POLICIES, PRAXIS AND IMPACT

Springer

This book presents a global view of digital and knowledge-based economies and analyses the role of intellectual capital, intellectual capital reports and information technology in achieving sustained competitive advantages in the globalized economy. Intellectual Capital in the Digital Economy reviews the state of the art in the field of intellectual capital and intellectual capital reports, exploring core concepts, strengths and weaknesses, gaps, latest developments, the main components of intellectual capital, the main sections of the reports, and indicators of each component. It presents experiences from pioneering companies and institutions in measuring intellectual capital around the world. It incorporates an interdisciplinary and cross-sectorial approach, offering a comparative view of intellectual capital reports elaborated in different regions of the world. This book presents case studies and experiences on the building of intellectual capital reports in organizations. In addition, the book discusses the benefits and challenges of

building intellectual capital reports in smart economies and societies. This book is of direct interest to researchers, students and policymakers examining intellectual capital and the knowledge-based economy.

THE STORY OF BAD RELIGION

Routledge

The rousing story of the last gasp of human agency and how today's best and brightest minds are endeavoring to put an end to it. It used to be that to diagnose an illness, interpret legal documents, analyze foreign policy, or write a newspaper article you needed a human being with specific skills—and maybe an advanced degree or two. These days, high-level tasks are increasingly being handled by algorithms that can do precise work not only with speed but also with nuance. These “bots” started with human programming and logic, but now their reach extends beyond what their creators ever expected. In this fascinating, frightening book, Christopher Steiner tells the story of how algorithms took over—and shows why the “bot revolution” is about to spill into every aspect of our lives, often silently, without our knowledge. The May 2010 “Flash Crash” exposed Wall Street's reliance on trading bots to the tune of a 998-point market drop and \$1 trillion in vanished market value. But that was just the beginning. In Automate This, we meet bots that are

driving cars, penning haiku, and writing music mistaken for Bach's. They listen in on our customer service calls and figure out what Iran would do in the event of a nuclear standoff. There are algorithms that can pick out the most cohesive crew of astronauts for a space mission or identify the next Jeremy Lin. Some can even ingest statistics from baseball games and spit out pitch-perfect sports journalism indistinguishable from that produced by humans. The interaction of man and machine can make our lives easier. But what will the world look like when algorithms control our hospitals, our roads, our culture, and our national security? What happens to businesses when we automate judgment and eliminate human instinct? And what role will be left for doctors, lawyers, writers, truck drivers, and many others? Who knows—maybe there's a bot learning to do your job this minute.

Regulatory Reforms in Italy: A Case Study in Europeanisation
A Case Study in Europeanisation

After strong growth in 2017 and early 2018, global economic activity slowed notably in the second half of last year, reflecting a confluence of factors affecting major economies. China's growth declined following a combination of needed regulatory tightening to rein in shadow banking and an increase in trade tensions with the United States. The euro area economy lost more momentum than expected as consumer and business confidence weakened and car production in Germany was disrupted by the introduction of new emission standards; investment dropped in Italy as sovereign spreads widened; and external demand, especially

from emerging Asia, softened. Elsewhere, natural disasters hurt activity in Japan. Trade tensions increasingly took a toll on business confidence and, so, financial market sentiment worsened, with financial conditions tightening for vulnerable emerging markets in the spring of 2018 and then in advanced economies later in the year, weighing on global demand. Conditions have eased in 2019 as the US Federal Reserve signaled a more accommodative monetary policy stance and markets became more optimistic about a US-China trade deal, but they remain slightly more restrictive than in the fall.

Since the very beginning of critical care medicine, much attention has been paid to the risk of bleeding, but only recently the risk of thrombosis has been recognized in critical patients; in fact, current laboratory investigations aimed to monitor blood coagulation are more focused on the assessment of the hemorrhagic than of the thrombotic risk. Since mid-90s, many studies have detected powerful pro-thrombotic actions of endogenous mediators in sepsis and other inflammatory conditions, including trauma and postoperative status. Unfortunately, the related complications are both hard to detect and extremely harmful. The volume provides a full coverage of the hemocoagulative problems in anesthesia and intensive care, taking into consideration the physiology and monitoring of hemostasis, its relation with sepsis, and the specific aspects of the various critical conditions - from trauma to burns, to heart and transplant surgery or acute renal failure.

An absolute must-read for anyone who loves books In Closing Time, Joe Queenan shared how he became a voracious reader to escape a joyless childhood. Now, like many bibliophiles, he fears for the books that once saved him. In One for the Books, Queenan examines the entire culture of reading and what books really mean in people's lives today. What does it suggest if a person has no books displayed in his living room? Can an obsession with reading prove detrimental to one's well being? How useful are covers in selling books? Queenan's many fans—as well as anyone who loves books and reading—will want to join him on his unforgettably funny and moving journey.

New drugs, new devices, improved surgical techniques, and innovative diagnostic procedures and equipment emerge rapidly. But development of these technologies has outpaced evaluation of their safety, efficacy, cost-effectiveness, and ethical and social consequences. This volume, which is "strongly recommended" by The New England Journal of Medicine "to all those interested in the future of the practice of medicine," examines how new discoveries can be translated into better care, and how the current system's inefficiencies prevent effective health care delivery. In addition, the book offers detailed profiles of 20 organizations currently involved in medical technology assessment, and proposes ways to organize U.S. efforts and create a coordinated national system for evaluating new medical treatments and technology.

