This title brings together studies of different types of population displacement in Ethiopia and analyses them in relation to each other.

Cambridge University Press

The ethnography of the Konso people of southern Ethiopia by A. E. Jensen goes back to his research in Konso in 1954/55. Following his research, Jensen wrote the present work, which he did not publish. The book follows on from his book *In the Land of Gada*, published in 1936, which was based on his research in 1934/35 in the same region. It is a classic ethnography divided into the following chapters: The country and its people, social life, offices, clans and caste system, religious and spiritual life, and oral traditions. The ethnography is illustrated by historical photographs from the archives of the Frobenius Institute.

While the world taps its feet, Ethiopia breakdances with its shoulders. This is an uplifting, inspirational country which confounds expectations. It's no featureless desert but a land of majestic landscapes surrounding a vast, fertile plateau. The rock-hewn churches in its medieval capital, Lalibela, are regarded by many as the eighth wonder of the world. Its people are welcoming, proud and besotted by their own culture and history. Bradt's Ethiopia is the most thorough guide available to this country rich in culture, history and dramatic scenery, and has been highly praised by both travel press and readers. 'Thorough and reassuring, it provides all the practical and background

information to make readers leap from their armchairs and visit this vast, magical country' The Daily Telegraph (UK) [Ethiopia & Eritrea Living Terraces in Ethiopia](#) Konso Landscape, Culture & Development

Academic Paper from the year 2018 in the subject Agrarian Studies, , language: English, abstract: This article examines the drivers, pressures, and impacts of land degradation on the ecosystem services and livelihood of the Konso people. To deal with the problem of land degradation, the People of Konso have been practicing well organized and innovative adaptation strategies in the form of indigenous soil and water conservation. The people are well known for their indigenous knowledge and skills of land management. Particularly, the antique and beautiful terraces, traditional agro forestry practices, and efficient irrigation methods are the prominent features of the Konso agricultural system. The people have been a model for the global community and their cultural landscape was registered by the UNESCO as one of the world's heritage sites. The indigenous soil and water conservation practices have enabled the community to manage and live in a callous natural environment. However, these practices are now under the threat due to multiple factors which requires the attention of all stakeholders, principally of the Konso people (that is primarily responsible to maintain its identity of soil and water conservation).

[Volume I: Ethiopia and Kenya](#) Routledge Nella valle del fiume Omo ai confini dell'Etiopia vivono sedici minoranze etniche che hanno avuto ben scarsi cambiamenti nel corso della loro storia. L'autore ha cercato di non dare solamente un carnet di viaggio, e nemmeno una mera descrizione come negli asettici rapporti etnografici, ma di prestare attenzione alle dinamiche sociali, in una prospettiva diacronica e storica, accennando alle correnti interne a quelle culture e alle incipienti critiche e trasformazioni in atto, e dunque rendendo la dimensione della complessità delle modifiche di mentalità.

Deepening Crisis Routledge Geoarchaeology is a major branch of archaeological science at the interfaces between geology, geography and archaeology, involving the combined study of archaeological, soil and geomorphological records and the recognition of how natural, climatic and human-induced processes alter landscapes. The formation and modification of past soils, and occupation sequences can be examined primarily

through the use of soil micromorphological techniques and various physical and geochemical techniques. This short text aims to explain some of the basics of geoarchaeological approaches and research design used to tackle the investigation of landscapes and settlement archaeology, and the application of soil micromorphology to archaeological situations. The intention is to present a basic handbook of good practice, with case studies and examples, that any archaeologist or aspiring geoarchaeologist can use.

