Foundations Baen Publishing Enterprises Presents extended reviews of noteworthy books, short reviews, essays and articles on topics and trends in publishing, literature, culture and the arts. Includes lists of best sellers (hardcover and paperback).

Superheavy PBS

This book focuses on probability and the Bayesian viewpoint. It presents basic material on probability and then introduces inference by means of Bayes' rule. The emphasis is on statistical thinking and how one learns from data. The objective is to present the basic tenets of statistical inference. Unique in its format, the text allows students to discover statistical concepts, explore statistical principles, and apply statistical techniques. In addition to the numerous activities and exercises around which the text is built, the book includes a basic text exposition for each topic, and data appendices.

Pink warships that

vanish at dusk, urinary maladies of an emperor, and a gold test for cocaine - behold the chemistry of metal ions as never before. In this book you will learn about the sarcophagus molecule, the Chen-Kao test, and how murderers can be caught blue-handed with the wonders of glowing luminol. You will also meet the hidden chemistry of metal ions in everyday life, from the clever modern devices that measure blood-sugar levels, to the leather on your shoes and chewing gum stuck to their soles. Expect to encounter a fair share of heroes and villains, real and fictional, scientist and layperson. Such characters include an ex-MI5 employee running a hospital ward

in London amid falling German V1 rockets, a notorious racing cyclist, a proud butler and the lady who first proposed nuclear fission (it's not who you think it is). With engaging, humorous and intelligent prose, the reader will discover the fascinating back-stories of chemical discoveries and inventions where metal ions have played a major role. Featuring a foreword by popular science communicator Dr Raychelle Burks of St. Edward's University, Texas.

The Black Cloud Taylor & Francis

Through a mishap in Professor Bulfinch's laboratory, Danny accidentally creates an anti-gravity paint. The natural use, of course, is for a spaceship -- the paint can replace

rockets to get the ship into space.

Unfortunately, the spaceship is launched prematurely after Danny and Joe follow Professor Bulfinch and Dr. Grimes on a tour of the ship. A mechanical failure dooms the four to a one-way trip out of the Solar System -- unless they can repair the spaceship in time!

This is the first of the 15-volume Danny Dunn series and features the original cover by acclaimed artist Ezra Jack Keats. Look for "Danny Dunn on a Desert Island," the second volume of the series, coming soon from Wildside Press! *A Life in the Cinema* Springer Science & Business Media

In the year 2270, with travel to the nearby planets well established, a bizarre

discovery is made on Callisto, the eighth moon of Jupiter. Dozens upon dozens of strange wheeled artifacts-wheelers-are found buried beneath the icy surface. No one knows what they were used for and who left them in our solar system. At the same time, it is discovered that the moons of Jupiter have moved from their age-old positions. A quickly formed expedition finds that Jupiter is inhabited by a race of balloon-like aliens, who defend their world against comet strikes by moving their moons using gravitational technology. This time, though, their redirection is aiming an incoming comet directly at Earth! Communication at first proves impossible, but

an Earth child who has an intuitive understanding of animal behavior becomes the key to contacting them-and joining forces with them to save the world.

HIDDEN VARIABLES

Royal Society of Chemistry Game Design Foundations, Second Edition covers how to design the game from the important opening sentence, the "One Pager" document, the Executive Summary and Game Proposal, the Character Document to the Game Design Document. The book describes game genres, where game ideas come from, game research, innovation in gaming, important gaming principles such as game mechanics,

game balancing, AI, path finding and game tiers. The basics of programming, level designing, and film scriptwriting are explained by example. Each chapter has exercises to hone in on the newly learned designer skills that will display your work as a game designer and your knowledge in the game industry.

A special commemoration of this long_running themed science fiction anthology edited by multiple #1 best seller, Larry Niven. Here is the 25th anniversary edition of the original volume that started it all. Includes an all_new introduction by Larry Niven for this re_issue of the first volume in a series that now numbers fourteen volumes and is still going strong. Larry Niven's bestselling Man_Kzin series begins! The kzin,

formerly invincible conquerors of all they encountered, had a hard time dealing with their ignominious defeat by the leaf_eating humans. Some secretly hatched schemes for a rematch, others concentrated on gathering power within the kzin hierarchy, and some shamefully cooperated with the contemptible humans, though often for hidden motives. In war and in uneasy peace, here is the first masterful volume in the Man_Kzin Wars shared universe anthology created by multiple New York Times best_seller, incomparable tale_spinner, and Nebula_ and five_time Hugo_Award_winner, Larry Niven. At the publisher's request, this title is sold without

DRM (Digital Rights Management).

