Pieter Bruegel the
Elder: Art Discourse in
the Sixteenth-Century
Netherlands examines
the later images by
Bruegel in the context
of two contemporary
discourses - art
theoretical and
convivial. The first
concerns the purely
visual interactions
between artists and
artistic practices that
unfold in pictures,

which often transgress
the categorical
boundaries modern
scholars place on their
work, such as sacred
and profane, antique
and modern, and
Italian and Northern. In
this context, the
images themselves -
those of Bruegel, his
contemporaries and
predecessors - make
up the primary source
material from which
the author argues. The
second deals with the
dialogue that occurred
between viewers in
front of pictures and
the way in which

pictorial strategies facilitated their visual experience and challenged their analytical capabilities. In this regard, the author expands his base of primary sources to include convivial texts, dialogues and correspondences, and texts by rhetoricians and Northern humanists addressing art theoretical issues. Challenging the conventional wisdom that the artist eschewed Italianate influences, this study demonstrates how Bruegel's later peasant paintings reveal a complicated artistic dialogue in which visual concepts and pictorial motifs from Italian and classical ideas are employed for a subject that was increasingly recognized

in the sixteenth century as a specifically Northern phenomenon. Similar to the Dutch rhetorician societies and French Pléiade poets who cultivated the vernacular language using classical Latin, the function of this inter pictorial discourse, the author argues, was not simply to imitate international trends, a common practice during the period, but to use it to cultivate his own visual vernacular language. Although the focus is primarily on Bruegel's later work, the author's conclusions are applied to sketch a broader understanding of both the artist himself and the vibrant artistic dialogue occurring in the Netherlands. *Women's Health in General Practice*

Cancer Genomics addresses how recent technological advances in genomics are shaping how we diagnose and treat cancer. Built on the historical context of cancer genetics over the past 30 years, the book provides a snapshot of the current issues and state-of-the-art technologies used in cancer genomics. Subsequent chapters highlight how these approaches have informed our understanding of hereditary cancer syndromes and the diagnosis, treatment and outcome in a variety of adult and pediatric solid tumors and hematologic malignancies. The dramatic increase in cancer genomics

research and ever-increasing availability of genomic testing are not without significant ethical issues, which are addressed in the context of the return of research results and the legal considerations underlying the commercialization of genomic discoveries. Finally, the book concludes with "Future Directions", examining the next great challenges to face the field of cancer genomics, namely the contribution of non-coding RNAs to disease pathogenesis and the interaction of the human genome with the environment. Tools such as sidebars, key concept summaries, a glossary, and acronym and abbreviation definitions make this book highly accessible

to researchers from several fields associated with cancer genomics.

Contributions from thought leaders provide valuable historical perspective to relate the advances in the field to current technologies and literature.

Completely updated and revised, *Cruise Ship Tourism*, 2nd Edition covers the economic, social and environmental impacts of cruising, combining the latest knowledge and research to provide a

comprehensive account of the subject. Despite the industry growing rapidly, there is a substantial gap in the related literature,

and this book addresses the key issues for researchers, students and industry professionals. A valuable 'one-stop-shop' for those interested in cruise ships and maritime tourism, this new edition from major names in the field is also an invaluable resource for anyone concerned more widely with tourism and business development.

ESSAYS ON LEADERSHIP ETHICS

Academic Press

One of the chief challenges of the

Second Vatican Council was to reclaim the meaning of baptism, especially as the foundation of service and mission in the world. Fifty years after the close of that watershed gathering, nineteen distinguished religious leaders and scholars reexamine that challenge and its implications for preaching and ministry today. This book reinvigorates an important conversation.

Laudato Si' and Catholic Social Thought in an Era of Climate Crisis Edward Elgar Pub

Significant sustained Lean success depends almost solely on leaders and the culture they foster. No doubt some area-specific and short-term gains can be realized via a top-down, tools-based

approach. But broad, ongoing and organic improvement that is embraced by almost all employees requires a unique environment, one carefully defined and nurtured by leaders. Unfortunately, many leaders and managers embark on their Lean initiative with a focus on tools either observed during a benchmarking tour, disclosed during a short symposium presentation, or peddled by their chosen Lean partner. They are ill-equipped to understand the critical behavior and attitude changes that will be required of them and their staff to sustain tools-based improvements and, more importantly, to effectively promote and harvest employees' innovation