The Gabra □□□

A study of communities in the Horn of Africa where reciprocity is a dominant social principle, offering a concrete countermodel to the hierarchical state. Over the course of history, people have developed many varieties of communal life; the state, with its hierarchical structure, is only one of the possibilities for society. In this book, leading anthropologist Hermann Amborn identifies a countermodel to the state, describing communities where reciprocity is a dominant social principle and where egalitarianism is a matter of course. He pays particular attention to such communities in the Horn of Africa, where nonhierarchical, nonstate societies exist within the borders of a hierarchical structured state. This form of community, Amborn shows, is not a historical forerunner to monarchy or the primitive state, nor is it obsolete as a social model. These communities offer a concrete counterexample to societies with strict hierarchical structures. Amborn investigates social forms of expression, ideas, practices, and institutions that oppose the hegemony of one group over another, exploring how conceptions of values and laws counteract tendencies toward the accumulation of power. He examines not only how the nonhegemonic ethos is reflected in law but also how anarchic social formations can exist. In the Horn of Africa, the autonomous jurisdiction of these societies protects against destructive outside influences, offers a counterweight to hegemonic violence, and contributes to the stabilization of communal life. In an era of widespread dissatisfaction with Western political systems, Amborn's study offers an opportunity to shift from traditional theories of anarchism and nonhegemony that project a stateless society to consider instead stateless societies already in operation.

PROGRESS IN AFRICAN

ARCHAEOBOTANY

Routledge

One of the world centers of crop evolution and origin, Ethiopia has long been recognized as an important area of diversity for several major and various minor crops. Based on an international conference held in Addis Ababa, this book describes how plant genetic diversity in Ethiopia is of vital importance in breeding new varieties of crops with desirable characteristics, such as increased resistance to pests and diseases and greater adaptation to heat and drought. The three main sections in the book consider the Ethiopian center of diversity, germ plasm or genetic material collection and conservation in Ethiopia, and the evaluation and utilization of Ethiopian genetic resources. A broad range of food and feed crops and plants of medicinal and industrial importance are discussed, both at a national and international level. A brief account of conservation strategies and gene bank problems unique to Ethiopia is also given. The importance of Ethiopia's plant genetic resources to world agriculture has been demonstrated on more than one occasion. Plant breeders, geneticists, and botanists throughout the world will, therefore, find this unique book a valuable source of information and an essential reference work.

Transforming Konso towards Green Economy through Integrated Land Management Oxford University Press Agriculture in Sub-Saharan Africa is constrained by highly variable rainfall, frequent drought and low water productivity. There is an urgent need, heightened by climate change, for appropriate technologies to address this problem through managing and increasing the quantity of water on farmers' fields – water harvesting. This book defines water harvesting as a set of approaches which occupy an intermediate position along the water-management spectrum extending from in situ moisture conservation to irrigated agriculture. They generally comprise small-scale systems that induce, collect, store and make use of local surface runoff for agriculture. The authors review development experience and set out the state of the art of water harvesting for crop production and other benefits in Sub-Saharan Africa. This includes an assessment of water harvesting schemes that were initiated two or three decades ago when interest was stimulated by the droughts of the 1970s and 1980s. These provide lessons to promote sustainable development of dryland agriculture in the face of changing environmental

conditions. Case studies from eight countries across Sub-Saharan Africa provide the evidence base. Each follows a similar format and is based on assessments conducted in collaboration with in-country partners, with a focus on attempts to promote adoption of water harvesting, both horizontally (spread) and vertically (institutionalization). Introductory cross-cutting chapters as well as an analytical conclusion are also included.

A Study of the Values of a Cushitic People
LIT Verlag Münster

Living Terraces is both an ethnographic and historical account of the terraces of Konso in southern Ethiopia.

New Archaeological Perspectives for the Twenty-First Century Cambridge University Press

This latest issue of the James Backhouse Lecture Series looks at the issue of Earth restoration from a religious perspective. The author is passionate about restoring environments and considers permaculture 'sacred' knowledge to be carried and shared with others.

A DEMANDING AND UNCERTAIN ADVENTURE

Cambridge University Press
Africa is a vast continent, home to many millions of people. Its history stretches back millennia and encompasses some of the most ancient civilizations in the world. Modern Africa boasts a rich cultural heritage, the legacy of many diverse influences from all around the world, reflecting the central role African plays in world history. *Encyclopedia of African Peoples* provides extensive information about Africa's cultures, history, geography, economics, and politics; it provides an invaluable overview of the whole continent, region by region, ethnic group by ethnic group, nation by nation, personality by personality. Sections include: *Africa Today * The Peoples of Africa * Culture and History * The Nations of Africa * Biographies Past to Present * Glossary * Index.