Microservices and big-data increasingly confront us with the limitations of traditional input/output. In traditional IO, work that is IO-bound dominates threads. This wouldn't be such a big deal if we could add more threads cheaply, but threads are expensive on the JVM, and most other platforms. Even if threads were cheap and infinitely scalable, we'd still be confronted with the faulty nature of networks. Things break, and they often do so in subtle, but non-exceptional ways. Traditional approaches to integration bury the faulty nature of

networks behind overly simplifying abstractions. We need something better. Join Spring Developer Advocate Josh Long for an introduction to reactive programming in the Spring ecosystem, leveraging the reactive streams specification, Reactor, Spring Boot, Spring Cloud and so much more. This book will cover important concepts in reactive programming including project Reactor and the reactive streams specification, data access, web programming, RPC with protocols like RSocket, testing, and integration and composition, and more.

Food Marketing to Children and Adolescents Jones & Bartlett Publishers
Shortlisted for the

2020 AAAS/Subaru SB&F Prize for Excellence in Science Books Creating an element is no easy feat. It's the equivalent of firing six trillion bullets a second at a needle in a haystack, hoping the bullet and needle somehow fuse together, then catching it in less than a thousandth of a second - after which it's gone forever. Welcome to the world of the superheavy elements: a realm where scientists use giant machines and spend years trying to make a single atom of mysterious artefacts that have never existed on Earth. From the first elements past uranium and their role in the atomic bomb to the latest discoveries stretching our chemical world, Superheavy will

reveal the hidden stories lurking at the edges of the periodic table. Why did the US Air Force fly planes into mushroom clouds? Who won the transfermium wars? How did an earthquake help give Japan its first element? And what happened when Superman almost spilled nuclear secrets? In a globe-trotting adventure that stretches from the United States to Russia, Sweden to Australia, Superheavy is your guide to the amazing science filling in the missing pieces of the periodic table. By the end you'll not only marvel at how nuclear science has changed our lives - you'll wonder where it's going to take us in the future.

Brightness Reef

McGraw-Hill Companies
Introduction by Stephen

King, Afterword by

Tobe Hooper, Jacket

and Interior Art by

Clive Barker

A LIFE IN THE CINEMA is the first

book from award-

winning filmmaker

Mick Garris. It is a

collection of eight

prickly tales and a

screenplay that reach

under the skin of real

life and reel life to take

you places you never

realized you wanted to

go. The title story, "A

Life in the Cinema" and

its sequel, "Starfucker",

are set in the author's

hometown of

Hollywood, and provide

a yellow-jaundiced look at a world you only thought was glamorous. As Stephen King, in his introduction, says: "Here is a real Hollywood insider writing about the real inside world of filmmaking: the good, the bad, and the cheesy. These stories are both erotic and cynical, but they are above all well and fiercely told--when he's yarning about the tarnished tinsel underbelly of the town he knows (and clearly loves) the best, Mick Garris writes like a combination of Robert Bloch and James Ellroy, hardboiled noir with a ghastly little prink of the devil's own pitchfork." "Not all of the stories are Hollywood-based: Garris includes tales of a grandmother

who is just as loving in death as she was in life, a geriatric trailer park with a randy secret, wistful and impossible love with a twist, the wrong kind of baby-love, and a deathly brush with fame. The book is capped with a screenplay by Garris, as well as "Chocolate", the story it's based on, providing, as King puts it, "a textbook seminar in the art and craft of adapting one's own work." "So welcome to a dark side of Hollywood you've never seen before..."

