Editions Mardaga

Commemorates the 25th
anniversary of the Centre
de Recherches

Mathematiques (CRM) - a
national institute for
research in the
mathematical sciences in
Canada. This title includes
contributions by scientists
who have been closely
involved with the CRM. It
covers various topics in
pure and applied
mathematics, statistics,
and mathematical

biology.

The problems are

systematically arranged to reveal the evolution of concepts and ideas of the subject. Includes various levels of problems - some are easy and straightforward, while others are more challenging. All problems are elegantly solved.

The 33rd Bernoulli Society Conference on Stochastic Processes and Their Applications was held in Berlin from July 27 to July 31, 2009. It brought together more than 600 researchers from 49

countries to discuss recent progress in the mathematical research related to stochastic processes, with applications ranging from biology to statistical mechanics, finance and climatology. This book collects survey articles highlighting new trends and focal points in the area written by plenary speakers of the conference, all of them outstanding international experts. A particular aim of this collection is to inspire young scientists to pursue research goals in

the wide range of fields represented in this volume.

Practical French Grammar and Exercises

En este libro la autora estudia la labor que los artistas dedicaron a la escenografía de la danza durante la Edad de Plata española, desde la llegada de los Ballets Russes de Diaghilev hasta el estallido de la Guerra Civil. Se analizan así las trayectorias de los artistas, las colaboraciones con

bailarines e intelectuales, el contexto cultural e histórico y la producción artística de los protagonistas más destacados.

 Liszt's Final Decade reveals in the composer's own words to his confidantes Carolyne von Sayn-Wittgenstein and

Olga von Meyendorff how he resolved his conflicted self-image as a celebrated performer but underappreciated composer.

The primary objective of this monograph is to develop an elementary and self-contained approach to the mathematical theory of a viscoelastic incompressible fluid in a domain Ω of the Euclidean space \mathbb{R}^n , described by the equations of Navier-Stokes. The book is mainly directed to

students familiar with basic functional analytic tools in Hilbert and Banach spaces. However, for readers' convenience, in the first two chapters we collect, without proof some fundamental properties of Sobolev spaces, distributions, operators, etc. Another important objective is to formulate the theory for a completely general domain Ω . In particular, the theory applies to arbitrary unbounded, non-smooth domains. For this reason, in the nonlinear case, we have to restrict

ourselves to space dimensions $n=2,3$ that are also most significant from the physical point of view. For mathematical generality, we will develop the linearized theory for all $n \geq 2$. Although the functional-analytic approach developed here is, in principle, known to specialists, its systematic treatment is not available, and even the diverse aspects available are spread out in the literature. However, the literature is very wide, and I did not even try to include a full

list of related papers, also because this could be confusing for the student. In this regard, I would like to apologize for not quoting all the works that, directly or indirectly, have inspired this monograph.