CAMEL NOMADS OF NORTHERN KENYA

Paulines Publications Africa
There is an essential connection between humans and plants, cultures and environments, and this is especially evident looking at the long history of the African continent. This book, comprising current research in archaeobotany on Africa, elucidates human adaptation and innovation with respect to the exploitation of plant resources. In the long-term perspective climatic changes of the

environment as well as human impact have posed constant challenges to the interaction between peoples and the plants growing in different countries and latitudes. This book provides an insight into/overview of the manifold routes people have taken in various parts Africa in order to make a decent living from the provisions of their environment by bringing together the analyses of macroscopic and microscopic plant remains with ethnographic, botanical, geographical and linguistic research. The numerous chapters cover almost all the continent countries, and were prepared by most of the scholars who study African archaeobotany, i.e. the complex and composite history of plant uses and environmental transformations during the Holocene.

ETHIOPIA

Boydell & Brewer
The XVth International Conference of Ethiopian Studies took place in Hamburg in July 2003. More than 400 scientists from over 25 countries participated. 130 contributions from the program were selected for this volume. They are mostly written in English and deal on the regions of Ethiopia and Eritrea and cover the span from the 4th Century to the present. The volume is divided into the following chapters: Anthropology (20 Articles), History (25), Arts (10), Literature and Philology (10), Religion (5), Languages and Linguistics (25), Law and Politics (10), Environmental, Economic and Educational Issues (10).

Water Harvesting in Sub-Saharan Africa
James Currey Limited

The environment has always been a central concept for archaeologists and, although it has been conceived in many ways, its role in archaeological explanation has fluctuated from a mere backdrop to human action, to a primary factor in the understanding of society and social change. Archaeology also has a unique position as its base of interest places it temporally between geological and ethnographic timescales, spatially between global and local dimensions, and epistemologically between empirical studies of environmental change and more heuristic studies of cultural practice. Drawing on data from across the globe at a variety of temporal and spatial scales, this volume resituates the way in which archaeologists use and apply the concept of the environment. Each chapter critically explores the potential for archaeological data and practice to contribute to modern environmental issues, including problems of climate change and environmental

degradation. Overall the volume covers four basic themes: archaeological approaches to the way in which both scientists and locals conceive of the relationship between humans and their environment, applied environmental archaeology, the archaeology of disaster, and new interdisciplinary directions. The volume will be of interest to students and established archaeologists, as well as practitioners from a range of applied disciplines.

and other forbidden topics Mimesis
Dass sich gesellschaftliches Zusammenleben auch anders als in Form hierarchisch aufgebauten Staaten organisieren ließe, ist für viele Mitglieder westlicher Gesellschaften kaum vorstellbar. Doch auch abgesehen von den Träumereien romantischer Utopisten gibt es heute funktionierende Gesellschaften jenseits staatlicher Einflüsse, die auf Rechtsverfahren und Problemlösungsmechanismen ohne Herrschaft basieren. Anhand empirischer Untersuchungen in nicht-hierarchischen Gesellschaften am Horn von Afrika stellt diese Studie staatliche und herrschaftsfreie Gemeinschaftsordnungen einander gegenüber und analysiert die institutionellen Elemente eines anarchischen Miteinanders, die durch Konsensfindung und ethisch basierten Integrationsmechanismen zur Stabilisierung dieser Gesellschaftsform beitragen, was auch für die westliche Welt Anregungen bietet.

The Historical Ecology of Enduring Landscape Modifications Oxford : Clarendon Press

Routledge is proud to be re-issuing this landmark series in association with the International African Institute. The series, published between 1950 and 1977, brings together a wealth of previously un-coordinated material on the ethnic groupings and social conditions of African peoples. Concise, critical and (for its time) accurate, the *Ethnographic Survey* contains sections as follows: Physical Environment Linguistic Data Demography History & Traditions of Origin Nomenclature Grouping Cultural Features: Religion, Witchcraft, Birth, Initiation, Burial Social & Political Organization: Kinship, Marriage, Inheritance, Slavery, Land Tenure, Warfare & Justice Economy & Trade Domestic Architecture Each of the 50 volumes will be available to buy individually, and these are organized into regional sub-groups: East Central Africa, North-Eastern Africa, Southern Africa, West Central Africa, Western Africa, and Central Africa Belgian Congo. The volumes are supplemented with maps, available to view on

routledge.com or available as a pdf from the publishers.