Quinlan's Film Directors
Bloomsbury Publishing

"One of the most imaginative, exciting talents to appear on the sf scene in recent years."--Publisher's Weekly
Charles A. Sheffield was an

English-born mathematician, physicist and science fiction author, whose words are collected here in one of his most iconic short story collections ever published, *Hidden Variables*. Known for his ability to incorporate real science into his fiction, Sheffield's stories exposed the potential flaws and triumphs of the human mind, by showing us that even if we've evolved enough to gain mastery of technology and advanced science, we can still fall prey to our selfish and emotional natures--but on a scale that can affect the rest of humanity. In "The Man who Stole the Moon" Sheffield tells of the depths one man will descend to overcome the

bureaucratic stifling of initiative that happens when those in power aren't willing to grant someone's visions for the future. Will simple red tape prevent Man from leaving Earth to make the greatest leap for all of humanity? In "Forefather Figure," can the wish for us to know more about the Cro-Magnon's, our ancestors of an era long gone, justify creating the technology to help a man cheat death, only for the scientist to then use that life to achieve his own ends? And in "Hidden Variables," the story this collection was named after, can the mere potential for one man's greatest scientific achievement to have wide-ranging adverse consequences mean his murder is something that can be

sanctioned? Whether it's a short story on one man's atonement after a murder in "From Natural Causes," or the discovery of a child prodigy on a generational asteroid ship, bound for a new colony in "All the Colors of the Vacuum," or the breathtaking tale of loss and redemption in "Summertime", the variations in the stories Sheffield wrote can be quite profound, but his talent was by no means hidden.

The accessible, beneficial guide to developing algorithmic trading solutions The Ultimate Algorithmic Trading System Toolbox is the complete package savvy investors have

been looking for. An integration of explanation and tutorial, this guide takes you from utter novice to out-the-door trading solution as you learn the tools and techniques of the trade. You'll explore the broad spectrum of today's technological offerings, and use several to develop trading ideas using the provided source code and the author's own library, and get practical advice on popular software packages including TradeStation, TradersStudio, MultiCharts, Excel, and more. You'll stop making repetitive mistakes as you learn to recognize which paths you should not go down, and you'll discover that you don't need to be a

programmer to take advantage of the latest technology. The companion website provides up-to-date TradeStation code, Excel spreadsheets, and instructional video, and gives you access to the author himself to help you interpret and implement the included algorithms. Algorithmic system trading isn't really all that new, but the technology that lets you program, evaluate, and implement trading ideas is rapidly evolving. This book helps you take advantage of these new capabilities to develop the trading solution you've been looking for. Exploit trading technology without a computer science degree Evaluate different trading systems'

strengths and weaknesses Stop making the same trading mistakes over and over again Develop a complete trading solution using provided source code and libraries New technology has enabled the average trader to easily implement their ideas at very low cost, breathing new life into systems that were once not viable. If you're ready to take advantage of the new trading environment but don't know where to start, The Ultimate Algorithmic Trading System Toolbox will help you get on board quickly and easily. **Marvel 1872** MoneyBall Medicine Strange visitors throw a planet of refugees into chaos in this science fiction

adventure by the author of New York Times bestseller *The Uplift War*. Book One in the Uplift Storm Trilogy Centuries ago, the Buyur race abandoned Jijo. Now off-limits to settlers, it's warded by guardian machines who will protect the planet until the Institutes of the Five Galaxies declare Jijo ready—in another million years—for new civilization. But mere laws and guardians can't keep out the desperate. Clandestine bands of "sooners" have sneaked down to the lonely planet. Six intelligent races—all refugees—have bickered . . . then built a new society in the wilds of Jijo, hidden beneath forest canopies. Together they live in harmony—and in fear

of the day their illegal colony will be discovered and judgment from the Five Galaxies will rain down upon them. One day a strange starship finally does appear on Jijo. But its owners do not bring law or judgment. Only dire secrets. And they'll do whatever it takes to keep them . . . This ebook features a new introduction by the author. Hugo Award Finalist "A captivating read . . . Brightness Reef leaves you looking forward to more. It's a worthy addition to what promises to be a great science fiction series." —Star Tribune "Brin is a skillful storyteller. . . . There is more than enough action to keep the book exciting, and like all good serials, the first volume ends with a bang." —The Plain

Dealer “A universe that’s immensely appealing, leaving readers hungry for more of this exciting, epic adventure.”
—Publishers Weekly
“Tremendously

inventive, ambitious work.” —Kirkus
Reviews “A timely, science fictional contemplation of the refugee experience.”—Santa Fe Reporter
