Published every year, the report analyses the state of working Europe explaining with the aid of statistics and graphs the main trends in terms of Europe's macro-economic situation, its labour market development, the situation of wages and collective bargaining, and worker participation. The focus of this year's Benchmarking report is on the lessons learned - or not learned - from eight years of economic crisis and austerity policy. The findings point to policy failures and to

the need to redefine alternatives in order to get Europe back on a sustainable growth path. The deterioration of the labour market and social situation in the EU, along with the appointment of a new Commission last autumn, have led to some renewed policy initiatives that seek to restore growth as a means of addressing the situation. The most notable of these initiatives is the Annual Growth Survey with its three pillars: the Investment Plan, fiscal responsibility and structural reforms.

This Technical Note discusses the findings and recommendations of the Financial Sector Assessment Program for the Netherlands regarding auditor oversight, collective investment fund management, and regulatory issues. The legal regime and the day-to-day supervision activities conducted by the Netherlands Authority for the Financial Markets and the Dutch central bank are extensive and consistent with international expectations. The approach to the supervision of the small but growing crowd-funding sector strikes a fair balance between enhancing innovation and protecting investors. The Dutch regime for audits and auditor oversight also complies with the expectations of the International Organization of Securities Commissions

and appears to work well in practice. Performance Measurement Systems in Banks Partridge Publishing Singapore Management ideas, and their associated applications, have become a prevalent feature of our working lives. While their focus is familiar, such as efficiency, motivation, and improvement, they range from specific notions such as activity-based costing, to broad movements like corporate social responsibility. This Handbook brings together some of the latest research from leading international scholars on how management ideas are produced, promoted, and adapted, and their effects on business and working practices and society at large. Rather than focusing on specific management ideas, this volume explores their key socio-political contexts and channels of dissemination, and is organized around four core overlapping themes. The first section sets out the research field in general, in terms of both an overall system and of different perspectives and research methods. The second section explores the role of different actors and channels of diffusion, including the consumers and producers of management ideas and 'new'

media, as well as traditional players in the management ideas field such as consultancies and business schools. The third section focuses on specific features or dynamics of the management ideas system, such as their adoption, evolution, institutionalisation, and resurgence, while in the final section, critical and new perspectives on management ideas are examined, highlighting specific socio-political contexts and the possibility of alternative ideas and forms of critique. With a broad range of perspectives represented, this Handbook provides a comprehensive, authoritative, and enduring resource for those studying management, innovation, and organizational change, as well as for those working in the management ideas industry.

The reputation of corporate reporting has been in crisis. Trust in the process of financial accounting and auditing has been undermined by a series of high profile scandals involving major corporations, including Enron, Parmalat, Ahold, and Worldcom. In response, regulators and practitioners world-wide have put forward a series of initiatives to repair the damage and restore faith in corporate governance. In this important book, the European Auditing Research Network analyzes how that response has developed in Europe, with particular emphasis on the field of auditing. Leading international academics review how regulation has been revised in specific European countries to help restore confidence in the contribution of auditing to corporate governance. Various themes are explored, including the growing trend of internationalization in regulation, ethics

and auditing, professional liability, and professional education. *Auditing, Trust and Governance* is an invaluable volume for students, researchers and professionals working in the fields of auditing, accountancy and corporate governance, and provides a useful basis for further research on the effects of the increased regulation.

This book analyses EU food law from a regulatory, economic and managerial perspective. It presents an economic assessment of strategies of food safety regulation, and discusses the different regulatory regimes in EU food law. It examines the challenges of food safety in the internal market as well as the regulatory tools that are available. The book's generic theorising and measurement of regulatory effects is supplemented by detailed analysis of key topics in food markets, such as health claims, enforcement strategies, and induced risk management at the level of the organizations producing food. The regulatory effects discussed in the book range from classical regulatory analysis covering e.g. effects of ex-ante versus ex-

post regulation and content-related versus information-related regulation to new regulatory options such as behavioral regulation. The book takes as its premise the idea that economic considerations are basic to the design and functioning of the European food supply arena, and that economic effects consolidate or induce modification of the present legal structures and principles. The assessments, analyses and examination of the various issues presented in the book serve to answer the question of how economic theory and practice can explain and enhance the shaping and modification of the regulatory framework that fosters safe and sustainable food supply chains.

### ACCOUNTANCY

Oxford University Press, USA

Audit professionals are valued members of society and are expected to be both skilled and ethical in their decision-making. The role of the auditor extends far beyond that of counting beans by demanding a social and political awareness, a technical knowledge, ethical principles and relationship skills. In addition, due to the team-oriented nature of the audit

approach, auditors require strong team-building and interpersonal skills. This book offers expert descriptions of, and insights into, how such skills and responsibilities can be inculcated in tertiary education and professional training environments. Unlike other books which focus on auditing as a technical process, this volume examines auditing from a teaching and learning perspective. Expert contributors provide authoritative insights into an audit education which is embedded in accounting practice. The book's descriptions of these insights into improving education for future audit professionals may allow the introduction of new and challenging fields of enquiry. Audit Education will be of great interest to educators in tertiary institutions, trainers in professional firms, and key individuals in accounting professional bodies seeking to ensure their members possess acceptable levels of attainment for admission and continued membership. This book was originally published as a

special issue of Accounting Education: an international journal.