to remove waste. Working Great! provides an overview of a successful Lean journey. Just as a would-be traveler consults a travel brochure and websites prior to reserving a seat on a given vacation tour, this book provides potential Lean leaders with an overview prior to embarking on a Lean initiative. And unlike purely promotional materials, Working Great! provides an honest, culture-first assessment of Lean with an emphasis on the leaders' responsibilities for a successful mission - and the information required to determine if they and their organization are up for the journey. Working Great! gives readers: A clear understanding of

the relative importance and relationship between culture and tools for lasting Lean success Advice on various key strategic decisions such as choosing an external consultant and an internal coordinator Lessons to help take the mystery out of culture A heavy emphasis on specific critical leadership behaviors which support the desired culture Suggestions for selecting new employees and, more importantly, supervisors that will thrive in a Lean environment Recommendations for effectively "rounding" on employees; a vital habit for Lean leaders An appreciation for the importance of - and tools to aid in - prioritizing and

managing personal time as leaders shift their focus to building a Lean organization (including the significance of time off) Information on how various Lean tools support a Lean culture and are not a destination in themselves Case studies to describe realistic aspirations and to provide inspiration and encouragement during inevitable setbacks Pieter Bruegel the Elder Wipf and Stock Publishers

In the nearly 60 years since Watson and Crick proposed the double helical structure of DNA, the molecule of heredity, waves of discoveries have made genetics the most thrilling field in the sciences. The study of genes and genomics today explores all aspects of the life with relevance in the lab, in the doctor's office, in the courtroom and even in social relationships. In this helpful guidebook, one of the most respected and accomplished human geneticists of our time communicates the importance of genes and genomics studies in all aspects of life. With the use of core concepts and the integration of extensive references,

this book provides students and professionals alike with the most in-depth view of the current state of the science and its relevance across disciplines. Bridges the gap between basic human genetic understanding and one of the most promising avenues for advances in the diagnosis, prevention and treatment of human disease. Includes the latest information on diagnostic testing, population screening, predicting disease susceptibility, pharmacogenomics and more. Explores ethical, legal, regulatory and economic aspects of genomics in medicine. Integrates historical (classical) genetics approach with the latest discoveries in

structural and functional genomics

Upon its release several years ago, *The Beautiful Tree* was instantly embraced and praised by individuals and organizations across the globe. James Tooley's extraordinary ability to braid together personal experience, community action, individual courage, and family devotion, brought readers to the very heart of education. This book follows Tooley in his travels from the largest shanty town in Africa to the mountains of Gansu, China, and of the children, parents,

teachers, and entrepreneurs who taught him that the poor are not waiting for educational handouts. They are building their own schools and learning to save themselves. Now in paperback with a new postscript, *The Beautiful Tree* is not another book lamenting what has gone wrong in some of the world's poorest communities. It is a book about what is going right, and powerfully demonstrates how the entrepreneurial spirit and the love of parents for their children can be found in every corner of the globe.

Praise for Results That Last "Quint Studer is a superb communicator with a deep belief in the power of relationships. His informal tone, sense of humor, and real-world stories bring his business principles to life. Results That Last has a vital, optimistic quality that will keep readers re-reading long after other leadership books have been relegated to a dark corner of the shelf." -- Nido Qubein, author of How to Get Anything You Want; President, High Point University; Chairman, Great Harvest Bread Company; and founder, National Speakers Association Foundation "Results That Last is

long overdue and fills a big gap in effective business management. There are legions of books that show us the way to achieve successful results in business, but very few that teach us how to institutionalize success. In reality, achieving success is the easy part. The real challenge is to achieve results that last. Quint Studer not only proves it is possible to hardwire a culture for lasting results, but lays out a simple, logical, and effective way to do so. Anyone who wants to make success a habit needs to read this book." --Bob MacDonald, former CEO, Allianz Life of North America and author of Beat the System: 11 Secrets to Building an Entrepreneurial Culture

in a Bureaucratic World
"I have always been fascinated by how the various parts of an organization work together to achieve strategic objectives. In Results That Last, Quint Studer explores the complex subject of performance improvement in a fresh, readable, and easy-to-grasp way. By standardizing certain business practices and leader behaviors, any company in any field can create an environment that allows it to achieve and sustain long-term results." --David F. First published in 1974, with a second, revised edition in 1980, *Beyond the New Morality* has been used widely in introductory ethics courses at the undergraduate level. The book appeals to those who want something not overburdened with theory, and presented in a contemporary idiom. In this third edition of the now standard classroom text, Grisez and Shaw retain the best elements of the earlier versions, including their clear, straightforward presentation and use of nontechnical language. Although the basic approach, content, and organization remain substantially the same, the new edition does develop and amend

some aspects of the theory. For example, the community dimension of morality is brought out more clearly and the first principle of morality is now formulated more accurately in terms of willing in line with integral human fulfillment.