Economic growth and the creation of wealth have cut global poverty rates, yet vulnerability, inequality, exclusion and violence have escalated within and across societies throughout the world. Unsustainable patterns of economic production and consumption promote global warming, environmental degradation and an upsurge in natural disasters. Moreover, while we have strengthened international human rights frameworks over the past several decades, implementing and protecting these norms remains a challenge. These changes signal the emergence of a new global context for learning that has vital implications for education. Rethinking the purpose of education and the organization of learning has never been more urgent. This book is inspired by a humanistic vision of education and development, based on respect for life and human dignity, equal rights, social justice, cultural diversity, international solidarity and shared responsibility for a sustainable future.

Hachette Books

Role Motivation Theories is concerned with four types of organisations and what makes them work. The four are not exhaustive of all possible organisational types but they do represent the major forms found in the world today. If we wish to understand organisational functioning in modern society then we need to have substantial insight into these four types of organisations. Drawing upon many years of research, John B. Miner argues that the organisational effectiveness required to produce high levels of productivity results from achieving a state of integration between the type of organizational system and the

kind of people who fill the key positions in the system. Role Motivation Theores is the most comprehensive and up-to-date treatment of this work available.

BIG DATA FOR GROWTH AND WELL-BEING

Routledge

This book explores how the Internet impacts on the protection of fundamental rights, particularly with regard to freedom of speech and privacy. In doing so, it seeks to bridge the gap between Internet Law and European and Constitutional Law. The book aims to emancipate the debate on internet law and jurisprudence from the dominant position, with specific reference to European legal regimes. This approach aims to inject a European and constitutional “soul” into the topic. Moreover, the book addresses the relationship between new technologies and the protection of fundamental rights within the theoretical debate surrounding the process of European integration, with particular emphasis on judicial dialogue. This innovative book provides a thorough analysis of the forms, models and styles of judicial protection of

fundamental rights in the digital era and compares the European vision to that of the United States. The book offers the first comparative analysis in which the notion of (judicial) frame, borrowed from linguistic and cognitive studies, is systematically applied to the theories of interpretation and argumentation. With a Foreword by Robert Spano, President of the European Court of Human Rights.

METHODS TIME MEASUREMENT

This book provides a unique study of the role of universities, as organisation systems, in the pursuit of the Europe 2020 strategy. While Europe 2020 focuses on creating the basis for the advancement and cohesion of the EU’s member states, it also has an important role in influencing the development strategies for potential candidate states. In this regard, the book examines two new member states – Slovenia and Croatia – and two potential EU candidate states – Serbia and Kosovo – in the Western Balkans. Based on these cases, the author argues that the operationalization of the Europe 2020 strategy depends to a great extent of the role and contribution of tertiary organisations such as educational institutions, i.e. public and private universities, and therefore requires the formulation of an economic development strategy at the national level that is capable of duly allocating the available financial resources. The study suggests that the paradigm shift represented by Europe 2020 has helped to forge a new academic identity, adding to the relevance of university organisations as fundamental agents for the promotion of economic development; in addition, it shows

that an intensive learning process involving major structural changes is underway in the four countries discussed, as well as many other EU member states.

Growth Slowdown, Precarious Recovery Penguin

This title was first published in 2001. The question this thesis attempts to answer is summarized as follows: what accounts for the amazing stability of Italian transport policy in the face of European challenges, given the fact that - as most national and European policy-makers readily believe - it is not capable of addressing the problem of the sector? This study analyzes the transport policy in Italy from the 1990s into the 21st century. It looks at how the two sub-sectors of surface transport, road haulage and railways, have been managed by the public and private actors involved. In both sectors the policy appears to have failed, either by not offering a remedy to problems or by aggravating them further. The author believes that studying

transport policy in Italy will shed light on the wider question of how national policy-making patterns are influenced by developments in the international environment; in this case looking closely at the influence of the European Union.

This book presents a collection of original research papers addressing the relationship between information systems (IS) and innovation. “Open”, “Smart” and “Network” are three keywords that are currently guiding information systems (IS) innovation, enhancing IS potentialities and their ability to support decision-making processes. The book discusses the relevance of these three new concepts in connection with technological and organizational innovations (i.e. cloud, smart technologies and networking), and the role they play in the development of accounting and management information systems. The book’s primary aim is to investigate how these innovations could influence information systems (with a particular focus on accounting and management information systems) by enhancing their information potentialities and improving accounting methodologies, performance measurement systems, data management, information systems architectures, and external and internal reporting. The book is based on a selection of the best papers—original double-blind reviewed contributions—presented at the 2016 Annual Conference of the

Italian Chapter of the Association for Information Systems (AIS).

A NEW HEALTH SYSTEM FOR THE 21ST CENTURY

Penguin

Second in a series of publications from the Institute of Medicine's Quality of Health Care in America project Today's health care providers have more research findings and more technology available to them than ever before. Yet recent reports have raised serious doubts about the quality of health care in America. Crossing the Quality Chasm makes an urgent call for fundamental change to close the quality gap. This book recommends a sweeping redesign of the American health care system and provides overarching principles for specific direction for policymakers, health care leaders, clinicians, regulators, purchasers, and others. In this comprehensive volume the committee offers: A set of performance expectations for the 21st century health care system. A set of 10 new rules to guide patient-clinician relationships. A suggested organizing framework to better align the incentives inherent in payment and accountability with improvements in quality. Key steps to promote evidence-based practice and strengthen clinical information systems. Analyzing health care organizations as complex systems, Crossing the Quality Chasm also documents the causes of the quality gap, identifies current practices that

impede quality care, and explores how systems approaches can be used to implement change.
