The Engineer's Clean Air Handbook is written for engineers but in a language which should be understandable to anyone who may be directly involved in or concerned about atmospheric contamination. It concentrates on achieving clean air and on the more general aspects of pollution. The book begins with the description and make-up of the atmosphere, the size and nature of the atmospheric content, sources of contamination, and risk assessment from atmospheric contamination. Subsequent sections focus on air filters and filtration systems, instrumentation for monitoring and control of atmospheric contamination, ventilation and the quality of breathing air, and the relationship of atmospheric contamination and health. Environmentalists, engineers, and ecologists will find the book useful.

The Engineering Index Wrightstone, Gregory

Al Gore has been a passionate advocate of action to halt climate change for many years. In his bestselling book *An Inconvenient Truth*, adapted from his acclaimed film, he wrote about the urgent need to address the problems of climate change, presenting comprehensive facts and information on all aspects of global warming in a direct, thoughtful and compelling way, using explanatory diagrams and dramatic photographs to clarify and highlight key issues. Adopting the same lucid technique in *Our Choice*, he proposes solutions at every level of our lives, from the personal and local, to the national and political, to the area of international policy and law. For this young adult edition, the text has been edited down with a 12-year-old-plus readership in mind, so sections aimed specifically at adults will be omitted in favour of clear text, appropriate photographs and easily understandable graphs. The overall aim is to gear the content towards the people who will, in fact, be dealing with global warming throughout their lives.

Bloomsbury Publishing

'Well researched, clearly written, beautifully presented and, above all, fact-packed books such as *Inconvenient Facts* are absolutely essential to the very survival of democracy, to the restoration of true science, and to the ultimate triumph of objective truth.'-Christopher Monckton, Viscount of Brenchley
