals, you'll learn how brands start out, grow and encounter success or failure and how to apply those hard-won lessons to your own thoughts on branding. This beautifully illustrated third edition covers the changing role of social media, celebrity endorsements, quality over quantity, and more ethical sourcing, manufacturing, and consumption. Instructor's resources to accompany this edition are available at bloomsbury.pub/fashion-brand-stories-3e

Abstract: Algorithms for recognizing human actions in a video sequence are needed in applications

such as video surveillance and video search and retrieval. Developing algorithms that are not only accurate but also efficient is challenging due to the complexity of the task and the sheer size of video. In this thesis, we develop a general framework for compactly representing, quickly comparing, and accurately recognizing actions using empirical covariance matrices of features. With each pixel we associate a feature vector which provides a localized description of the action. This generates a spatio-temporally dense collection of action feature vectors. We use the empirical covariance matrix of this feature vector collection as a low-dimensional representation of the action. We use two supervised learning methods, the nearest-neighbor classification and sparse-linear approximation classification, for action recognition using labeled training dictionaries of action covariance matrices. Common to both methods is the novel idea that classification algorithms that have been developed for vectors can be re-purposed for covariance tensors by using a log-nonlinearity to map the convex cone of covariance matrices to the vector space of symmetric matrices. We illustrate the approach on two types of action feature vectors. One is based on silhouette tunnels of moving objects, and the other is based on optical flow. Action feature vectors of the first type describe the shape of the silhouette tunnel. Action feature vectors of the second type describe various motion characteristics such as velocity, gradient, and divergence. We demonstrate state-of-the-art recognition performance for both types of action feature vectors on the Weizmann, KTH, YouTube and the low-resolution ICPR-2010 challenge data sets under modest CPU requirements. We also demonstrate how our approach can be used for sequentially detecting changes in actions in an adaptive, unsupervised manner so as to parse a long video into sub-videos, each containing only a single action class. We use a non-parametric statistical framework to learn the distribution of the nearest-neighbor Riemannian distances between feature covariance matrices of video segments. Then, we use binary hypothesis testing to determine if new video segments include action changes. Our algorithm can detect 98.36% of action boundaries with 0.19% false alarm rate. We conclude by discussing how our framework can be adapted to recognize human interactions, which is usually a more challenging problem due to occlusion between moving individuals. We develop an approach based on dividing human interactions into separate sequences, each containing a single individual, and then combining the estimated action likelihoods for each individual sequence. The excellent performance of log-covariance-matrix representation combined with sparse-linear approximation classification demonstrated here for action recognition should encourage the use of this framework for other recognition problems.

Oops...We're Married? Silhouette

Once she'd dreamed of those words, but Eleanor Silks Rose had grown up and kicked her crush on Dillon Stone like a bad habit. So why had she blushed as the widowed single dad touched his lips to hers during the mock ceremony? And when their charity dating-game wedding turned out to be real, why did she start dreaming she'd be Mrs. Dillon Stone forever? Dillon was on a quest for the perfect wife, yet he'd never expected to be wed to an irresistible Eleanor! But he didn't need passion; he needed a mother for his son. Could his accidental bride be the woman he'd been searching for to bring love and sizzle to his life?
