Much is expected of private financing to help meet the infrastructure requirements of the rapidly growing East Asian economies. Although private financing grew briskly during the 1990s, it represents only a small share of all infrastructure investment in the region (between 12 and 18 percent). This monograph draws on experience in a number of countries in East Asia, as well as Australia, Chile, and India, to analyze the impediments to and prospects for private financing of infrastructure. The chapters discuss the choices available to policymakers and the strategies that governments have followed. An overview chapter describes recent trends in international financing of infrastructure projects in the region, discusses the key policy and institutional impediments to greater private participation, and assesses the role of domestic capital markets and finance. It also outlines a national and regional strategy for stimulating private investment in infrastructure. The case studies from countries outside East Asia illustrate the payoffs of increased integration and concerted moves toward private provision of infrastructure.

This book provides the reader with essential tools needed to analyze complex societal issues and demonstrates the transition from physics to modern-day laws and treaties. This second edition features new equation-oriented material and extensive data sets drawing upon current information from experts in their fields. Problems to challenge the reader and extend discussion are presented on three timely issues: • National Security: Weapons, Offense, Defense, Verification, Nuclear Proliferation, Terrorism • Environment: Air/Water, Nuclear, Climate Change, EM Fields/Epidemiology • Energy: Current Energy Situation, Buildings, Solar Buildings, Renewable Energy, Enhanced End-Use Efficiency, Transportation, Economics Praise for the first edition: "This insight is needed in Congress and the Executive Branch. Hafemeister, a former Congressional fellow with wide Washington experience, has written a book for physicists, chemists and engineers who want to learn science and policy on weapons, energy, and the environment. Scientists who want to make a difference will want this book." Richard Scribner, first Director, Congressional Science and Engineering Fellow Program, AAAS "Hafemeister shows how much one can understand about nuclear weapons and missile issues through simple back-of-the-envelope calculations. He also provides compact explanations of the partially successful attempts that have been made over the past 60 years to control these weapons of mass destruction. Hopefully, Physics of Societal Issues will help interest a new generation of physicists in continuing this work." Frank von Hippel, Professor, Princeton, former Assistant Director, National Security, White House, OSTP "Energy policy must be quantitative. People who don't calculate economic tradeoffs often champion simplistic hardware. 'The solution is more... nuclear power, or electric cars, or photovoltaics, etc.' Some simple physics will show that the true solution matches supply and demand as an 'integrated resource plan.' Physics of Societal Issues is a good place to begin this journey." Arthur Rosenfeld, former California Energy Commissioner, Professor-emeritus, U. of California-Berkeley

MODERN DIESEL TECHNOLOGY: LIGHT DUTY DIESELS, Second Edition, provides a thorough introduction to the light-duty diesel engine, the engine of choice to optimize fuel efficiency and longevity in workhorse pickup trucks, refrigeration units, agricultural equipment and generators. While the major emphasis is on highway usage, best-selling author Sean Bennett also addresses current and legacy, small stationary and mobile off-highway diesels. Using a modularized structure, Bennett helps readers achieve a strong conceptual grounding in diesel engine technology while emphasizing hands-on technical competency. The text explores current diesel engine subsystems and management electronics in detail, while also providing a solid foundation in mechanical engine systems. All generations of CAN-bus technology are covered, including the basics of network bus troubleshooting. The author uses simple language to make even complex concepts easier to master and focuses on helping readers gain the knowledge and expertise they need for career success as diesel technicians, including addressing ASE A9 task learning objectives in detail. Since the 1960s, the class action lawsuit has been a powerful tool for holding businesses accountable. Yet years of attacks by corporate America and unfavorable rulings by the Supreme Court have left its future uncertain. In this book, Brian T. Fitzpatrick

makes the case for the importance of class action litigation from a surprising political perspective: an unabashedly conservative point of view. Conservatives have opposed class actions in recent years, but Fitzpatrick argues that they should see such litigation not as a danger to the economy, but as a form of private enforcement of the law. He starts from the premise that all of us, conservatives and libertarians included, believe that markets need at least some rules to thrive, from laws that enforce contracts to laws that prevent companies from committing fraud. He also reminds us that conservatives consider the private sector to be superior to the government in most areas. And the relatively little-discussed intersection of those two beliefs is where the benefits of class action lawsuits become clear: when corporations commit misdeeds, class action lawsuits enlist the private sector to intervene, resulting in a smaller role for the government, lower taxes, and, ultimately, more effective solutions. Offering a novel argument that will surprise partisans on all sides, *The Conservative Case for Class Actions* is sure to breathe new life into this long-running debate.

When purchasing your vehicle, you should probably expect to be lied to by everyone from the sales department to the financial department. Apples, Oranges, and Lemons is a one-of-a-kind, tell-all book about the automobile trade that reveals inside secrets they don't want you to know. There is no other book like it. It is written by the only person who could, or would. Phillip James Grismer knows the automobile industry from the inside out. He first apprenticed in a number of import auto shops, eventually rising through the ranks and opening his own facility. Grismer

draws on his thirty-seven years of experience to expose how the industry really works. He provides answers on how to deal with a "lemon" while offering advice on how to make the best buy before purchasing your vehicle. Discover how the valuation and appraisal process works and how the history of your vehicle affects you and your money. Grismer's conversational style makes the information accessible while offering personal insight on the process of vehicle manufacturing and servicing. Even the most casual reader will be enlightened and entertained by the inner workings of the automobile manufacturing, sales, and service industry. But most importantly, this handy reference guide empowers the consumer to make well-informed decisions about vehicles.

"The automotive maven and former Member of Parliament might be the most trusted man in Canada, an inverse relationship to the people he writes about." - *The Globe and Mail* Lemon-Aid shows car and truck buyers how to pick the cheapest and most reliable vehicles from the past 30 years of auto production. This brand-new edition of the bestselling guide contains updated information on secret service bulletins that can save you money. Phil describes sales and service scams, lists which vehicles are factory goofs, and sets out the prices you should pay. As Canada's automotive "Dr. Phil" for over 40 years, Edmonston pulls no punches. His Lemon-Aid is more potent and provocative than ever.
