ADVANCED TRADING TECHNIQUES FOR MAKING HIGH PROFITS

John Wiley & Sons

Advancing Point and Figure in the 21st Century Point and Figure has been around for over 130 years and the method is just as essential for chart analysis today as it always has been. While the basic principles of the technique have remained unchanged, those working with Point and Figure must still push the boundaries of how it is used, looking to make it even more insightful and powerful. This is exactly what Jeremy du Plessis has achieved with 21st Century Point and Figure. Previously, it was thought that the lack of time on Point and Figure charts meant that time-based tools and

indicators could not be used, and lack of volume meant that the importance of individual columns could not be determined. Jeremy du Plessis shows definitively that neither is the case and that with the use of lateral thinking there are also a host of other new techniques that can be added to Point and Figure charts and analysis. In this advanced practical guide, du Plessis explains: - How to use moving averages, Bollinger bands, Donchian channels and parabolic stop and reverse with Point and Figure charts. - How time-based indicators such as overbought/oversold, RSI, directional movement and MACD can be used with Point and Figure charts. - How column volume can be used to assess a column's strength and how volume at box level can be used to assess support and resistance areas. - How traditional accumulation distribution lines, such as on-balance volume and volume-price trend, can be used to enhance the reading of the chart. - How the analysis of relative strength and spreads can be enhanced using these new techniques. - Two new Point and Figure based market breadth indicators. Finally, he introduces a new Point and Figure based oscillator that can also be used on time-based charts. All topics are illustrated with numerous high-quality, full colour charts and observations from years of trading experience. The techniques described here open up a whole world of new and advanced analysis tools. You will see that there is more to Point and Figure than you ever imagined, and that it is more flexible than has ever been realised before. If you employ Point and Figure analysis, ensure you don't miss out on these powerful new techniques - be sure to bring your analysis into the 21st century.

TRADING THE MARKETS THE POINT & FIGURE WAY

Ziff Davis Press

To invest successfully or trade in Stocks, Options, Forex, or even Mutual Funds, it is imperative to know AND understand price and market movements that can only be learned from Technical Analysis. You should NEVER attempt Trading or Investing without it! My 25 years experience has taught me that 'Every book on the market' regarding Charting and Technical Analysis are seemingly worthless! All seem to find yet another creative way to tell you to "Buy Low and Sell High!" And they offer NO in-depth understanding or analysis about WHO is buying and WHO is selling, and when. Point is, anyone, experienced or not, can show you a picture of a Chart and tell you to buy at the bottom and sell at the top. That is simple 'hindsight', and is always 20/20! This book is different! It is IN-DEPTH - EXPLAINED and you WILL learn price movements and technical analysis from this information! You will understand and recognize tops and bottoms in the market and in particular stocks, AS they are forming. This is highly valuable information, and you should NEVER attempt to trade or invest without this knowledge! Mutual Funds? Most people think they do not need this information because they have a Mutual Fund. That could not be farther from the truth. Investing your hard-earned money should be done with your own knowledge of market direction, when to buy, and when to move your money to safety. Without this knowledge you are at the mercy of a salesperson hungry to earn a commission. Thus, invariably entering the market at the wrong time and in the wrong investment. No one else has your best interest in mind, either learn to protect your money or keep it in the bank. It's that simple. The next move is yours.

Technical analysis is defined as the tracking and prediction of asset price movements using charts and graphs in combination with various mathematical and statistical methods. More precisely, it is the quantitative criteria used in predicting the relative strength of buying and selling forces within a market to determine what to buy, what to sell, and when to execute trades. This book introduces simple technical analysis tools like moving

averages and Bollinger bands, and also advanced techniques such as wavelets and empirical mode decomposition. It first discusses some traditional tools in technical analysis, such as trend, trend Line, trend channel, Gann's Theory, moving averages, and Bollinger bands. It then introduces a recent indicator developed for stock market and two recent techniques used in the technical analysis field: wavelets and the empirical mode decomposition in financial time series. The book also discusses the theory to test the performance of the indicators and introduces the MATLAB Financial Toolbox, some of the functions/codes of which are used in our numerical experiments.
