 You see things, and sa)' why? But I dream things that never were, and I say, 11'hy 110t? George Bernhard Shaw Far ahead of his time, June 1st, 1909, Alexander Maximov communicate d in a lecture, given in the Charite in Berlin, the fundamental knowledge, that there exists a lymphoid

hemopoetic stem cell. Alexander Friedenstein explained that during the following years, Maximov also showed that the idea of interaction between hemopoetic cells and their stroma to be one of the most significant experiences. Monoclonal antibodies, recombinant DNA technics and the improvement of tissue culture models are the major developments to improve our

possibilities to clarify growth and differentiation functions of hemopoetic cells. During the last two decades it was shown that soluble products, released from T cells, were not only involved in inducing B cells to produce specific immunoglobul in secretion after antigen stimulation. Furthermore, lymphokines together with other cytokines regulate the growth and differentiation

of hemopoetic cells. As I have learned from Dick Gershon, our knowledge of the cellular basis for immunoregulation has come a long way since 450 B.C. Thucydides comments on the possible role of immune response in controlling the Black Death. Dick Gershon speculated that no scientific interest for these interesting observations was put forth at that time. Perhaps the problems, the

Athenians were having with the Spartans, converted money from basis research into the military budget.

### **Surplus Record Machinery & Equipment Directory**

Springer Science & Business Media  
This beautifully illustrated field guide covers 504 of the most common fruiting plants found in Australia's eastern rainforests, as well as a few species that are rare in the wild but generally well-known. These spectacular plants can be seen from Cape York to Victoria, with

some species also found in the Northern Territory, Western Australia and overseas. Rainforest fruits are often beautifully coloured, and in this guide the species are arranged by colour of ripe fruit, then by size and form. Five broad categories - pink to purple, blue to black, yellow and orange to red, green to brown, and white - allow people with even limited botanical knowledge to

identify rainforest fruits. Each species description is accompanied by a leaf drawing, a distribution map, and diagnostic characters to help the reader distinguish similar species. Australian Rainforest Fruits includes stunning artwork by Australia's leading natural history artist, William T Cooper. It will be sought not just by bushwalkers and natural history

enthusiasts, but also by those who admire botanical art at its best. K. N. An  
 Orthopedic Biomechanics Laboratory  
 Department of Orthopedic Surgery Mayo Clinic and Mayo Foundation  
 Rochester, MN 55905, U. S.

A. As surgeons struggle to find new insights into the complex diseases and deformities that involve the wrist and hand, new insights are being provided by applied anatomy, physiology and biomechanics to these important

areas. Indeed, a fresh new interaction of disciplines has immersed in which anatomists, bioengineers and surgeons examine together basic functions and principles that can provide a strong foundation for future growth. Clinical interest in the hand and wrist are now at a peak on an international level. Economic implications of disability affecting the hand and wrist are recognized

that have international scope crossing oceans, cultures, languages and political philosophies. As with any struggle, a common ground for understanding is essential. NATO conferences such as this symposium on Biomechanics of the Hand and Wrist provides such a basis upon which to build discernment of fundamental postulates. As a start, basic research directed at studies of

anatomy, pathology and pathophysiology and mechanical modeling is essential. To take these important steps further forward, funding from government and industry are needed to consider fundamental principles within the material sciences, biomechanical disciplines, applied anatomy and physiology and concepts of engineering modeling that have been applied to other areas of

the musculoskeletal system.

### **Modern Trends in Human Leukemia**

**VIII** CSIRO PUBLISHING

From the creator of the popular blog The Monsters Know What They're Doing comes a compilation of villainous battle plans for Dungeon Masters. In the course of a Dungeons & Dragons game, a Dungeon Master has to make one decision after another in response to player

behavior—and the better the players, the more unpredictable their behavior! It's easy for even an experienced DM to get bogged down in on-the-spot decision-making or to let combat devolve into a boring slugfest, with enemies running directly at the player characters and biting, bashing, and slashing away. In *The Monsters Know What They're Doing*, Keith Ammann lightens the

DM's burden by helping you understand your monsters' abilities and develop battle plans before your fifth edition D&D game session begins. Just as soldiers don't whip out their field manuals for the first time when they're already under fire, a DM shouldn't wait until the PCs have just encountered a dozen bullywugs to figure out how they advance, fight, and retreat. Easy to read and apply, *The*

*Monsters Know What They're Doing* is essential reading for every DM.

