MIT Press Expanded to twice as many entries as the 1985 edition, and updated with new publications, new editions of previous entries, titles missed the first time around, more of the artists' own writings, and monographs that deal with significant aspects or portions of an artist's work though not all of it. The listing is alphabetical by artist, and the index by author. The works cited include analytical

and critical, biographical, and enumerative; their formats range from books and catalogues raisonnées to exhibition and auction sale catalogues. A selection of biographical dictionaries containing information on artists is arranged by country. Annotation copyrighted by Book News, Inc., Portland, OR Encyclopedia of Twentieth Century Architecture libreriauniversitaria.it Edizioni This classic work (first published in Italian in 1948, translated in 1957, and revised in 1974) examines the history of architecture in light of its essence as space, animating and illuminating architectural creations so that their beauty—or indifference—is exposed. Along with commercial and dwelling units, temples, palaces, and cathedrals, Zevi treats structures such as fountains, columns, and monuments, subjecting them all to aesthetic, cultural, and functional criteria and explaining them in easily understood terms.

Beautifully illustrated with examples from the entire history of the art, this is one of the most stimulating and provocative books ever written on the history and purpose of architecture.

This collection discusses the innovative and experimental architecture of Israel during its first three decades following the nation's establishment in 1948. Written by leading researchers, the volume highlights new perspectives on the topic, discussing the inception, modernization and habitation of historic and lesser-researched areas alike in its interrogation. Inbal Ben-Asher Gitler and Anat Geva show how Israeli nation building, in its cultural, political and historical contexts, constituted an exceptional experiment in modern architecture. Examples include modern experiments in mass housing design; public architecture such as exhibition spaces, youth villages and synagogues; a necessary consideration of

climate in modern architectural experiments; and the exportation of Israeli modern architecture to other countries. *Saper vedere l'architettura* Cambridge Scholars Publishing

Everyone knows Notre Dame, the Eiffel Tower, and the chateaux of the Loire Valley, but French architects have also produced some of the most iconic buildings of the twentieth century, playing a central role in the emergence and development of modernism. In France, Jean-Louis Cohen presents a complete narrative of the unfolding architectural modernity in the country, grappling not only with the buildings but also with the political and critical context surrounding them. Cohen examines the developments in urban design and architecture within France, depicting the continuities and breaks in French architecture since 1900 against a broader international background. Describing the systems of architectural exchange with other countries—including Italy, Germany, Russia, and the United States—he offers a new view on the ideas, projects, and buildings otherwise so often considered only from narrow nationalistic perspectives. Cohen also maps the problematic search for a national identity against the background of European rivalries and France's colonial past. Drawing on a wealth of recent research, this authoritatively written book will challenge the way design professionals and historians view modern French architecture.

For more information including the introduction, a full list of entries and contributors, a generous selection of sample pages and more, visit the Encyclopedic of 20th Century Architecture website. Focusing on architecture from all regions of the world, this three-volume set profiles the twentieth century's vast chronicle of architectural achievements, both within and well beyond the theoretical confines of modernism. Unlike existing works, this encyclopedia examines the complexities of rapidly changing global conditions that have dispersed modern architectural types, movements, styles, and building practices across traditional geographic and cultural

boundaries.

While Mies van der Rohe's pavilion at the International Exposition in Barcelona in 1929 went unnoticed by most of the visitors to the fairgrounds, contemporary critics enthusiastically hailed it as the most convincing statement of the Modern Age. This book presents 100 selected texts about this much discussed building, written then and now: from the opening speech by the Spanish king, to newspaper articles and private letters, voices of contemporary architects, architecture critics and historians, and even a text by artist Ai Weiwei, who created an installation in the outdoor area of the pavilion in 2010. Thus the history of this building's reception depicts a dazzling picture and inconceivable breadth, including statements by such eminent authors as Frank Lloyd Wright, Leonardo Benevolo, Rem Koolhaas, Peter Eisenman.

