Pediatric First Aid, CPR, and AED is a first edition product for McGraw-Hill Higher Education. Part of a series of titles authored by the National Safety Council, Pediatric First Aid, CPR, and AED covers the material required in a Standard First Aid, CPR and AED course. The focus is teaching the layperson to recognize and act in any pediatric emergency and to sustain life until professional help can arrive. Quality content features information based on the current national guidelines for breathing and cardiac emergencies. Other information includes

bleeding control, and first aid for sudden illnesses and injuries. Focus is also on preventing injury and illness in children and the first aid for common illnesses and injuries that children sustain. Information is presented in a concise easy-to-read manner that works as a handy reference after the course. National Safety Council programs and products are designed to benefit all types of learning styles by combining lectures, video presentations, group discussions, and hands-on training.

During the early years of the AIDS epidemic, thousands of Americans became infected with HIV through the nation's blood supply. Because little reliable information existed at the time AIDS first began showing up in hemophiliacs and in others who had received transfusions, experts disagreed about whether blood

and blood products could transmit the disease. During this period of great uncertainty, decisionmaking regarding the blood supply became increasingly difficult and fraught with risk. This volume provides a balanced inquiry into the blood safety controversy, which involves private sexual practices, personal tragedy for the victims of HIV/AIDS, and public confidence in America's blood services system. The book focuses on critical decisions as information about the danger to the blood supply emerged. The committee draws conclusions about what was done--and recommends what should be done to produce better outcomes in the face of future threats to blood safety. The committee frames its analysis around four critical areas: Product treatment--Could effective methods for inactivating HIV in blood have been introduced sooner? Donor screening and referral--including a review of screening to exclude high-risk individuals. Regulations and recall of contaminated blood--analyzing decisions by federal agencies and the private sector. Risk communication--examining whether infections could have been averted by better communication of the risks.

This New American Red Cross CPR/AED for the Professional Rescuer Participant's Manual and course reflect changes based on the 2005 Consensus on Science for CPR and Emergency Cardiovascular Care (ECC) and the Guidelines 2005 for First Aid. Changes to this program and manual include simplifications to many of the CPR skill sequences, which helps improve retention. There have also been changes to help improve the quality of CPR. The integration of CPR skills into the operation of AEDs had changed to help improve survival from sudden cardiac arrest. Professional rescuers are now trained to use AEDs on adults and children. Information has been updated and added to this program to help professional rescuers administer epinephrine, aspirin and fixed-flow-rate oxygen. The skills learned in this course include adult, child and infant rescue breathing, conscious and unconscious choking, CPR, two-

rescuer CPR and adult and child AED.
Additional training can be added to this
course including bloodborne pathogens

training and emergency oxygen
administration. While the skills and
knowledge that professional rescuers use
are increasing, this training will help you

meet your most important responsibility
as a professional rescuer- the
responsibility to save lives.