## **RETROVIRUSES, RETROELEMENTS AND THEIR RESTRICTIONS**

Robert Hale Human retroviruses, HIV and HTLV have been recognized as important pathogens because of their association with lethal diseases such as AIDS and ATL. Considerable resources and

efforts have been directed at understanding the interaction between these retroviruses and their host which may provide clues as to how the infection can be controlled or prevented. Among the key scientific successes is the identification of intracellular “restriction factors” that have evolved as obstacles to the replication of pathogens including infectious retroviruses. The discovery of APOBEC,

which are strong mutagens of retroviral genomes and intracellular retroelements, began a new era of intense research activities into the spectrum of intrinsic anti-HIV activity, leading to the identification of TRIM5a, BST2/Tetherin, and SAMHD1. In response, HIV has evolved several accessory genes as weaponries to evade these intracellular restriction activities. The intracellular

antiretroviral defenses evolved in response to endogenous retroelements that make up more than 40% of the entire mammalian genome, and which are regarded as ancestors of infectious retroviruses. LTR-type retroelements are present in all higher eukaryotes, representing about 8% of the human genome. Non-LTR retroelements can be found at extremely high copy numbers also,

with a significant portion of mammalian genomes consisting of LINES. Mammalian genomes are modified by LINES through insertions, but also by the indirect replication of non-autonomous retrotransposons such as SINEs. LINES insertion was shown to have played, and continue to play important roles in genomic evolution and somatic genome mosaicism-mediated

physiology. And, because retrotransposition can confer genetic diversity that is beneficial to the host, the vertebrate intrinsic immunity has evolved to support a balance between retroelement insertions that confer beneficial and those that cause deleterious gene disruptions. The articles published in this Research Topic should serve not only as valuable references for the field, but

provide future topics of research for investigators that should further our understanding of the retrovirus, retroelements and their restrictions.

**Virus Infections and the Developing Nervous System**

Springer Science & Business Media  
 "Es ist ja ganz einerlei, wer es gefunden hat, die Hauptsache ist, daß es gefunden worden ist."  
 This was said by Hermann Wilbrand, director of the

department of ophthalmology at the university hospital Hamburg-Eppendorf (1919-1923), when others claimed priority for the long searched for cortical visual center, which he had discovered. Five years ago we tried in Wilsede an unusual experiment, bringing together for three long days and nights scientists and medical doctors to learn like students about each

others work. The hope was that the participants in the workshop would discuss the whole problem of human leukemia, and cooperative programmes among the different specialized research groups and medical centers would be stimulated. Now five years later we feel that the experiment was a success. Cooperative research programmes around the world were started and most of us

understand more and more the Frederic Stohlman question about the practical application of our research and its benefit for the patient. The chairman have done a tremendous job organizing an up to date scientific programme for the third Wilsede meeting. I would like to thank all of them for a programme which includes all the important results and future aspects of human leukemia.

Retroviruses 3  
Springer  
In the Proceedings of this Symposium, papers are presented from leading laboratories worldwide studying human and animal retroviruses and their associated leukemias and other diseases, including AIDS. The volume provides an up-to-date review of the field and indicates possible future developments for cancer

research in which multidisciplinary work, ranging from molecular biology to epidemiology, plays an important role. The book contains 31 papers which are grouped into the following subject areas: lectures; clinical aspects; epidemiology; virus transmission; characterization of viruses; infected cells; AIDS. Frontiers Media SA  
It's one man's story from childhood to

his mid-fifties and counting. He never went looking for adventures or answers to life but because of timing, coincidences, synchronicities, (call it what you will) that started early and have never ended, he has been blessed with a lifetime of stories and then some. He spent his first twenty years in small town Iowa before the U.S. Army decided that they had a need for him. It was February of 1968 and it proved to be a

bad time to be entering the military. After a year in Vietnam he came home intact but a changed young man. He packed up a van and headed west with everything he owned. (Except for the baseball cards that his parents had already thrown away. Damn!) After joining Vietnam Veterans Against the War (John Kerry was their president) he went to D.C. and threw his

medals away on the Capitol steps with a thousand or so other vets who realized that as a country, we could make mistakes and this time we had. He was thrown in jail in Denver with 78 other vets for simply trying to march, as an organization, in the Veteran's Day Parade. It was a tough time for people to stand up to their government but he felt it was important and so did many people. Those actions

changed the direction of our country. "Maybe something like this" the author suggests, "is needed again today". After some bad relationships, he hit the road for 2 1/2 years without an address to call his own. He spent two fairy tale winters in Mexico and Guatemala where he explored caves, found untouched ceynotes, met many characters as well as great friends, and all the while,

he compiled stories. It was then that he began journaling and has never stopped nearly 30 years later and neither have the stories. He had the most vivid dream of his life, which magically, eventually led him to his lovely bride. They have now shared the past quarter of a century together including kids, and grandkids. It's all there along with the lessons and confessions.

De kippen vinden Florrie helemaal niet aardig. Maar haan Hugo weet een oplossing, zodat ze weer allemaal vriendjes worden. Klein prentenboekje met gekleurde afbeeldingen. Vanaf ca. 3 jaar.  
British Business  
Surplus Record

Final volume in a series describing every native and naturalised vascular plant species in NSW. This volume covers monocotyledons, including the Poaceae, the Cyperaceae, the Juncaceae and the Orchidaceae, and contains a key to families of monocotyledons, as well as keys to genera and species. Each species is illustrated with black and white line drawings, and 230 species

are shown in colour photographs. Useful reference for both amateur and professional botanists. Includes references, glossary, a cumulative index of plant names, and an index to families for volumes 1-4. The editor is a senior botanist at the National Herbarium of New South Wales, Royal Botanic Gardens, Sydney.