Israel as a Modern Architectural Experimental Lab, 1948-1978

This study recovers Italo Calvino's central place in a lost history of interdisciplinary thought, politics, and literary philosophy in the 1960s. Drawing on his letters, essays, critical reviews, and fiction, as well as a wide range of works—primarily urban planning and design theory and history—circulating among his primary interlocutors, this book takes as its point of departure a sweeping reinterpretation of *Invisible Cities*. Passages from Calvino's most famous novel routinely appear as aphorisms in calendars, posters, and the popular literature of inspiration and self-help, reducing the novel to vague abstractions and totalizing wisdom about thinking outside the box. The shadow of

postmodern studies has had a similarly diminishing effect on this text, rendering up an accomplished but ultimately apolitical novelistic experimentation in endless deconstructive deferrals, the shiny surfaces of play, and the ultimately rigged game of self-referentiality. In contrast, this study draws on an archive of untranslated Italian- and French-language materials on urban planning, architecture, and utopian architecture to argue that Calvino's novel in fact introduces readers to the material history of urban renewal in Italy, France, and the U.S. in the 1960s, as well as the multidisciplinary core of cultural life in that decade: the complex and continuous interplay among novelists and architects, scientists and artists, literary historians and visual studies scholars. His last love poem for the dying city was in fact profoundly engaged, deeply committed to the ethical dimensions of both architecture and lived experience in the spaces of modernity as well as the resistant practices of reading and utopian imagining that his urban studies in turn inspired.

*Building Transatlantic Italy*

LetteraVentidue Edizioni

At the end of the Second World War, America's newly acquired status of hegemonic power—together with the launch of ambitious international programs such as the Marshall Plan—significantly altered existing transatlantic relations. In this context, Italian and American architectural cultures developed a fragile dialogue characterized by successful exchanges and forms of collaboration but also by reciprocal wariness. The dissemination of models and ideas concerning architecture generated complex effects and frequently led to surprising misinterpretations, obstinate forms of resistance and long negotiations between the involved parties. Issues of continuity and discontinuity dominated Italian culture and society at the time since at stake was the possible balance between allegedly long-established traditions and the prospect of a radical rupture with recent history. Architectural culture often contributed to reach a compromise between very diverging attitudes. Situated in the larger realm of studies on Americanization, this book questions current interpretations of transatlantic relations in architecture. By reconsidering the means and effects of the dialogue that unfolded between the two sides of the Atlantic during the postwar years, the volume analyzes how cultural and formal models were developed in one context and then modified when transferred to a new one as well as the fortune of this cultural exchange in terms

of circulation, amplification, and simplification.

Il volume riunisce due iniziative sul rapporto tra l'architetto ferrarese Biagio Rossetti, di cui nel 2016 ricorreva il cinquecentenario della morte, e lo storico dell'architettura Bruno Zevi, che nel 2018 avrebbe compiuto cento anni: una mostra, ospitata nella sede della Fondazione Bruno Zevi a Roma, e un convegno, svoltosi nel salone d'onore di Palazzo Tassoni a Ferrara, riuniti sotto il comune denominatore Biagio Rossetti secondo Bruno Zevi. Se la mostra aggiorna e rivisita quella eretica del 1956 - Identità di Biagio Rossetti, tenutasi nel Ridotto del Teatro Comunale di Ferrara - curata da Zevi e allestita da Valeriano Pastor, il convegno riflette sul rapporto tra lo storico e la sua città di elezione. Entrambe le iniziative ci guidano a «saper vedere Biagio Rossetti» e la sua Ferrara Nova che, grazie a quel filtro critico, sarebbe diventata la sorprendente metafora della città storica a misura di una diversa e altrimenti possibile contemporaneità.

### THE HISTORIOGRAPHY OF MODERN ARCHITECTURE

A&C Black

The volume reports on interdisciplinary discussions and interactions between theoretical research and practical studies on geometric structures and their applications in architecture, the arts, design, education, engineering, and mathematics. These related fields of research can enrich each other and renew their mutual interest in these topics through networks of shared inspiration, and can ultimately enhance the quality of geometry and graphics education. Particular attention is dedicated to the contributions that women have made to the scientific community and especially mathematics. The book introduces engineers, architects and designers interested in computer applications, graphics and geometry to the latest advances in the field, with a particular focus on science, the arts and mathematics education.

**From Within. Between Interior Architecture and Design** Routledge

What is the actual difference between architectural and interior design? To answer the question, this book looks into the actions of interior disciplines, to understand what they do, not only what they are. In doing so, it studies them through intersection, to identify the essential principles that characterise this kind of design. From typology to topology, from context to palimpsest, from space to

place, the result is a story - particularly focused on the Italian tradition - of the ideas and projects that defined a particular design sensibility that knows no limits of context or scale.

