Are you an aspiring ABAP cook looking for professional ABAP recipes? Or are you already the executive chef in your ABAP kitchen, just looking for new ideas? Either way, you will find classic and new recipes in ABAP Objects and ABAP/4 for common and specific development tasks in this ABAP Cookbook! This book quickly provides answers to typical ABAP development problems or tasks: persistence programming, interface programming, security and tracing techniques, etc. You'll discover best practices in developing solutions, and you can use this book to broaden your skills and see how to apply ABAP to solve various types of problems. The complexity of the recipes ranges from the simple starter plates to the complex main courses - and some sweet desserts, of course! Each chapter is a short tutorial in itself, all organized and consolidated into an easy-to-read format. Many code samples, screenshots, and different icons will help you to follow the best practices provided. Enjoy your ABAP meal!

1. Best Practices Learn best practices for programming and the solutions to both simple and complex programming problems.
2. Programming Techniques Discover various techniques for

dynamic, database, transactional, persistence, interface, and security programming in ABAP.

3. Comprehensive Approach to Problem Solving Explore the context of a problem, solution alternatives, and the thought process involved in the development of a solution.
4. Instructive Icons Easily identify quick tips, step-by-step instructions, and warnings, thanks to the use of helpful icons throughout the text.
5. Numerous Examples and Source Codes Explore coding examples in every chapter, as well as two source code bundles that you can install on your local AS ABAP system.

Highlights: String Processing Techniques Working with Numbers, Dates, and Bytes Dynamic and Reflective Programming ABAP and Unicode Working with Files Database Programming Transactional Programming XML Processing in ABAP Interacting with the ICF Web Services Sending E-Mails Using BCS Programming for Security Logging and Tracing Interacting with the Operating System Inter-process Communication Parallel and Distributed Processing with RFCs

Write automated unit tests for the ABAP language. This book teaches programmers using simple examples and metaphors and explains the underlying concepts of writing effective automated unit tests. Many, if not most, ABAP programmers learned their programming and testing skills before the ABAP development environment provided an automated unit testing facility. Automated Unit Testing with ABAP: A Practical Approach offers hope and salvation to ABAP programmers who continue to toil with antiquated manual unit testing processes, taking them by the hand and lifting them out of that dungeon of despair with a modern and proven alternative. It begins by explaining how the xUnit family of automated testing frameworks provides a quick and effective means of insuring high-quality software. It then focuses on the ABAP Unit Testing Facility, the xUnit framework applicable specifically to the ABAP language, showing how it can be used to bring ABAP applications under automated testing control, from old legacy applications to those newly written. Whereas xUnit testing has been widely accepted with developers writing in many other programming languages, it is an unfortunate fact in the ABAP community that many programmers still are unfamiliar with xUnit concepts and do not know how to begin implementing automated unit testing into their development process. This book demonstrates how to refactor programs so they become designed for testability, showing how to use process encapsulation and test isolation to facilitate automated testing, including a thorough explanation of test-

driven development and the use of test doubles. The book: Shows how to write automated unit tests for ABAP Instills ABAP programmers with the confidence to refactor poorly written code Explains how an automated testing harness facilitates rapid software development Teaches how to utilize test-driven development (TDD) with ABAP Offers advice and tips on the best ways to write automated unit tests What You Will Learn Become familiar with the xUnit approach to testing Know the ABAP statements that interfere with running automated unit tests and how to accommodate them Understand what it means to isolate code for testing and how this is achieved Gain the confidence to refactor poorly written code Make ABAP programs designed for testability Reap the benefits of spending less time manually unit testing ABAP programs Use test-driven development (TDD) with ABAP programming Use configurable test doubles in ABAP Who This Book Is For ABAP programmers who remain unfamiliar with the automated unit testing facility and those who already use it but want to improve their skill writing and using automated tests. The book addresses the reluctance and trepidation felt by procedural ABAP programmers who need to know some object-oriented concepts to use this facility, expands their horizons, and helps them step through the doorway leading to a different approach to program design.

SAP HCM - A Complete Tutorial Apress

SAP ABAP (Advanced Business Application Programming) offers a detailed tutorial on the numerous features of the core programming platform, used for development for the entire SAP software suite. SAP ABAP uses hands on business oriented use cases and a valuable dedicated e-resource to demonstrate the underlying advanced concepts of the OO ABAP environment and the SAP UI. SAP ABAP covers the latest version (NetWeaver 7.3 and SAP application programming release 6.0) of the platform for demonstrating the customization and implementation phases of the SAP software implementation. Void of theoretical treatments and preoccupation with language syntax, SAP ABAP is a comprehensive, practical one stop solution, which demonstrates and conveys the language's commands and features through hands on examples. The accompanying e-resource is a take off point to the book. SAP ABAP works in tandem with the accompanying e-resource to create an interactive learning environment where the book provides a brief description and an overview of a specified feature/command, showing and discussing the corresponding code. At the reader's option, the user can utilize the accompanying e-resource, where a step-by-step guide to creating and running the feature's object is available. The presentation of the features is scenario oriented, i.e. most of the features are demonstrated in terms of small business scenarios. The e-resource contains the scenario

descriptions, screen shots, detailed screen cams and ABAP program source to enable the reader to create all objects related to the scenario and run/execute them. The underlying concepts of a feature/command are conveyed through execution of these hands-on programs. Further exercises to be performed independently by the reader are also proposed. The demonstration/illustration objects including the programs rely on some of the SAP application tables being populated, for example an IDES system which is now a de facto system for all SAP training related activities.
