This manual has been developed for use in both non-majors and combined courses in historical geology. The exercises emphasize the principles and methods by which geologists discover the origins and changing nature of our planet. These exercises or "studies" will help students understand how ancient conditions can be read from |

rocks and fossils, how geologic forces at the surface and within the planet can alter the environment, and how events of the past can be placed within an integrated chronological sequence. The exercises are designed for students who may not intend to specialize in geology. This does not mean, however, that the treatment is superficial, nor that it cannot give adequate preparation

for students pursuing an academic major in the earth sciences.

Earth Science Lab Manual UM Libraries "Earth Science opens with the Big Bang and then introduces basic plate tectonics, so students immediately experience the "action" of the Earth as a system. Learning objectives are identified at the beginning of each chapter and assessed at the end through

questions that range from simple review to thought-provoking applications. Additionally, every chapter contains "How Can I Explain" features, which provide simple, hands-on projects that illustrate a key concept. The text's narrative art program explains earth science concepts by breaking down processes into a series of steps. Brief annotations embedded throughout the figures explain each phase.

Features such as "What a Scientist Sees," "Science Toolbox," "A Deeper Look," "How Can I Explain," and "Putting Earth Science to Use," present real-world photos alongside drawings that simplify and amplify visual information, while "See For Yourself" features identify sample sites in Google Earth. Throughout, the authors' narrative approach to the content and innovative integration of new visual and interactive resources guides students to a clearer, more applicable understanding of the entire Earth System"--*The Educational Software Selector Real Science-4-Kids The Focus On Middle School Geology Laboratory Workbook* accompanies the Focus On Middle School Geology Student Textbook. The Laboratory Workbook has 10 hands-on geology experiments that include observing geological features in the local area, map making and using a compass to find a hidden treasure, testing minerals, making a model of Earth, exploring plate tectonics, observing cloud formation, performing permeability tests and making a model aquifer, exploring the local biome, making a compass and

finding the North Magnetic Pole, and problem solving using the concepts of Earth system science. The Focus On Middle School Geology Laboratory Workbook contains 10 black and white chapters. Grades 5-8.