FOOD GELS

Springer
It was through control of the shattering of wild seeds that humans first domesticated plants. Now control over those very plants threatens to shatter the world's food supply, as loss of genetic diversity sets the stage for widespread hunger. Large-scale agriculture has come to favor uniformity in food crops. More than 7,000 U.S. apple varieties

once grew in American orchards; 6,000 of them are no longer available. Every broccoli variety offered through seed catalogs in 1900 has now disappeared. As the international genetics supply industry absorbs seed companies—with nearly one thousand takeovers since 1970—this trend toward uniformity seems likely to continue; and as third world agriculture is brought in line with international business interests, the gene pools of humanity's most basic foods are threatened. The consequences are more than culinary. Without the genetic diversity from which farmers traditionally breed for resistance to diseases, crops are

more susceptible to the spread of pestilence. Tragedies like the Irish Potato Famine may be thought of today as ancient history; yet the U.S. corn blight of 1970 shows that technologically based agribusiness is a breeding ground for disaster. Shattering reviews the development of genetic diversity over 10,000 years of human agriculture, then exposes its loss in our lifetime at the hands of political and economic forces. The possibility of crisis is real; this book shows that it may not be too late to avert it.

Alasdair MacIntyre explores some central philosophical, political and moral claims of modernity and argues that a proper

understanding of human goods requires a rejection of these claims. In a wide-ranging discussion, he considers how normative and evaluative judgments are to be understood, how desire and practical reasoning are to be characterized, what it is to have adequate self-knowledge, and what part narrative plays in our understanding of human lives. He asks, further, what it would be to understand the modern condition from a neo-Aristotelian or Thomistic perspective, and argues that Thomistic Aristotelianism, informed by Marx's insights, provides us with resources for constructing a contemporary politics and ethics which both

enable and require us to act against modernity from within modernity. This rich and important book builds on and advances MacIntyre's thinking in ethics and moral philosophy, and will be of great interest to readers in both fields. *International 777 Order of Twelve 333 of Knights and Daughters of Tabor* SAGE Publications

The processes of globalisation are reshaping our world dramatically and rapidly. The great issues of our day emphasise that we are all in this together: startling inequalities, pressures on the environment, continuing hunger and poverty, climate change, economic integration, mass migrations, instant

communications and recurring armed conflicts. How do we ensure that these vast developments work for the 'common good', promote greater social equity and better life opportunities, especially for the most disadvantaged? In this issue of *Interface*, scholars from the Yarra Institute for Religion and Social Policy within Melbourne's University of Divinity tackle key aspects of globalisation.

The history of documentary has been one of adaptation and change, as documentarists have harnessed the affordances of emerging technology. In the last decade interactive documentaries (i-docs) have become established as a new field of practice within non-fiction storytelling. Their various incarnations are now a focus at leading film festivals (IDFA DocLab, Tribeca Storyscapes, Sheffield DocFest),

major international awards have been won, and they are increasingly the subject of academic study. This anthology looks at the creative practices, purposes and ethics that lie behind these emergent forms. Expert contributions, case studies and interviews with major figures in the field address the production processes that lie behind interactive documentary, as well as the political, cultural and geographic contexts in which they are emerging and the media ecology that supports them. Taking a broad view of interactive documentary as any work which engages with 'the real' by employing digital interactive technology,

this volume addresses a range of platforms and environments, from web-docs and virtual reality to mobile media and live performance. It thus explores the challenges that face interactive documentary practitioners and scholars, and proposes new ways of producing and engaging with interactive factual content.

The food technologist who wishes to produce a gelled product is faced with two basic options for achieving the desired effect; whether to use a protein or a polysaccharide. Although a gel can be formed by either a protein or a

polysaccharide, the resultant gels have different characteristics: • Polysaccharide gels are characterised by their fine texture and transparency which is achieved at a low polymer concentration. They can be formed by heating and cooling, pH adjustment or specific ion addition . • Protein gels are characterised by a higher polymer concentration (5-10%) and are formed almost exclusively by heat denaturation. Before reaching a final decision, the technologist must take a number of factors into consideration. The purpose of this book is

to help the technologist in his choice by providing fundamental practical information, in one book, on the properties of gels (and factors which influence them) for both types of biopolymer. To help the reader, each chapter is (wherever possible) organised in the same way so that, for example, information on structure will always be available in section 2. The examples in the Applications section of each chapter are not meant to be exhaustive, but to illustrate the various ways in which the particular polymer can be used to form a gelled product.