Learning a new discipline is similar to learning a new language; in order to master the foundation of architecture, you must first master the basic building blocks of its language - the definitions, function, and usage. *Language of Architecture* provides students and professional architects with the basic elements of architectural design, divided into twenty-six easy-to-comprehend chapters. This visual reference includes an introductory, historical view of the elements, as well as an overview of how these elements can and have been used across multiple design disciplines. Whether you're new to the field or have been an architect for years, you'll want to flip through the pages of this book throughout your career and use it as the go-to reference for inspiration, ideas, and reminders of how a strong knowledge of the basics allows for meaningful, memorable, and beautiful fashions that extend beyond trends. This comprehensive learning tool is the one book you'll want as a staple in your library.

### TIME FRAMES

When *The Earth, the Temple, and the Gods* first appeared in 1962, it was hailed by the critics for its erudition, historical imagination and boldness. Subsequently, this comprehensive study of Greek temples and site-planning has been widely accepted as a landmark of architectural history, for it offers an inspired and arresting insight into nature and function of Greek sacred architecture. Vincent Scully, one of America's most brilliant and articulate scholars, understands the temples as physical embodiment of the gods in landscapes that had for the Greeks divine attributes and sacred connotations. He explores the meanings inherent in the calculated interaction between man-made sculptural forces and the natural landscape, and he relates this interaction to our understanding of Greek culture from the pre-Greek Aegean to the Hellenistic period. Years of research and travel were devoted to *The Earth, the Temple, and the Gods*. Scores of sites were restudied on the spot, including many lesser-known sanctuaries throughout the Hellenic world. The study includes reconstruction drawings, plans, and maps along with its richly illustrated, detailed discussions of

major sites.

BRILL  
This book addresses the critical terminologies of place and space (and their role within medieval studies) in a considered and critical manner, presenting a scholarly introduction written by the editors alongside thematic case studies that address a wide range of visual and textual material. The chapters consider the extant visual and textual sources from the medieval period alongside contemporary scholarly discussions to examine place and space in their wider critical context, and are written by specialists in a range of disciplines including art history, archaeology, history, and literature.

### ARCHITECTURE ON THE WEB. A CRITICAL APPROACH TO COMMUNICATION

Ashgate Publishing, Ltd.

This volume explores the relationship between sites, architectural symbols and cultural landscapes, and discusses a variety of issues related to the central themes of the book, providing insights into the history, as well as the present development, of cultural landscapes. Contributors to this book—architects, architectural historians and theorists—reconsider the notion of *genius loci* and its importance in shaping historical landscapes in the eastern part of Europe. Despite being focused on Lithuanian historical and architectural contexts, these essays will be of interest to anyone who approaches architectural and urban legacies as part of general culture. Transcending local realities, and providing insights into the making and destruction of cultural landscapes, the book will be useful to architects and architectural historians, as well as scholars dealing with urban and landscape issues not only in Europe, but also in other parts of the globe.

Bruno Zevi (1918-2000) è un punto di riferimento e di confronto per chiunque si occupi di architettura. Storico innovatore, critico raffinato, colto divulgatore, polemista acuto, Zevi ha riportato l'architettura e la sua storia al centro del dibattito culturale. Basata su un'indagine documentaria minuziosa, questa Introduzione è il primo studio sistematico che ne ricostruisce la biografia intellettuale, la presenza e il ruolo sulla scena nazionale e internazionale.  
*Architectural Dialogues with Postwar America* Routledge

Whatever 'ugliness' is, it remains a problematic category in architectural aesthetics – alternately vilified and appropriated, used either to shock or to invert conventions of architecture. This book presents sixteen new scholarly essays which rethink ugliness in recent architecture – from Brutalism to eclectic postmodern architectural productions – and together offer a diverse reappraisal of the history and theory of postmodern architecture and design. The essays address both broad theoretical questions on ugliness and postmodern aesthetics, as well as more specific analyses of significant architectural examples dating from the last decades of the twentieth century. The book attends to the diverse relations between the aesthetic register of ugliness and closely connected aesthetic concepts such as the monstrous, the ordinary, disgust, the excessive, the

grotesque, the interesting, the impure and the sublime. This volume does not simply document the history of a postmodern anti-aesthetic through case studies. Instead, it aims to shed light on aesthetic problems that have been largely overlooked in the agenda of architectural theory. This book answers in detail the questions: How did postmodern architects appropriate troublesome contradictions bound to the raw ugliness of the real? How have the ugly and the antiaesthetic been a productive force in postmodern architecture? How can ugliness be of value to architecture? And how can architecture make good use of ugliness?
